A Comparative Guide to the Western States’ Public Trust Doctrines: Public Values, Private Rights, and the Evolution Toward an Ecological Public Trust

Robin Kundis Craig*

This companion Article to the fall 2007 A Comparative Guide to the Eastern Public Trust Doctrines explores the state public trust doctrines—emphasis on the plural—in the nineteen western states. In so doing, this Article seeks to make the larger point that, while the broad contours of the public trust doctrine have a federal law basis, especially regarding state ownership of the beds and banks of navigable waters, the details of how public trust principles actually apply vary considerably from state to state. Public trust law, in other words, is very much a species of state common law. Moreover, as with other forms of common law, states have evolved their public trust doctrines in light of the particular histories and the perceived needs and problems of each state.

This Article observes that, in the West, four factors have been most important in the evolution of state public trust doctrines: (1) the severing of water rights from real property ownership and the riparian rights doctrine; (2) subsequent state declarations of public ownership of fresh water; (3) clear and explicit perceptions of the scarcity of water and the importance of submerged lands and environmental amenities; and (4) a willingness to consider water and other environmental issues to be of constitutional importance and/or to incorporate broad public trust mandates into statutes. From these factors, two important trends in western states’ public trust doctrines have emerged: (1) the extension of public rights based on states’ ownership of the water itself; and (2) an increasing, and still cutting-edge, expansion of public trust concepts into ecological public trust doctrines that are increasingly protecting species, ecosystems, and the public values that they provide.

INTRODUCTION

In the arid West, balancing private needs for fresh water to consume against the public values—recreational, aesthetic, and ecological—served by leaving fresh water in situ has tended to favor the private use side. Evidence of this result is both massive and minor, ranging from California’s multi-billion-dollar water transportation system,\(^1\) to the routine de-watering of the Colorado River so that little to no water reaches the Sea of Cortez,\(^2\) to water-related Endangered Species Act lawsuits in dozens of watersheds.\(^3\)

One of the legal tools that can re-balance private and public rights in water in any particular state is that state’s public trust doctrine. In 1970, Professor Joseph Sax published his seminal article arguing for revitalization of the public trust doctrine,\(^4\) and, ever since, academics, politicians, voters, and judges have been exploring the potential value of the public trust doctrine for protecting public values in water, including recreational and ecological values.\(^5\)

This Article is the second of two that explore what states are actually doing with their public trust doctrines—emphasis on the plural. As I argued in the first article,\(^6\) which covered the thirty-one eastern states’ public trust doctrines, the states have progressed and diverged in interesting ways beyond

---

3. Craig, supra note 2, at 875–78.
the precepts of the U.S. Supreme Court's seminal discussion of the public trust doctrine in *Illinois Central Railroad Co. v. Illinois.*

In some ways, what was true for the eastern states is also true for the western states. A state's public trust doctrine outlines public and private rights in water and submerged lands by delineating five components of those rights: (1) the beds and banks of waters that are subject to state/public ownership; (2) the line or lines dividing private from public title in those submerged lands; (3) the waters subject to public use rights; (4) the line or lines in those waters that mark the limit of public use rights; and (5) the public uses that the doctrine will protect in the waters where the public has use rights.

In addition, prior discussions of western public trust doctrines are subject to the same two general limitations I discussed for the eastern public trust doctrines: "The first is a tendency to generalize all public trust law into a single doctrine. The second and opposite tendency is to view each state’s public trust doctrine as unique."

Nevertheless, public trust doctrine law in the western states can be differentiated from that in the eastern states in several respects. First, in the eastern states, coastal access, coastal development, and coastal rights have generally been of more pressing concern than public trust rights in fresh waters. Because of the timing of their statehood, many eastern states' public trust doctrines have been influenced in significant ways by the English "ebb-and-flow" tidal test of navigability for purposes of state title. In addition, many eastern states recognize different public/private title lines along the sea coasts and Great Lakes than they do in fresh water streams, rivers, and lakes and/or protect more extensive sets of public rights in the ocean and Great Lakes. In contrast, most western states became states *after* the U.S. Supreme Court had outlined most of its core principles regarding navigable waters, and far fewer of them are coastal states—only Alaska, California, Hawai‘i, Oregon, Texas, and Washington. Partially as a result of this timing and geographical reality, western states, in general, have paid far greater attention than eastern states to public rights in fresh waters.

In addition, western states are more arid than eastern states, resulting in a consciousness of the importance of fresh water that pervades many of these states' public trust doctrines. The Hundredth Meridian, which runs through North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, and Texas, is generally considered the "water divide" of the United States—east of that line, there is generally enough rainfall to support farming without irrigation; west of

9. Id. at 2–3.
10. Id. at 11–14.
11. Id. at 16–17.
the line, there generally is not. Survival in the west depends on access to water, and water is generally viewed as being in short supply. As will be discussed, this perception of shortage or potential shortage of fresh water has influenced the public trust doctrine in many western states.

Further, the western states use a different system of water law than the eastern states. Eastern states' water laws are founded on common-law riparianism, although many states have transitioned to regulated riparian systems. Riparianism incorporates notions of adjustable, correlative rights to water among riparian property owners, with a general expectation—couched originally in terms of a "natural flow" doctrine and more recently in terms of "reasonable use"—that there is enough water to both serve human needs and leave water in the natural system. In contrast, western states (with the notable exception of Hawai‘i) base their water law on prior appropriation, including states like California that retain limited riparian rights. Prior appropriation is based on the principle of "first in time, first in right" and acknowledges through its priority system that water supplies from a given source will sometimes—maybe often—be insufficient to meet all needs. Thus, prior appropriation as a legal system acknowledges that fresh water is in short supply. In practice, however, prior appropriation systems have allowed appropriators to drain streams and rivers dry, making obvious the loss of public values such as navigation, fishing and other recreation, aesthetics, species, biodiversity, water quality, ecological health, and, more recently, ecosystem services.

Finally, in almost all prior appropriation states, state water law includes a declaration, constitutional or statutory, that the state or the public owns the fresh water itself. Legally, these declarations dissociate control over the water from land ownership, including submerged land ownership. For public trust purposes, therefore, such declarations leave western states free to impress waters with public trust protections entirely independently of state ownership of the beds and banks of navigable waters, extending many state public trust doctrines to non-navigable waters.

All of these features of prior appropriation water law have become relevant to states' public trust doctrines in the West. Indeed, western public trust common law reflects conscious struggles, often lacking in the eastern states, regarding the legal relationship between private appropriative water rights, on the one hand, and public rights and values in water, on the other.

This Article explores these and other features of western states’ public trust doctrines, identifying broad categories of how these nineteen states have developed their common law regarding public rights in water. The Article is both classificatory and comparative, first identifying categories of trends among the western states and then comparing those approaches to demonstrate the different ways that their public trust doctrines have developed.

At the same time, this Article seeks to make the larger point that, while the broad contours of the public trust doctrine have a federal law basis, especially regarding state ownership of the beds and banks of navigable waters, the details of how public trust principles apply vary considerably from state to state. Public trust law, in other words, is very much a species of state common law. Moreover, as with other forms of common law, states have evolved their public trust doctrines in light of the particular histories and perceived needs and problems of each state. As Professors Robert Abrams and Noah Hall have observed more generally for all of water law, any given state’s public trust doctrine “evolves instrumentally in ways that support a society’s most pressing needs. The periods of greatest change in water law tend to be the ones where serious and protracted shortage or unsatisfied demand is felt in one or more key economic sectors.”

Therefore, it is perhaps unsurprising that more robust public trust doctrines have evolved in states such as Hawai‘i, California, and Montana where water- and environment-based tourism and recreation are important contributors to the states’ economies.

Part I of this Article provides a brief history of the public trust doctrine, including its development before the formation of the United States and emphasizing its public rights nature. Part II outlines the federal contours of state public trust doctrines, including the federal law of state title to navigable waters, the U.S. Supreme Court’s pronouncements regarding the public trust doctrine in *Illinois Central Railroad Co. v. Illinois*, and the Supreme Court’s further elaborations regarding states’ authority to define rights to and in water. Part III identifies and compares many of the trends in western states’ public trust doctrines, emphasizing moments when particular states’ courts and, less often, legislatures, acknowledge the evolving nature of public trust principles and the need to protect public values recognized to be in short and decreasing supply. The Article concludes with a short examination of the implications of state public trust doctrines as a form of common law, arguing against the utility of continuing to describe a single public trust “doctrine,” particularly as western states face unprecedented water supply pressures from climate change.

17. 146 U.S. 387 (1892).
I.  HISTORICAL VIEWS OF PUBLIC INTERESTS IN WATER

As many writers have explained in varying degrees of detail, the public trust doctrine has an extensive history dating back to Roman law. A short review of this history is useful to underscore the concern for the public interests in water that the public trust doctrine has always addressed.

As the U.S. Supreme Court has recognized, "navigable waters uniquely implicate sovereign interests." It has traced the protections for public rights in water to the Institutes of Justinian, which stated that "[r]ivers and ports are public; hence the right of fishing in a port, or in rivers are in common . . . ." Such principles also have a long history in English common law: "[t]he Magna Carta provided that the Crown would remove 'all fish-weirs . . . from the Thames and the Medway and throughout all England, except on the sea coast.'

The recognition of public interests and rights in waters has led to the division of title in navigable waters between the jus privatum and jus publicum. The jus privatum is the naked legal title to submerged lands, which may in fact end up in private ownership. However, private title to such lands generally excludes the difficult-to-alienate jus publicum, which protects public access to and rights to use navigable waters. The jus publicum may be protected legally

20. Id.

21. Id. (quoting INSTITUTES OF JUSTINIAN, Lib. II, Tit. I, § 2 (T. Cooper transl. 2d ed. 1841)).

22. "The special treatment of navigable waters in English law was recognized in Bracton's time. He stated that '[a]ll rivers and ports are public, so that the right to fish therein is common to all persons. The use of river banks, as of the river itself, is also public." Id. (quoting 2 H. BRACHTON, DE LEGIBUS ET CONSUETUDBIBUS ANGLIAE 40 (S. Thorne transl. 1968)).

23. Id. (quoting M. EVANS & R. JACK, SOURCES OF ENGLISH LEGAL AND CONSTITUTIONAL HISTORY 53 (1984), and citing Martin v. Waddell's Lessee, 41 U.S. 367, 410–13 (1842) ("tracing tidelands trusteeship back to Magna Carta").

in a number of ways. For example, in 1838, the U.S Supreme Court concluded that because

the Potomac river is a navigable stream, a part of the jus publicum, any obstruction to its navigation would, upon the most established principles, be what is declared by law to be a public nuisance. A public nuisance being the subject to criminal jurisdiction, the ordinary and regular proceeding at law is by indictment or information, by which the nuisance may be abated; and the person who caused it may be punished. If any particular individual shall have sustained special damage from the erection of it, he may maintain a private action for such special damage; because to that extent he has suffered beyond his portion of injury, in common with the community at large.26

Thus, according to the Court, the quintessential protection of the jus publicum is a public nuisance lawsuit, preferably brought by the states themselves. Private individuals may protect the jus publicum, but only to the extent that they have suffered unusual private damages.

Building on this history, the U.S. Supreme Court in 1892 adopted the New York courts' view that:

"The title to lands under tide waters, within the realm of England, were by the common law deemed to be vested in the king as a public trust, to subserve and protect the public right to use them as common highways for commerce, trade, and intercourse. The king, by virtue of his proprietary interest, could grant the soil so that it should become private property, but his grant was subject to the paramount right of public use of navigable waters, which he could neither destroy nor abridge. . . .

"The principle of the common law to which we have adverted is founded upon the most obvious principles of public policy. The sea and navigable rivers are natural highways, and any obstruction to the common right, or exclusive appropriation of their use, is injurious to commerce, and, if permitted at the will of the sovereign, would be very likely to end in materially crippling, if not destroying, it. The laws of most nations have sedulously guarded the public use of navigable waters within their limits against infringement, subjecting it only to such regulation by the state, in the interest of the public, as is deemed consistent with the preservation of the public right."27

27. Ill. Cent. R.R., 146 U.S. at 458 (quoting People v. New York & S.I. Ferry Co., 68 N.Y. 71, 1877 WL 11834, at *3 (1877)); see also Shively, 152 U.S. at 11 ("By the common law, both the title and the dominion of the sea, and of rivers and arms of the sea, where the tide ebbs and flows, and of all the lands below high-water mark, within the jurisdiction of the crown of England, are in the king. Such waters, and the lands which they cover, either at all times, or at least when the tide is in, are incapable of ordinary and private occupation, cultivation, and improvement; and their natural and primary uses are public in their nature, for highways of navigation and commerce, domestic and foreign, and for the purpose of fishing by all the king's subjects. Therefore the title, jus privatum, in such lands, as of waste
Thus, as a matter of both public policy and international consensus, the Supreme Court early on connected the overall protection of public rights in navigable waters to the protection and promotion of commerce and economic growth.

Moreover, the federal government’s early conveyances of title to riparian properties in federal patents also reflect these public values. Grants of land bordering navigable streams generally conveyed title that extended only to the stream, which remained a “public highway.” Grants of land bordering rivers above tide-water conveyed exclusive right and title to the center of the stream, unless otherwise specified, but the public retained an easement or right of passage along navigable streams—waters navigable for “boats and rafts.” In other words, in the tidally influenced navigable waters, private landowners claiming title through federal patents had no property rights sufficient to interfere with public rights of commerce and navigation. Moreover, the U.S. Supreme Court extended this rule to federal patents of land bordering navigable-in-fact waters.

Thus, the Supreme Court has repeatedly recognized that protecting public rights in water, and limiting interfering private rights, promotes the overall well-being of the nation by promoting navigation, trade, and commerce. These and other public policy considerations remain relevant to the western states’ implementation of their public trust doctrines.

II. FEDERAL LAW COMPONENTS OF STATE PUBLIC TRUST DOCTRINES

As noted above, the U.S. Supreme Court has repeatedly emphasized that the submerged lands beneath navigable waters are subject to special considerations because of their connections to sovereignty. However, the sovereignty to which the Court usually refers, at least in the public trust context, is state sovereignty. In 1842, the Court declared that “when the [American] revolution took place, the people of each state became themselves sovereign; and in that character hold the absolute right to all their navigable lands, belongs to the king, as the sovereign; and the dominion thereof, jus publicum, is vested in him, as the representative of the nation and for the public benefit.”).

29. Id.
30. See, e.g., Barney v. City of Keokuk, 94 U.S. 324, 336 (1876) (stating as a general rule that private title to lands under navigable-in-fact waters extends only to the high-water mark); Shively, 152 U.S. at 11, 49-50 (adopting the English common law rule that federal conveyances go to the high-water mark). In the most generalized sense, waters are “navigable in fact” when they can actually be used for navigation, regardless of their immediate connection to the sea. Thus, in the United States, the adoption of a “navigable in fact” test reflected a need to move away from the English tidal test, where waters are deemed “navigable” only if they are subject to the ebb and flow of the tide. That said, however, defining “navigable in fact” has become a bit of an art in American water law, and several definitions potentially apply, depending on the regulatory context. For a taste of these complications, see infra notes 46–58 and the accompanying text.
waters, and the soils under them, for their own common use, subject only to the
rights since surrendered by the constitution to the general government." \(^{31}\)

The Supreme Court's most explicit articulation of the public trust doctrine is found in the 1892 case of *Illinois Central Railroad Co. v. Illinois*.\(^{32}\) The decision had the effect of reifying the doctrine's existence in American law while simultaneously adapting it to the particular conditions of the United States. Moreover, *Illinois Central Railroad* provided an apparent federal law basis for many later state pronouncements of their own public trust doctrines.

The legal basis—federal common law, federal constitutional law, or state law—for some aspects of the Court's pronouncements regarding the public trust doctrine, such as the alienability of public trust lands, is questionable.\(^{33}\) Such haziness of source, however, did not prevent many western states—particularly Arizona—from adopting the Supreme Court's statements as binding federal law. As Richard Lazarus has observed, "[s]tate courts have repeatedly turned to [federal pronouncements] in the late nineteenth and early twentieth centuries to justify rejecting or at least carefully scrutinizing shortsighted or even corrupt legislative attempts to convey into private hands critical coastal or inland waterway resources."\(^{34}\)

The states' implementations of their own public trust doctrines began with the assertion of state ownership of the beds and banks of navigable waters. In the context of title disputes between the federal and state governments (as opposed to title disputes between state governments and private landowners), the question of title to these beds and banks is clearly a matter of federal law.\(^{35}\) Western states such as Oregon and Utah played pivotal roles in developing the jurisprudence of "state title navigability," which uses one definition of "navigable waters" to determine whether a state has title to the beds and banks of—and hence control over—a given waterway,\(^{36}\) further evidencing the western states' interests in controlling their fresh waters.

The U.S. Supreme Court has made it clear that, once federal law has conferred title to the beds and banks of navigable waters on a particular state, that state has broad authority to redefine the property rights between itself and

---

33. See, e.g., Richard J. Lazarus, *supra* note 18, at 639–40 ("It is far from clear what source of law the Court was drawing upon to reach its result."); Appleby v. City of New York, 271 U.S. 364, 395 (1926) (stating that the alienability ruling in *Illinois Central* was based on state law).
34. Lazarus, *supra* note 18, at 640.
36. Definitions of "navigable waters" vary among legal contexts. For example, "navigable waters" are defined differently for: (1) state title purposes; (2) the federal Commerce Clause power; (3) federal jurisdiction under the federal Clean Water Act; (4) federal jurisdiction under the Rivers and Harbors Act; (5) federal jurisdiction under the Federal Power Act; and (6) admiralty and maritime jurisdiction. JOSEPH J. KALO ET AL., *COASTAL AND OCEAN LAW* 30 (3d ed. 2006).
its citizens. Similarly, the states have broad authority to define the public and private rights in navigable waters themselves.

A. State Ownership and Control of Submerged Lands

I. The Basic Rules

The original thirteen states acquired title to beds and banks underlying tidal and, as would later be confirmed, navigable-in-fact nontidal waters as a result of their conquest of England. All other states—including all of the western states—acquired ownership of the beds and banks of these waters upon their statehood as a result of the Equal Footing Doctrine, under which all subsequent states were admitted with the same rights as the original thirteen. A given state's title to tidal and navigable waters is fixed as of the date of its admission to the United States.

Under federal law, the default rule and strong presumption is that a state owns the beds of the navigable waters within its borders. Sovereign ownership of tidal waters—waters affected by the ebb and flow of the tide—arises as a direct adoption of English common law. Moreover, the U.S. Supreme Court clarified in 1988 that states own the beds of all tidal waters, whether or not those waters are navigable-in-fact. State title, however, is "subject always to the paramount right of Congress to control . . . navigation so far as may be necessary for the regulation of commerce with foreign nations and among the states."

In contrast, state ownership of non-tidal "navigable-in-fact" waters was a federal adaptation of English law to American realities. Thus, for example, the Great Lakes "possess all the general characteristics of open seas, except in the freshness of their waters, and in the absence of the ebb and flow of the tide," and hence "there is no reason or principle for the assertion of dominion and sovereignty over and ownership by the state of lands covered by tide waters that is not equally applicable to its ownership of and dominion and sovereignty over lands covered by the fresh waters of these lakes." Even earlier decisions of the U.S. Supreme Court had announced a "navigable-in-fact" test for inland rivers and streams. However, waters must be navigable-in-fact as of the date of the state's admission into the union.

2. The Federal Test of Navigability for Navigable-in-Fact Waters

As noted, state title to the beds and banks of navigable-in-fact waters is a question of federal law, determined in accordance with the federal test of navigability for state title. Nevertheless, the Supreme Court has not been uniformly consistent in how it defines "navigable" waters for these purposes. Under the classic test of navigability from The Daniel Ball, waters are navigable in fact when they are used, or are susceptible of being used, in their ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water. And they constitute navigable waters of the United States within the meaning of the acts of Congress, in contradistinction from the navigable waters of the States, when they form in their ordinary condition by themselves, or by uniting with other waters, a continued highway over which commerce is or may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water.

The Daniel Ball test thus closely aligns navigability with usefulness in interstate commerce, suggesting that waterways must be navigable by fairly large boats and ships.

47. See, e.g., The Daniel Ball, 77 U.S. (10 Wall.) 557, 563 (1870) (holding that the English common law tidal test has no applicability in the United States); Barney, 94 U.S. at 336 (stating that, "[i]n this country, as a general thing, all waters are deemed navigable which are really so").
49. Utah v. United States, 403 U.S. at 10 (quoting The Daniel Ball, 77 U.S. (10 Wall.) at 563).
50. See The Daniel Ball, 77 U.S. (10 Wall.) at 563; see also Utah v. United States, 403 U.S. at 10–11 (citing The Daniel Ball as the first important test of navigability for state title purposes and stating that that test applies to all waters, not just rivers).
However, the Supreme Court has also stated that a waterway is navigable when it is useful for trade, agriculture, or commerce by any kind of vessel. For example, in *The Montello*, the Court concluded:

It would be a narrow rule to hold that in this country, unless a river was capable of being navigated by steam or sail vessels, it could not be treated as a public highway. The capability of use by the public for purposes of transportation and commerce affords the true criterion of the navigability of a river, rather than the extent and manner of that use. If it be capable in its natural state of being used for purposes of commerce, no matter in what mode the commerce may be conducted, it is navigable in fact, and becomes in law a public river or highway. Vessels of any kind that can float upon the water, whether propelled by animal power, by the wind, or by the agency of steam, are, or may become, the mode by which a vast commerce can be conducted, and it would be a mischievous rule that would exclude either in determining the navigability of a river. It is not, however, as Chief Justice Shaw said, “every small creek in which a fishing skiff or gunning canoe can be made to float at high water which is deemed navigable, but, in order to give it the character of a navigable stream, it must be generally and commonly useful to some purpose of trade or agriculture.”

Moreover, in the course of adjudicating the navigability of waterbodies in western states, the Court has emphasized that the water need not be “part of a navigable or interstate or international commercial highway” in order for the state to take title to its bed.

Thus, depending on where a state court wants to focus its attention, the U.S. Supreme Court’s statements regarding navigability for state title purposes allow for both liberal and stringent approaches to claiming title and, as a consequence, asserting and protecting public rights. The Court itself, however, attempted to reconcile its various definitions of navigability in two cases from the 1930s involving allegedly navigable waters in Utah and Oregon. The 1931 Utah case resolved Utah’s claims of title to the submerged lands beneath the Green, Grand, and Colorado Rivers in Utah’s favor. The Court first reiterated that states received title to the submerged lands of navigable waters, while the federal government retained title to those beneath non-navigable waters, with the question of title navigability to be resolved by federal law. It then established a definition of navigability that attempts to unify prior definitions

---

54. *Id.* at 74. Given the last point, the Utah legislature’s declaration that the three rivers were navigable was of no binding effect. *Id.* at 75 n.6.
from *The Daniel Ball*, *The Montello*, and *Holt State Bank*. After reviewing previous holdings on navigability, the Utah Court explained that:

The extent of existing commerce is not the test. The evidence of actual use of streams, and especially of extensive and continued use for commercial purposes may be most persuasive, but, where conditions of exploration and settlement explain the infrequency or limited nature of such use, the susceptibility to use as a highway of commerce may still be satisfactorily proved.

As a result, the presence of sandbars that occasionally impeded navigation did not make the three rivers non-navigable because the rivers were still generally susceptible to use as channels of commerce.

Four years later, applying the same test, the Supreme Court determined that Lake Malheur, Mud Lake, Harney Lake, the Narrows, and Sand Reef in Oregon were *not* navigable. According to the Court’s findings:

Neither trade nor travel did then [at statehood] or at any time since has or could or can move over said Divisions, or any of them, in their natural and or ordinary conditions according to the customary modes of trade and travel over water; nor was any of them on February 14, 1859 [Oregon’s date of statehood] nor has any of them since been used or susceptible of being used in the natural or ordinary condition of any of them as permanent or other highways or channels for useful or other commerce.

In contrast, under the same consolidated federal test, the Great Salt Lake *was* navigable, and its beds owned by Utah, because of its use as a channel of commerce, despite its not being part of an interstate or international network.

---

55. United States v. Holt State Bank, 270 U.S. 49 (1926). In *Holt State Bank*, the U.S. Supreme Court determined the navigability of Mud Lake in Minnesota. After emphasizing that the lower courts erred in using a local state standard of navigability instead of a federal standard, *id.* at 55, the Court applied the federal navigability test from *The Montello*. Specifically, the Court stated that:

The rule long since approved by this court in applying the Constitution and laws of the United States is that streams or lakes which are navigable in fact must be regarded as navigable in law; that they are navigable in fact when they are used, or are susceptible of being used, in their natural and ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water; and further that navigability does not depend on the particular mode in which such use is or may be had—whether by steamboats, sailing vessels or flatboats—nor on an absence of occasional difficulties in navigation, but on the fact, if it be a fact, that the stream in its natural and ordinary condition affords a channel for useful commerce.

*Id.* at 56 (citing *The Montello*, 87 U.S. at 439).

56. United States v. Utah, 283 U.S. at 82.

57. *Id.* at 86.

3. **Exceptions to State Title in the Western States**

Although the presumption is that western states received title to the beds and banks of the navigable rivers within their borders, most western states existed as federal territories for some time before achieving statehood. As a result, state title in the West, far more than in the East, is subject to prior federal conveyances and reservations of title to navigable waters.

For example, when the federal government reserved navigable waters to some federal purpose before the date of statehood (or unappropriated waters even after statehood), those navigable waters remain in federal ownership. Many such reservations in the West benefit Indian tribes. For example, the Cherokee, Chickasaw, and Choctaw Nations own the bed under portions of the Arkansas River in Oklahoma, and the Osage Tribe owns the lands beneath the Arkansas River flowing along the Osage Indian Reservation. Similarly, the United States holds title to Coeur d'Alene Lake and the St. Joe River in Idaho in trust for the Coeur d'Alene Tribe.

Other reservations, however, serve other federal purposes. Thus, the State of Alaska did not receive title to any of the submerged lands within the boundary of the National Petroleum Reserve or the Arctic National Wildlife Refuge.

In addition, the federal government retains title to lands under some waters, especially coastal waters, as an aspect of its fundamental sovereignty. For example, Alaska does not have title to the submerged lands in the lower inlet of Cook Inlet because the state could not show a sufficient exercise of sovereignty historically to make these waters a “historic bay,” leaving title to the inlet in the federal government.

Finally, federal patents granted to private individuals before the date of statehood can affect both a state’s title to submerged lands and the application of the state’s public trust doctrine. For example, the U.S. Supreme Court has made clear that California cannot enforce any public trust easement over tidelands that the federal government conveyed to private individuals pursuant to the Act of 1851 if the federal patent makes no mention of a public easement.

---

Despite state ownership of the beds and banks of navigable waters, the federal government retains a paramount interest in maintaining navigation in the navigable waters. This interest is one of the most basic manifestations of the federal government’s Commerce Clause powers, but it can also serve to reinforce the public values in navigable waters protected by the public trust doctrine.

One aspect of this paramount federal navigation interest is the federal navigation servitude. The main import of the federal navigation servitude is that government actions to maintain navigation do not require the government to compensate private persons and entities for injuries to private property rights. For example, as early as 1829 the U.S. Supreme Court noted that

[1] [l]aws in relation to roads, bridges, rivers and other public highways, which do not take away private rights to property, may be passed at the discretion of the legislature, however much they may effect common rights; even private rights, if they are not those of property, may be taken away, if it be deemed necessary consequence of their construction, without making compensation.

Thus, with respect to navigation, public values can intrude upon private.

Another aspect of the navigation interest is the federal government’s continuing right to regulate interstate commerce. This right, while distinguishable from regulating navigation per se, nevertheless has substantial overlaps with navigation concerns. Moreover, under the Supremacy Clause, Congress’s regulation of interstate commerce in navigable waters will trump any conflicting state regulation.

Finally, in the context of water law, the federal government’s paramount interest in navigation may, in extreme cases, limit the rights of western appropriators to destroy public values in any waters that become navigable, even if they are not so at the point of diversion. In an 1899 case, the U.S. Supreme Court addressed the propriety of the complete diversion of the Rio Grande River in New Mexico, where it is not navigable. The Court concluded

69. The Supremacy Clause states:

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

U.S. CONST., art. VI, cl. 2.
that such upstream diversions could not interfere with the federal government's downstream interest in maintaining navigability, for two reasons:

First, . . . in the absence of specific authority from [Congress], a state cannot, by its legislation, destroy the right of the United States, as the owner of lands bordering on a stream, to the continued flow of its waters, so far, at least, as may be necessary for the beneficial uses of the government property; second, . . . it is limited by the superior power of the general government to secure the uninterrupted navigability of all navigable streams within the limits of the United States. In other words, the jurisdiction of the general government over interstate commerce and its natural highways vests in that government the right to take all needed measures to preserve the navigability of the navigable water courses of the country, even against any state action. 71

The Court has reaffirmed these potential limitations on the destruction of downstream navigability in subsequent cases. 72

B. The Supreme Court's Delineation of an American Public Trust Doctrine and the Limitations the Doctrine Imposes on States

The U.S. Supreme Court most clearly announced the existence of a public trust doctrine in American law in Illinois Central Railroad Co. v. Illinois. 74

According to that decision, a state holds title to submerged lands,

[b]ut it is a title different in character from that which the state holds in lands intended for sale . . . . It is a title held in trust for the people of the state, that they may enjoy the navigation of the waters, carry on commerce over them, and have liberty of fishing therein, freed from the obstruction or interference of private parties. 75

Thus, the three public uses of waters that a public trust doctrine generally protects are navigation, commerce, and fishing. 76

In addition, according to the Illinois Central Railroad Court, the doctrine acts as a restraint on the state's ability to alienate the beds and banks of

---

73. As discussed supra, the extent to which the U.S. Supreme Court based some of these limitations—especially the restraint on alienation—on federal law that could preempt state law is highly debatable. As a result, states vary in how “binding” they consider the Court’s articulations of public trust doctrine restraints, although most have followed Illinois Central Railroad’s restrictions.
76. Id.; see also Shively v. Bowby, 152 U.S. 1, 13 (1894) (emphasizing the public rights of fishing and navigation).
ECOLOGY LAW QUARTERLY

navigable waters or to abdicate regulatory control over those waters. The Court described the trust as essentially prohibiting a state from abdicating its general control over lands under navigable waters, such as by granting very large parcels to development interests: "The control of the state for the purposes of the trust can never be lost, except as to such parcels as are used in promoting the interests of the public therein, or can be disposed of without any substantial impairment of the public interest in the lands and waters remaining." This restraint on alienation—and its perception as a federal law requirement—has been important in several western states, notably Arizona.78

C. A Note on Federal Law, Prior Appropriation, and Non-Navigable Waters in the West

Both the U.S. Supreme Court and Congress have recognized that western states adopted prior appropriation as their dominant water law. In the Act of July 26, 1866, Congress began to formally recognize prior appropriation's ascendancy over riparian rights in the West.79 In the Desert Land Act of 1877,80 as interpreted by the Supreme Court, it both subjected non-navigable waters to prior appropriation and gave western states control over those waters.

The Desert Land Act applies to lands in California, Oregon, Nevada, Colorado, Washington, Idaho, Montana, Utah, Wyoming, Arizona, New Mexico, North Dakota, and South Dakota that were public at the time of enactment.81 In other words, it applies to all states discussed in this Article except Nebraska, Kansas, Oklahoma, Texas, Hawai'i, and Alaska. In the Act, Congress recognized that reclamation, large-scale development, and movement of fresh water would be necessary in order to settle the arid western lands.82 As a result, according to the Supreme Court, Congress both severed non-navigable waters from the public lands, ending common-law riparian rights,83 and gave control over water rights in those waters to the states.84

Thus, through the Desert Land Act and statutes like it, Congress allowed western states to assert ownership and control over non-navigable waters as well as navigable, even though the states did not own the beds and banks

78. See, e.g., Defenders of Wildlife v. Hull, 18 P.3d 722, 726-28 (Ariz. App. 2001) (relying on Illinois Central Railroad to conclude that the restraint on alienation of submerged lands is a common-law rule grounded in the Constitution that invalidates the Arizona legislature's attempts to disclaim or restrict state ownership of those lands).
79. Act of July 26, 1866, c. 262, § 9, 14 Stat. 251, 251.
82. Id. at 157-58.
83. Id.
84. Id. at 163-64; see also Cappaert v. United States, 426 U.S. 128, 139 n.5 (1976); Nebraska v. Wyoming, 325 U.S. 589, 612 (1945); Ickes v. Fox, 300 U.S. 82, 95-96 (1937) (all confirming the import of the Desert Land Act).
beneath those waters. As will be discussed in more detail, this ability to declare state ownership of all water has been an important component of many western states' public trust doctrines.

III. WESTERN STATES’ PUBLIC TRUST DOCTRINES: TRENDS AND APPROACHES TO PUBLIC RIGHTS IN WATER

In the western states, the Illinois Central Railroad Court's pronouncements regarding the public trust doctrine have generally been interpreted as defining the doctrine’s minimal applicability in terms of waters covered, uses protected, and restraints on state authority to eliminate the public trust. The courts in several western states—especially Arizona, Colorado, Idaho, Kansas, and Nebraska—have largely adhered to this “minimalist” public trust doctrine, while Nevada courts simply lack sufficient public trust statutes to have effected any state-law expansions of the doctrine.

The other thirteen western states, however, have added important state-law dimensions to the scope of the public trust doctrine as it operates within their respective borders. These states have used a variety of legal techniques to protect and expand public rights in the waters of each state: redefining “navigable” waters for state law purposes; expanding the list of protected public uses beyond navigation, fishing, and commerce; and extending public rights and public trust principles to all state waters, regardless of who owns the beds and banks.

More recently, several states have extended the concept of a public trust in waters to environmental protection—what this Article refers to as the “ecological public trust.” California and Hawai‘i have most extensively developed their ecological public trust doctrines, but nascent ecological public trusts are detectable in several other western states as well.

In addition, as a result of the variety of elements on which state law might operate—the definition of “navigable,” the uses protected, extensions to all water, and/or inclusion of ecological considerations—the western states’ public trust doctrines have become highly individualistic. Thus, the import of public trust principles is now largely a matter of state common law, sometimes supplemented by state statutes, rather than any kind of straightforward application of the U.S. Supreme Court’s statements from Illinois Central Railroad.

A. Adaptations of the Public Trust Doctrines to Particular State Circumstances and Public Policies

Courts and, to a lesser extent, legislatures in western states often clearly connect the state’s public trust doctrine to larger issues of state public policy. In states where these larger public policies include recognition of actual or potential loss of the public values of fresh water, more robust public trust
doctrines are often the result. In contrast, in states where public policies favor private rights, more restricted public trust doctrines have been the norm.

Arizona, for example, is an example of the latter kind of state—so much so that legislative attempts to restrict the state’s public trust doctrine have prompted repeated interventions by the Arizona courts. By statute, Arizona limits “navigable waters”—and its public trust doctrine—to those waters subject to the federal equal footing doctrine. In contrast, Hawai‘i courts are acutely aware of the scarcity of fresh water in the state and have subordinated private water rights to the public interest in preserving the state’s “natural bounty.”

States that seek to preserve the public interest in waters have used a variety of legal techniques for doing so. For example, the North Dakota Supreme Court adapted the state’s law regarding shifting rivers to protect the public rights in those rivers:

The Territorial Legislative Assembly recognized that our state would receive title to the beds of navigable waters at statehood. Accordingly, by 1877, it had enacted a code that would secure title of the state to such lands and modify common law so that the state’s title would follow the movement of the bed of the river. This accords with underlying public policy, since the purpose of a state holding title to a navigable riverbed is to foster the public’s right of navigation, traditionally the most important feature of the public trust doctrine. Moreover, it seems to use that other important aspects of the state’s public interest, such as bathing, swimming, recreation, and fishing, as well as irrigation, industrial and other water supplies, are most closely associated with where the water is in the new riverbed, not the old.

To address a different threat to public rights in waters, the Oklahoma Supreme Court has distinguished navigability for title purposes from navigability for public use purposes. Using a pleasure boat test of navigability, it protects its smaller rivers and the recreational and aesthetic amenities that

86. As such, a “navigable watercourse” for purposes of both state title and the application of the public trust doctrine is a watercourse that was in existence on February 14, 1912, and at that time was used or was susceptible to being used, in its ordinary and natural condition, as a highway for commerce, over which trade and travel were or could have been conducted in the customary modes of trade and travel on water. Ariz. Rev. Stat. § 37-1130(5) (LexisNexis 2009). “Public trust lands” are limited to the beds of these navigable watercourses. Id. § 37-1130(8).
they provide. It found, for instance, "that the Kiamichi River is one of the beautiful streams of southeastern Oklahoma that has for many years been known as one of the best fishing streams in the State and used by the public for fishing, recreation, and pleasure" and extended legal protections to those public uses and values. 89

More extensively, courts in California have explicitly and repeatedly emphasized that lands beneath nontidal navigable waters "constitute a resource which is fast disappearing in California; they are of great importance for the ecology, and for the recreational needs of the residents of the state." 90 Moreover, the California Supreme Court considers the public trust doctrine to be adaptable and evolving, noting that "[t]he objective of the public trust has evolved in tandem with the changing public perception of the values and uses of waterways." 91 It recognizes that the trust traditionally protects navigation, commerce, and fishing, but also has expansively announced that public trust rights "have been held to include the right to fish, hunt, bathe, swim, to use for boating, and general recreation purposes the navigable waters of the state, and to use the bottom of the navigable waters for anchoring, standing, or other purposes." 92

The Texas courts, similarly, have noted that "[t]he purpose of the State maintaining title to the beds and waters of all navigable bodies is to protect the public’s interest in those scarce natural resources." 93 As such, "the State, as trustee, is entitled to regulate those waters and submerged lands to protect its citizens’ health and safety and to conserve natural resources." 94

Oregon has used a variety of legal mechanisms to acknowledge and protect the public interests in tidal and navigable-in-fact waters. Like in California, the Oregon courts view the state’s waters as a limited and precious resource:

The severe restriction on the power of the state as trustee to modify water resources is predicated not only upon the importance of the public use of such waters and lands, but upon the exhaustible and irreplaceable nature of

---

94. Id. (citing Goldsmith & Powell v. Texas, 159 S.W.2d 534, 535 (Tex. Civ. App. 1942)); see also Carruthers v. Terramar Beach Cmty. Improvement Ass’n, Inc., 645 S.W.2d 772, 774 (Tex. 1983) (“The waters of public navigable streams are held by the State in trust for the public, primarily for navigation purposes.” (citing Motl v. Boyd, 286 S.W. 458 (Tex. 1926))).
the resources and its fundamental importance to our society and our environment. These resources, after all, can only be spent once. Therefore, the law has historically and consistently recognized that rivers and estuaries once destroyed or diminished may never be restored to the public and, accordingly, has required the highest degree of protection from the public trustee.95

Thus, in applying the public trust doctrine, the Oregon courts have noted that “lands underlying navigable waters have been recognized as unique and limited resources and have been accorded special protection to insure their preservation for public water-related uses such as navigation, fishery and recreation.”96 As a result, “[u]nder the common law public trust doctrine, the public use of such waters could not be substantially modified except for water-related purposes.”97

Moreover, like Oklahoma,98 Oregon has refined its definition of navigability to reflect the physical realities and public policy priorities of the state. Thus, Oregon early on adopted a log floatation test for navigability because that rule

best accords with common sense and public convenience, for these rapid streams, penetrating deep into the mountains, are the only means by which timber can be brought from these rugged sections, without great labor and expense; and by their use large tracks of timber, otherwise too remote or difficult of access, can be rendered of great value, as the country shall grow and timber become scarce.99

Finally, unusually (but not uniquely)100 among states, Oregon has employed the doctrine of custom to ensure public access to dry sand beaches not protected by the public trust doctrine.101 As a result, the Oregon Supreme Court concluded that no taking of private property had occurred when the state denied landowners permits to build sea walls.102

Other states have also used some of these mechanisms to adapt the public trust doctrine to the particular public interests and policies of that state. For example, by statute, and for purposes of establishing public rights in waters, Alaska defines a “navigable water” to be:

---

96. Id. at 523.
97. Id.
98. See supra note 89 and accompanying text.
100. Because the public has long used the beaches of Hawai‘i, that use “has ripened into a customary right. Public policy, as interpreted by this court, favors extending to public use and ownership as much of Hawai‘i’s shoreline as is reasonably possible.” Hawaii County v. Sotomura, 517 P.2d 57, 61–62 (Haw. 1973) (citing Oregon ex rel. Thornton v. Hay, 462 P.2d 671 (Or. 1969)).
any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal, sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes . . . .

The public also has rights in “public waters,” which by statute include not only navigable waters, but also “all other water, whether inland or coastal, fresh or salt, that is reasonably suitable for public use and utility, habitat for fish and wildlife in which there is a public interest, or migration and spawning of fish in which there is a public interest . . . .” These definitions and public rights protections reflect Alaska’s unique environmental and cultural circumstances. Alaska, for example, is the only western state that explicitly identifies use of waters by seaplanes as an important public use to be protected by law. In addition, Alaska is a prime fishing state, and its statutory declarations of what constitute public waters give special consideration to the use of waters not just for fishing but also for spawning and migration, reflecting most obviously the peculiarities of salmon life cycles; salmon in Alaska are important to commercial fishermen, recreational fishers and the recreation industry, and Native Alaskans.

The public trust doctrines of Oregon and Washington similarly reflect the importance of salmon and shellfish, respectively, to those states’ citizens.

103. ALASKA STAT. ANN. § 38.05.965(13) (2004).
104. Id. § 38.05.965(18).
106. For example, Oregon’s public trust responsibilities have been applied to fishing regulation. As a result, statutes purporting to convey exclusive rights to fish in navigable waters violated the Privileges and Immunities Clause in the Oregon Constitution. Hume v. Rogue River Packing Co., 92 P. 1065, 1072-73 (Or. 1907); see also Johnson v. Hoy, 47 P.2d 252, 252 (Or. 1935) (holding that the Legislature cannot grant an exclusive right to fish for salmon). Nevertheless, because the state has jurisdiction over navigable waters, it can regulate fishing. Oregon v. Nielsen, 95 P. 720, 722 (Or. 1908); Antony v. Veatch, 220 P.2d 493, 498-99 (Or. 1950). Specifically, fishing methods can be enjoined if they interfere with the public’s common right of fishing. Radich v. Frederickson, 10 P.2d 352, 355 (Or. 1932); Johnson, 47 P.2d at 252.
107. “[I]n Washington, the public trust doctrine does not encompass the right to gather clams on private property” because shellfish rights follow title to the submerged lands. Washington v. Longshore, 982 P.2d 1191, 1195-96 (Wash. App. 1999), aff’d, 5 P.3d 1256, 1259-63 (Wash. 2000) (en banc); see also Wash. State Geoduck Harvest Ass’n v. Wash. State Dept. of Natural Res., 101 P.3d 891, 895 (Wash. App. 2004) (noting that shellfish are not typical wildlife in Washington because they are considered part of the land). However, state regulation of geoducks does not violate the public trust doctrine. Id.
B. Public Ownership of Submerged Lands, Public Ownership of Water, and Public Rights in Water

As discussed above, the U.S. Supreme Court has most explicitly connected public trust rights to navigable waters—that is, the waters in which the state owns the beds and banks. Thus, in what might be called the state-property-based view of public trust doctrines, public rights follow state title to submerged lands.

However, in the West, as noted, federal and state law both allow for—and most states have declared—state or public ownership of the fresh waters themselves, independent of ownership of submerged lands. This public aquatic property right provides these states with another property law basis upon which to recognize and expand public rights in water beyond those recognized in traditional concepts of the public trust doctrine, as articulated in *Illinois Central Railroad*. Thus, as was true for the eastern states, most western states have divorced public rights in waters from state or public ownership of the relevant submerged lands, although the western states generally rely on different legal mechanisms—such as state ownership of water—to do so.

Among the western states, Colorado and Idaho have most clearly adhered to the strict and limited traditional view of public rights in their public trust doctrines. Relying on the federal test of navigability, the Colorado Supreme Court has declared almost all streams in Colorado to be non-navigable: “the natural streams of this state are, in fact, nonnavigable within its territorial limits, and practically all of them have their sources within its own boundaries, and . . . no stream of any importance whose source is without those boundaries, flows into or through this state.” It then explicitly refused to follow the “modern trend” and allow public rights in non-navigable rivers based on state ownership of the water itself, concluding that the Colorado Constitution does not preserve public recreation rights in such waters. Instead, “[w]ithout permission, the public cannot use such waters for recreation.”

108. ALASKA CONST., art. VIII, § 13; ALASKA STAT. § 46.15.030 (2009); ARIZ. REV. STAT. § 45-141(A) (LexisNexis 2009); CAL. WATER CODE § 1201 (2009); COLO. CONST., art. XVI, § 5; HAW. CONST., art. XI, §§ 1, 7; KAN. STAT. ANN. § 82a-702 (2009); MONT. CONST., art. IX, § 3(3); NEB. CONST., art. XV, § 5; NEV. REV. STAT. § 533.025 (2008); N.M. CONST., art. XVI, § 2; N.M. STAT. § 72-1-1 (2009); N.D. CONST., art. XI, § 3; N.D. CENT. CODE § 61-01-01 (2009); OR. REV. STAT. §§ 537.010, 537.525 (2009); S.D. CODIFIED LAWS § 46-1-3 (2009); TEX. WATER CODE ANN. § 11.021(a) (Vernon 2009); UTAH CODE ANN. § 73-1-1 (2009); WASH. REV. CODE § 90.03.010 (2009); WYO. STAT. ANN. § 41-3-115(a) (2009).

109. Craig, supra note 6, at 14–16.

112. Id. at 1029; see also Hartman v. Tresise, 84 P. 685, 686–87 (Colo. 1905) (holding that public ownership of the water itself, as stated in the Colorado Constitution, does not create a public fishery in
In contrast, the Idaho courts until 1996 were following the western "modern trend," indicating that water and "proprietary rights to use water . . . are held subject to the public trust." In 1996, however, Idaho's legislature invalidated this line of cases, instead defining (and confining) the state's public trust doctrine by statute. These provisions declare that the public trust doctrine as it is applied in the state of Idaho is solely a limitation on the power of the state to alienate or encumber the title to the beds of navigable waters as defined in this chapter . . . . The public trust doctrine shall not be applied to any purpose other than as provided in this chapter, [especially not to] the appropriation or use of water, or the granting, transfer, administration, or adjudication of water or water rights . . . or any other procedure or law applicable to water rights in the state of Idaho [or to] the protection or exercise of private property rights within the state of Idaho.

Most other western states, however, have followed the "modern trend" that the Colorado Supreme Court rejected. For example, according to the Montana Supreme Court, "the public trust doctrine in Montana's Constitution grants public ownership in water not in beds and banks of streams," and "[a]ll waters are owned by the State for the use of its people." As a result, "the public has the right to use the water for recreational purposes and minimal use of underlying and adjoining real estate essential to enjoyment of its ownership in water," even if the bed and banks are privately owned. Nevertheless,
Montana statutes make it clear that appropriated water rights trump any other public interest in the waters, including environmental protections and public use rights.\textsuperscript{118}

New Mexico and North Dakota, similarly, have found constitutional and statutory declarations that waters are publicly owned relevant to their public trust doctrines. Thus, in 1947, the New Mexico Supreme Court declared that all waters are public waters until beneficially appropriated and that the public can thus use all waters for outside recreation, sports, and fishing.\textsuperscript{119} In 1976, North Dakota declared that the public trust doctrine extends broadly to management of the state’s water resources, requiring the State Engineer to determine “the potential effect of [a proposed] allocation of water on the present water supply and future needs of this State,” necessitating water resources planning.\textsuperscript{120}

More recently, the South Dakota Supreme Court decided to follow “modern trend” decisions in Idaho (now overruled by statute), Montana, New Mexico, Wyoming, Minnesota, North Dakota, and Iowa to open all waters in the state to public use.\textsuperscript{121} As a result, the South Dakota Water Resources Act, which governs allocation of appropriative water rights in the state, must now work in tandem with the public trust doctrine:

> [W]hile we regard the public trust doctrine and Water Resources Act as having shared principles, the Act does not supplant the scope of the public trust doctrine. The Water Resources Act evinces a legislative intent both to allocate and regulate water resources. In part, this Act codifies public trust principles. The first three sections of the Act embody the core principles of the public trust doctrine—"the people of the state have a paramount interest in the use of all the water of the state,” SDCL 46-1-1; “the state shall determine in what way the water of the state, both surface and underground, should be developed for the greatest public benefit,” SDCL 46-1-2; and “all water within the state is the property of the people of the state.” SDCL 46-1-3.\textsuperscript{122}

Moreover, when increased precipitation creates new lakes on private property, “the State of South Dakota retains the right to use, control, and develop the water in these lakes as a separate asset in trust for the public,” and the public trust doctrine applies independently of bed ownership.\textsuperscript{123} In summary, “all waters within South Dakota, not just those waters considered navigable under the federal test, are held in trust by the State for the public.”\textsuperscript{124}

\textsuperscript{118} MONT. CODE ANN. §§ 75-5-705, 75-7-104, 85-1-111 (2009).

\textsuperscript{123} Id.
\textsuperscript{124} Id. at 838–39.
Under Utah's statutes, waters are owned by the public, and the Utah Supreme Court has tied the need for public rights to water scarcity: water is "a scarce and essential resource in this area of the country" that "is indispensable to the welfare of all people; and the State must therefore assume the responsibility of allocating the use of water for the benefit and welfare of the people of the State as a whole." Thus:

Under this "doctrine of public ownership," the public owns state waters and has "an easement over the water regardless of who owns the water bed beneath." In granting this public this easement, "state policy recognizes an interest of the public in the use of state waters for recreational purposes." This court has enumerated the specific recreational rights that are within the easement's scope. They include "the right to float leisure craft, hunt, fish, and participate in any lawful activity when utilizing that water." Hence, bed ownership is irrelevant for the public's rights to use waters in the state. Moreover, "the scope of the public's easement in state waters provides the public the right to engage in all recreational activities that utilize the water and does not limit the public to activities that can be performed upon the water." As a result, "the public has the right to touch privately owned beds of state waters in ways incidental to all recreational rights provided for in the easement."

Finally, Wyoming, too, has extended public use rights to all waters based on its ownership of the water itself. According to the Wyoming Supreme Court, "the actual usability of the waters is alone the limit of the public's right to employ them." Except in federally navigable waters, "the exclusive control of waters is vested in the state," and hence "[i]t follows that the state may lay down and follow such criteria for cataloguing waters as navigable or nonnavigable, as it sees fit, and the state may also decide the ownership of submerged lands, irrespective of the navigable or nonnavigable character of the waters above them." As a result, state ownership of the waters themselves impresses those waters with a public trust. The public can float craft down any waters so usable, regardless of bed ownership, and can scrape bottom, disembark, and pull the craft over shoals. Moreover, members of the public

can hunt or fish while floating. However, public use rights do not give the public the right to wade or walk on privately owned streambeds.

C. The Emergence of Ecological Public Trust Doctrines in the West

As in eastern states, most western states have expanded the protected public rights in waters beyond the three acknowledged in Illinois Central Railroad—navigation, fishing, and commerce—to recreation and other public uses, including, in some states, aesthetics. Only Arizona (by statute) and Colorado (by case law) have intentionally limited public rights in waters,

135. Id. at 147.
136. Id. at 146.
137. Craig, supra note 6, at 17–19.
138. See, e.g., ALASKA STAT. ANN. § 38.05.965(13) (2004) (defining “navigable waters” to include waters that are usable for “floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes”); Marks v. Whitney, 491 P.2d 374, 380 (Cal. 1971) (noting that public trust rights “have been held to include the right to fish, hunt, bathe, swim, to use for boating, and general recreation purposes the navigable waters of the state, and to use the bottom of the navigable waters for Anchoring, standing, or other purposes”); In re Water Use Permit Applications, 9 P.3d 409, 448 (Haw. 2000) (recognizing broad public rights in its waters, noting that “the trust has traditionally preserved public rights of navigation, commerce, and fishing” but also mentioning “a wide range of recreational uses, including bathing, swimming, boating, and scenic viewing, as protected trust purposes”); Kootenai Envtl. Alliance, Inc. v. Panhandle Yacht Club, Inc., 671 P.2d 1085, 1092 (Idaho 1983) (acknowledging recreation as a public trust right); Kansas v. Akers, 140 P. 637, 640 (Kan. 1914) (protecting “the purposes for which [submerged land] has been used from time immemorial, viz; the common right of passage, of fishing, of the use of the waters for domestic, agricultural, and commercial purposes”); MONT. CODE ANN. §§ 23-2-301 to 23-2-322, 85-1-111, 85-1-112, 85-16-102, 87-2-305 (2009) (codifying public rights of recreation, fishing, and navigation; New Mexico ex rel. State Game Comm’n v. Red River Valley Co., 182 P.2d 421, 429–32 (N.M. 1947) (recognizing public rights of recreation, sports, and fishing); J.P. Furlong Enters., Inc. v. Sun Exploration & Prod. Co., 423 N.W.2d 130, 140 (N.D. 1988) (recognizing bathing, swimming, fishing, and irrigation as protected public interests); Curry v. Hill, 460 P.2d 933, 935–36 (Okla. 1969) (acknowledging that the public can have rights of boating, recreation, and fishing in waters that are not navigable under the federal title test); Morse v. Or. Div. of State Lands, 581 P.2d 520, 523 (Or. App. 1978), aff’d, 590 P.2d 709 (Or. 1979) (noting that public trust rights extend to recreation); Hillebrand v. Knapp, 274 N.W. 821, 822 (1937) (listing sailing, rowing, fishing, rowing, bathing, skating, taking water, and cutting ice as public uses); Diversion Lake Club v. Heath, 86 S.W.2d 441, 444 (Texas 1935) (noting that public rights include hunting, fishing, navigation, “and other lawful purposes”); JJNP Co. v. Utah, 655 P.2d 1133, 1137 (Utah 1982) (noting that public rights include “the right to float leisure craft, hunt, fish, and participate in any lawful activity when utilizing that water”); Willbour v. Gallagher, 462 P.2d 232, 239 & n.7 (Wash. 1969) (holding that in navigable waters, the public has rights of navigation, “fishing, boating, swimming, water skiing, and other related recreational rights”, which probably include boating, hunting, fishing, rowing, skating, cutting ice, water skiing, and skin diving); Day v. Armstrong, 362 P.2d 137, 145–47 (Wyo. 1961) (holding that the public can float craft down any waters so usable, regardless of bed ownership, and can scrape bottom, disembark, and pull the craft over shoals and can hunt or fish while floating).

139. ARIZ. REV. STAT. § 37-1130(9) (LexisNexis 2009).
140. The Colorado Supreme Court has declared most streams in Colorado non-navigable. Stockman v. Leddy, 129 P. 220, 222 (Colo. 1912), overruled on other grounds, Denver Ass’n for Retarded Children, Inc. v. School Dist. No. 1, 535 P.2d 200 (Colo. 1975). In a non-navigable river, title to the bed and banks belongs to the private landowner, giving the landowner exclusive control over the water and the right to exclude recreational users who would like to use the water for floating or fishing.
although neither Nebraska nor Nevada has yet fully developed its public trust law in this respect.

Such expanded public rights, however, still remain focused on public uses of waters—not on the ecological and ecosystem services values of aquatic and other ecosystems. Indeed, with the emergence of pervasive statutory environmental and natural resources law in the 1970s and 1980s, both federal and state, the need for broader public trust principles to protect ecological values seemed highly questionable. Thus, Richard Lazarus concluded in 1986 that the day of "final reckoning" for the doctrine is here, or soon will be, and reliance upon it is no longer in order . . . . [T]he law of standing, tort law, property law, administrative law, and the police power have all evolved in response to increased societal concern for and awareness of environmental and natural resources problems and are weaving a new and unified fabric for natural resources law. Whether these developments are viewed as totally independent of the doctrine or, alternatively, as somehow having subsumed the doctrine's principles does not matter. The conclusion is the same from either perspective: much of what the public trust doctrine offered in the past is now, at best, superfluous and, at worst, distracting and theoretically inconsistent with new notions of property and sovereignty developing in the current reworking of natural resources law.141

Nevertheless, scholars continue to assert the need for expanded public trust doctrines. For example, in 1991, Alison Rieser summarized the drive to broaden public trust concepts as follows:

Due largely to recent decisions of the California courts, the notion that the public has a right to expect certain lands and natural areas to retain their natural characteristics is finding its way into American law. Through interpretation and expansion of the common law public trust doctrine, state courts are identifying governmental duties to redefine existing private property rights where such rights may threaten the ecological value of natural areas. Courts have subjected to this special duty primarily properties associated with navigable waters. Litigants and state agencies, however, appear poised and willing to invoke the public trust doctrine with respect to a number of other resources unrelated to navigation. Several public trust commentators—including Professor Joseph Sax, the modern doctrine's earliest and most prominent proponent—either urge or foresee a continuing expansion in the doctrine's scope. Some predict that courts will eventually apply public trust protections to all waterbodies, as well as to such diverse resources as old growth forests, mountains, and wildlife.142

141. Lazarus, supra note 18, at 658.
More recently, Mary Christina Wood has argued for comprehensively expanded public trust concepts in American environmental and natural resources law to address emerging environmental crises and the impacts of climate change.143

Academic scholars’ continuing revisitations of the public trust doctrine suggest that the doctrine can provide remedies to perceived shortcomings in environmental law and policy. Indeed, two drivers for these returns are discernible in the literature. First, scholars often turn to the public trust doctrine when they conclude that statutory law has not, in fact, been sufficient to protect the full gamut of public interests in the environment.144 For example, in light of the acknowledged weaknesses in U.S. ocean and coastal law,145 scholars with interests in these areas have repeatedly suggested the public trust doctrine as a means of better protecting coastal and marine resources.146 Similarly, the public trust doctrine has been of interest to scholars promoting the relatively new—and hence statutorily slighted—conception of ecosystem services,
acknowledging that ecosystems provide economically valuable services to human beings.\textsuperscript{147}

Second, and more importantly, the articulation of a “public trust” encapsulates a more general values system for the environment and its ecosystems—an environmental ethos, if you will—that is longer-term in focus, more comprehensive in its considerations, and more willing to preserve purely public values than regulatory law. Wood, for example, has recently argued that there is a need for a fundamental paradigm shift in environmental and natural resources law and has focused on the public trust doctrine as her model because it is “the most compelling beacon for a fundamental and rapid paradigm shift towards sustainability.”\textsuperscript{148} Moreover, the public trust doctrine provides one well-grounded legal mechanism for re-balancing private and public rights in the environment, and scholars increasingly perceive such a rebalancing to be necessary.\textsuperscript{149} Thus, the legal recognition of a “public trust” provides both a rhetorically resonant articulation of the larger public interests in intact and functional ecosystems and a means of imposing broad duties on governments to act for the long-term preservation of ecosystems and other environmental values—what I have termed the ecological public trust.\textsuperscript{150}

In many ways, however, the western states have anticipated these scholarly calls for the expansion of public trust concepts to the environment generally. While California is widely acknowledged to have evolved its public trust doctrine into an ecological public trust (at least when navigable waters are affected), it is not alone. Hawai‘i has, if anything, an even broader ecological public trust doctrine than California, and other western states are more cautiously using public trust principles to expand the legally cognizable public values in the environment.

The emergence of these ecological public trust doctrines represents the leading edge of public trust common law. However, the ecological public trust doctrines are also highly individualistic, underscoring the need for scholars to

\textsuperscript{147} See, e.g., Patrick J. Connolly, Note, Saving Fish to Save the Bay: Public Trust Doctrine Protection for Menhaden’s Foundational Ecosystem Services in the Chesapeake Bay, 36 B.C. ENVTL. AFF. L. REV. 135 (2009); J.B. Ruhl & Salzman, supra note 5, at 223.

\textsuperscript{148} Wood, supra note 143, at 45.

\textsuperscript{149} See, e.g., Wood, supra note 24, at 117 (arguing that “thirty years of statutory law has produced an imbalanced picture in which public property rights are simply not in the equation,” but that “public trust law springs from the property realm and forces an adjustment of private property rights and expectation to protect the people’s property rights in common, vital assets”); see also Christine A. Klein, \textit{The New Nuisance: An Antidote to Wetland Loss, Sprawl, and Global Warming}, 48 B.C. L. REV. 1155, 1158–67 (2007) (in the context of a nuisance law article, tracing the “supersizing” of private property rights and the demonization of public rights, interests, and values in the environment in law, policy, and rhetoric to argue that public and private rights have become unbalanced in American culture and law).

\textsuperscript{150} Professor Wood has called this “Nature’s Trust.” Wood, supra note 143, at 65–84. In the second of her two articles on this subject, she has discussed in detail the governmental obligations to protect natural resources that she would impose through this expanded public trust. See Wood, supra note 24, at 93–116.
acknowledge public trust doctrines in the plural and to actively discern and compare the common law evolutions of those doctrines in and among particular states.

1. California

It is no accident that Rieser tied the conception of an ecological public trust to California. In the 1971 case of Marks v. Whitney, the California Supreme Court announced:

There is growing public recognition that one of the most important public uses of the tidelands—a use encompassed within the tidelands trust—is the preservation of those lands in their natural state, so that they may serve as ecological units for scientific study, as open space, and as environments which provide food and habitat for birds and marine life, and which favorably affect the scenery and climate of the area.\(^{151}\)

In connection with Lake Tahoe litigation, the court soon extended its recognition of ecological values to nontidal submerged lands as well, underscoring the human-created scarcity and fragility of these resources. It noted that “the [fresh water] shorezone has been reduced to a fraction of its original size in this state by the pressures of development. Such lands now cover less than one half of 1 percent of the state . . . .”\(^{152}\) Moreover,

The shorezone is a fragile and complex resource. It provides the environment necessary for the survival of numerous types of fish (including salmon, steelhead, and striped bass), birds (such as the endangered species: the bald eagle and the peregrine falcon), and many other species of wildlife and plants. These areas are ideally suited for scientific study, since they provide a gene pool for the preservation of biological diversity. In addition, the shorezone in its natural condition is essential to the maintenance of good water quality, and the vegetation acts as a buffer against floods and erosion.\(^{153}\)

Thus, the California public trust doctrine extends to “environmental . . . purposes.”\(^{154}\)

California courts have extended public trust concepts not just to aquatic wildlife habitat, but also to the wildlife itself,\(^{155}\) creating “two distinct public trust doctrines” in the state.\(^{156}\) Wildlife “are natural resources of inestimable

---

153. Id.
156. According to the California Supreme Court:

First is the common law doctrine, which involves the government’s “affirmative duty to take the public trust into account in the planning and allocation of water resources . . . .” The
value to the community as a whole. Their protection and preservation is a public interest that is now recognized in numerous state and federal statutory provisions," \(^{157}\) and those statutes generally define the contours of the public trust obligation regarding wildlife. \(^{158}\) Members of the general public can sue to enforce the wildlife public trust as well as the navigable water public trust, because the public trust doctrine "places a duty upon the government to protect those resources." \(^{159}\)

Within the navigable waters trust, moreover, public trust interests can extend California's authority and duties beyond the navigable waters. For example, "[t]he state's right to protect fish is not limited to navigable or otherwise public waters but extends to any waters where fish are habituated or accustomed to resort and through which the have the freedom of passage to and from the public fishing grounds of the state." \(^{160}\) Similarly, in *National Audubon Society v. Superior Court* (the "Mono Lake case"), \(^{161}\) the California Supreme Court determined that the public trust doctrine could restrict or require modifications in established water rights even in non-navigable tributaries of navigable waters. Withdrawals of water from Mono Lake's tributaries were imperiling "both the scenic beauty and the ecological values of Mono Lake . . . . ." \(^{162}\) As a result, the public trust doctrine required

\(^{162}\) *Id.* at 711.
modifications in the prior appropriation system. Specifically, "the public trust doctrine . . . protects navigable waters from harm caused by diversion of non-navigable tributaries," and "when the public trust doctrine clashes with the rule of priority, the rule of priority must yield."

Nevertheless, despite its reputation as the vanguard of the ecological public trust doctrine movement, California does limit the breadth of its doctrine. In particular, the National Audubon rule does not apply to water withdrawals from purely non-navigable waters in the absence of an effect on navigable waters. Similarly, the California courts have declined to extend the National Audubon doctrine to groundwater. Thus, despite having recognized a second, largely statutory, wildlife public trust doctrine, California maintains a connection between its ecological public trust doctrine and the traditional American source of public trust rights: state ownership of the beds and banks of navigable waters.

2. Hawai‘i

Like California, Hawai‘i recognizes two different public trust doctrines—in Hawai‘i's case, the navigable water public trust doctrine and a unique public trust growing out of Hawai‘i’s complex history and Native Hawaiian rights, known as the water resources public trust. Both have contributed to a broad ecological public trust perspective in the state that favors public rights over private.

The Hawai‘i water resources public trust doctrine has largely superseded the navigable waters public trust in the context of water rights and fresh waters. The Hawai‘i Supreme Court has noted that in the Kingdom of Hawai‘i, the right to water was reserved to the people for their common good in all land grants, and ownership of the water remained at all times in the people. This sovereign reservation imposed a public trust on the water itself, similar to but different from the navigable waters public trust doctrine.

---

163. Id. at 712, 727–28.
164. Id. at 721.
169. In re Water Use Permit Applications, 9 P.3d at 441; Robinson, 658 P.2d at 310 (noting that this sovereign interest was more than just a police power interest, “[t]he nature of this ownership is thus akin to the title held by all states in navigable waterways”).
Given the limited availability of fresh water resources in Hawai‘i, reassertion of this traditional water resources trust has been deemed critical, both as against assertions of riparian rights and in light of the Hawai‘i Water Code and water use permits. With respect to riparian rights:

The reassertion of dormant public interests in the diversion and application of Hawai‘i’s waters has become essential with the increasing scarcity of the resource and recognition of the public’s interests in the utilization and flow of these waters. . . . [W]hile there indeed exist relative usufructory rights among landowners, these rights can no longer be treated as though they are absolute and exclusive interests in the waters of our state. Instead, “underlying every private diversion and application there is, as there always has been, a superior public interest in this natural bounty.” Thus, the Hawai‘i Supreme Court has clearly re-balanced public and private interests in these scarce resources in favor of the public.

With respect to the Hawai‘i Water Code, “[t]he public trust in the water resources of this state, like the navigable waters trust, has its genesis in the common law. . . . The [State Water] Code does not evince any legislative intent to abolish the common law public trust doctrine. To the contrary, . . . the legislature appears to have engrafted the doctrine wholesale in the Code.” As a result, the Hawai‘i Water Code “does not supplant the protections of the public trust doctrine,” and “the public trust doctrine applies to all water resources without exception or distinction,” including ground waters.

As in California, Hawai‘i may “revisit prior diversions and allocations, even those made with due consideration of their effect on the public trust,” in implementing its water law. Moreover, the constitutional requirements of “protection” and “conservation,” the historical and continuing understanding of the trust as a guarantee of public rights, and the common reality of the “zero-sum” game between competing water uses demand that any balancing between public and private purposes begin with a presumption in favor of public use, access, and enjoyment . . .

As a result, the state water agency’s decisions in favor of private uses of water are subject to “higher scrutiny.” Finally, the state agency must consider the

171. Id. at 312.
172. In re Water Use Permit Applications, 9 P.3d at 443 (citations omitted).
173. Id. at 445.
174. Id. at 409, 452 (citations omitted).
175. Id. at 454.
176. Id.; see also In re Water Use Permit Applications, 93 P.3d 643, 650, 657 (Haw. 2004) (noting that “because water is a public trust resource and the public trust is a state constitutional doctrine, this court recognizes certain qualifications to the standard of review regarding the Water Commission’s decisions” and in effect imposes a burden on proposed users to justify their uses of water).
cumulative impacts of diversions and “implement reasonable measures to
mitigate this impact, including the use of alternative sources.”177

Importantly, according to the Hawai‘i Supreme Court, “the maintenance
of waters in their natural state constitutes a distinct ‘use’ under the water
resources trust.”178 Thus, this public trust doctrine encompasses ecological
protection and preservation. To underscore that point, in expounding the water
resources trust, the Hawai‘i Supreme Court explicitly has followed the
California Supreme Court’s decision in National Audubon Society.179

Unlike in California, however, both of Hawaii’s two water-based public
trusts are incorporated into the state’s much broader constitutional public trust
doctrine.180 The Hawai‘i Constitution provides that:

For the benefit of present and future generations, the State and its political
subdivisions shall conserve and protect Hawaii’s natural beauty and all
natural resources, including land, water, air, minerals and energy sources,
and shall promote the development and utilization of these resources in a
manner consistent with their conservation and in furtherance of the self-
sufficiency of the State. All public natural resources are held in trust by the
State for the benefit of the people.181

The Hawai‘i Supreme Court has indicated that these more general
constitutional public trust concepts extend to environmental and biodiversity
protection, such as regulation of the Palila, an endangered bird.182 In 2006,
moreover, it explicitly connected the constitutionally incorporated navigable
waters public trust doctrine to environmental protection when it held that the
doctrine applies to the Hawai‘i Department of Health’s implementation of the
federal Clean Water Act. Thus, when environmental groups asserted that the
Department violated the public trust doctrine by failing to prevent a developer
from violating state water quality standards for coastal waters, the court
concluded that state issuance of National Pollutant Discharge Elimination
System permits pursuant to the Clean Water Act are subject to the public trust
doctrine and that the Department must ensure that water quality measures are
actually being implemented.183

3. Other States

Other states besides California and Hawai‘i have incorporated public trust
principles into resource management and ecological conservation, although not

177. In re Water Use Permit Applications, 9 P.3d at 409, 455 (citations omitted).
178. Id. at 448.
179. Id. at 452 (adopting the reasoning of Nat’l Audubon Soc’y v. Superior Court, 658 P.2d 709
(Cal. 1983)).
181. HAW. CONST., art. XI, § 1.
183. Kelly, 140 P.3d at 1009, 1011.
so extensively. For example, according to the Alaska Supreme Court, "[t]he public trust doctrine provides that the State holds certain resources (such as wildlife, minerals, and water rights) in trust for public use and that government owes a fiduciary duty to maintain such resources for the common good of the public as beneficiary."¹⁸⁴ Moreover, while that court has made it clear that the navigable waters public trust doctrine per se does not extend to wildlife management, the state does have a duty under the Alaska Constitution to manage fish, wildlife, and water resources for the people’s benefit, “to guarantee the common citizen participation in wildlife harvest, and to divest the [government] of exclusive entitlement to those resources.”¹⁸⁵ Thus, according to the Alaska Supreme Court:

We have frequently compared the state’s duties as set forth in Article VIII to a trust-like relationship in which the state holds natural resources such as fish, wildlife, and water in “trust” for the benefit of all Alaskans. Instead of recognizing the creation of a public trust in these clauses per se, we have noted that “the common use clause was intended to engraft in our constitution certain trust principles guaranteeing access to the fish, wildlife, and water resources of the state.”¹⁸⁶

Nevertheless, in general, the State of Alaska cannot be liable in damages under the public trust doctrine for allowing the destruction of natural resources, such as when beetles destroy trees.¹⁸⁷

There are also indications from the Texas courts that fish and other aquatic life are subject to public trust principles. As far back as 1942, the Texas Civil Court of Appeals declared:

The waters of all natural streams of this State and all fish and other aquatic life contained in fresh water rivers, creeks, stream, and lakes or sloughs subject to overflow from rivers or other streams within the borders of this State, are declared to be the property of the State; and the Game, Fish and Oyster Commission has jurisdiction over and control over such rivers and aquatic life. The ownership is in trust for the people . . . , and pollution of streams and water courses is condemned . . . . The Constitution of Texas, Art. 16, § 59(a) . . . designates rivers and streams as natural resources,

¹⁸⁴. Baxley v. Alaska, 958 P.2d 422, 434 (Alaska 1998). Nevertheless, mining is not an activity protected by the public trust. Commercial uses protected under the Illinois Central Railroad decision are commerce in the sense of trade, traffic or transportation of goods over navigable waters, a meaning which does not include mining. Most importantly, a mining claim is not a “public use,” but rather an exclusive, depleting use of a non-renewable resource for public profit. We believe that even the most expansive interpretation of the scope of public trust easements would not include private mining enterprises.

declares that such belong to the State, and expressly invests the Legislature with the preservation and conservation of such resources.\textsuperscript{188}

In 2005, moreover, the court indicated that the public trust doctrine allows the state to “conserve natural resources.”\textsuperscript{189}

Washington has also flirted with applying some version of a public trust doctrine to wildlife, especially shellfish. For example, the Washington Court of Appeals has stated that the public trust doctrine applies to the Washington Department of Natural Resources’ regulation of shellfish, such as geoducks.\textsuperscript{190} Nevertheless, the Department’s regulation of the commercial geoduck harvest did not violate the public trust doctrine despite the public right to fish, because: (1) the state must “balance the protection of the public’s right to use resources on public land with the protection of the resources that enable these activities”; (2) the Department had not given up its control over the state’s geoduck resources; and (3) the regulation facilitated sustainable geoduck harvesting and natural regeneration of the resource, serving the public interest.\textsuperscript{191} These conclusions thus fairly clearly suggest that Washington is beginning to connect public trust principles to sustainable development.

Similarly to Washington, North Dakota has considered the role of the public trust doctrine with regard to more general ecological considerations but has nevertheless continued to confine the doctrine’s application to water resources. The North Dakota Supreme Court acknowledged as early as 1976 that “[i]t is evident that the Public Trust Doctrine is assuming an expanding role in environmental law.”\textsuperscript{192} The public trust doctrine does not prohibit all development, and hence the State Engineer can grant permits to drain wetlands, especially when he studied the consequences, imposed permit conditions, and was subject to a public interest requirement.\textsuperscript{193} Nevertheless, the public trust doctrine does limit the state’s discretionary authority “to allocate vital state resources,” as enunciated in Illinois Central Railroad.\textsuperscript{194} Nor is the doctrine restricted to conveyances of submerged lands; “[t]he State holds the navigable waters, as well as the lands beneath them, in trust for the public,” as provided in

\end{itemize}
the North Dakota Constitution and refined by statute. As a result, "protecting the integrity of the waters of the State is a valid exercise of the [North Dakota Water Commission's] duties," allowing it, for example, to control the drainage of a lake.

More general—but also more embryonic—discussions of an ecological public trust have also surfaced in South Dakota and Utah. The South Dakota Supreme Court has determined that the state's Environmental Protection Act embodies a broader public trust doctrine than the navigable waters public trust alone would allow. This Act "authoriz[es] legal action to protect 'the air, water and other natural resources and the public trust therein from pollution, impairment or destruction.'" Utah also appears to be extending its public trust doctrine to ecological protection, because, according to the Utah Supreme Court, "'[t]he 'public trust' doctrine ... protects the ecological integrity of public lands and their public recreational uses for the benefit of the public at large.'"

CONCLUSION

In contrast to the many discussions over the years seeking to accurately describe "the" public trust doctrine, this Article argues that the contemporary power of public trust concepts lies not in tracing their historical bases but rather in embracing their status as varying and evolving state common law. Like any other category of state common law, such as early landlord/tenant law, tort law, or contract law, state public trust doctrines both reflect historic concerns and public policies—specifically, the particular public concerns regarding water in particular locations of the United States—and provide the states with an "ability to adapt to emerging societal needs." State courts on both sides of the Hundredth Meridian have celebrated the flexible and evolutionary nature of their public trust doctrines, but scholars have been reluctant to embrace the rich mixture of approaches to balancing public and private rights in water and other natural resources that has emerged.

195. Id. at 461 (also noting that "[w]e believe that § 61-01-01, NDCC, expresses the Public Trust Doctrine.").
198. Id. (quoting S.D. CODIFIED LAWS § 34A-10-1 (1973)).
200. Wood, supra note 143, at 78.
The western states, ranging from Hawai‘i and California on one end of a complex spectrum to Arizona and Colorado on the other, provide a particularly instructive diversity of approaches to the recognition (or not) of public rights in, and the public values of, water and other aspects of the environment. In comparing the public trust doctrines of the western states, moreover, four factors emerge as most important in the evolution of state public trust doctrines. First, the severing of water rights from real property ownership and the riparian rights doctrine freed these states from one set of potentially confining private property rights. Second, subsequent state declarations of public ownership of fresh water allow western states’ public trust doctrines to operate independently of state title to submerged lands and federal pronouncements regarding “the” public trust doctrine. Third, perceptions of shortages of fresh water, submerged lands, and environmental amenities have prompted increased interest, compared to the East, in preserving the public values in these resources. Finally, the willingness of most western states to raise water and other environmental issues to constitutional status and/or to incorporate broad public trust mandates into statutes has encouraged their courts to evolve water-based public trust principles into expanding ecological public trust doctrines.

As the most recent cases demonstrate, and despite occasional limiting interventions by states legislatures (as in Idaho), the evolution of western state public trust doctrines is not slowing. Instead, in true common law fashion, state courts are using state public trust doctrines to respond to particular and emerging state needs—the loss of native species and critical need to protect coastal waters in Hawai‘i; profound conflicts between appropriators, species, and ecological values in California; and the perhaps climate-change driven appearance of new publicly usable water resources in South Dakota. While such evolutions and expansions complicate the identity—indeed, the very existence—of any unitary, national, perhaps Constitution-based public trust doctrine, they also provide place-based balancings of public and private needs and values in that most basic of natural resources—fresh water—that may better serve the long-term interests of the nation as a whole.
APPENDIX: SUMMARIES OF INDIVIDUAL STATE PUBLIC TRUST DOCTRINES

ALASKA

Date of Statehood: 1959

Water Law System: Prior appropriation

Alaska Constitution: Alaska has constitutionalized some of the access and use rights guaranteed by the public trust doctrine. Article VIII of the Alaska Constitution governs natural resources, including waters and submerged lands. Relevant provisions of this Article include:

- § 1: “It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest.”

- § 2: “The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.”

- § 3: “Wherever occurring in their natural state, fish, wildlife, and waters are reserved to the people for common use.”

- § 5: “The legislature may provide for facilities, improvements, and services to assure greater utilization, development, reclamation, and settlement of lands, and to assure fuller utilization and development of fisheries, wildlife, and waters.”

- § 6: “Lands and interests therein, including submerged and tidal lands, possessed or acquired by the State, and not used or intended exclusively for governmental purposes, constitute the state public domain. The legislature shall provide for the selection of lands granted to the State by the United States, and for the administration of the state public domain.”

- § 8: “The legislature may provide for the leasing of, and the issuance of permits for exploration of, any part of the public domain or interest therein, subject to reasonable concurrent uses. Leases and permits shall provide, among other conditions, for payment by the party at fault for damage or injury arising from noncompliance with terms governing concurrent use, and for forfeiture in the event of breach of conditions.”

- § 9: “Subject to the provisions of this section, the legislature may provide for the sale or grant of state lands, or interests therein, and establish sales procedures. All sales or grants shall contain such reservations to the State of all resources as may be required by Congress or the State and shall provide for access to these resources.”
Reservation of access shall not unnecessarily impair the owners' use, prevent the control of trespass, or preclude compensation for damages.

- § 13: "All surface and subsurface waters reserved to the people for common use, except mineral and medicinal waters, are subject to appropriation. Priority of appropriation shall give prior right. Except for public water supply, an appropriation of water shall be limited to stated purposes and subject to preferences among beneficial uses, concurrent or otherwise, as prescribed by law, and to the general reservation of fish and wildlife."

- § 14: "Free access to the navigable or public waters of the State, as defined by the legislature, shall not be denied any citizen of the United States or resident of the State, except that the legislature may by general law regulate and limit such access for other beneficial uses or public purposes."

- § 15: "No exclusive right or special privilege of fishery shall be created or authorized in the natural waters of the State. This section does not restrict the power of the State to limit entry into any fishery for purposes of resource conservation, to prevent economic distress among fishermen and those dependent upon them for a livelihood and to promote the efficient development of aquaculture in the State."

**Alaska Statutes:**

- **ALASKA STAT.** § 38.04.062: In general, "the state owns all submerged land underlying navigable water to which title passed to the state at the time the state achieved statehood under the equal footing doctrine" or under the federal Submerged Lands Act of 1953.203 The Commissioner must make a list of all waters deemed navigable or nonnavigable by state or federal agencies or courts, but "[w]ater not included on the lists . . . is not considered either navigable or nonnavigable until the commissioner has made a determination as to its navigability at the time the state achieved statehood."204 However, submerged lands that the state conveyed pursuant to state statute are not governed by this section.205 "Navigable water," for purposes of this statute, is "water that, at the time the state achieved statehood, was used, or was susceptible of being used, in its ordinary condition as a highway for commerce over which trade and travel were or could have been conducted in the customary modes of trade and travel on water; the use or

204. *Id.* § 38.04.062(b), (c), (d).
205. *Id.* § 38.04.062(f).
potential use does not need to have been without difficulty, extensive, or long and continuous . . . "\(^{206}\)

- **Alaska Stat. § 38.05.126:** This statute recognizes the public trust doctrine in Alaska, declaring that: (a) "[t]he people of the state have a constitutional right to free access to and use of the navigable or public water of the state"; (b) "that state holds and controls all navigable or public water in trust for the use of the people of the state"; (c) "[o]wnership of land bordering navigable or public water does not grant an exclusive right to the use of the water and a right of title to the land below the ordinary high water mark is subject to the rights of the people of the state to use and have access to the water for recreational purposes or other public purposes for which the water is used or capable of being used consistent with the public trust"; and (d) nothing in this statute "affect[s] or abridge[s] valid existing rights or create a right or privilege of the public to cross or enter private land."

- **Alaska Stat. § 38.05.127:** Before the state can sell, lease, grant, or otherwise dispose of lands adjacent to water, the Commissioner must determine whether the water is a navigable water, a public water, or neither. If the water is navigable or public, the state must "provide for the specific easements or rights-of-way necessary to ensure free access to and along the body of water, unless the commissioner finds that regulation or limiting access is necessary for other beneficial uses or public purposes."

- **Alaska Stat. § 38.05.128:** No person may obstruct a navigable water or interfere with others' use of that water unless authorized by state or federal law. "An unauthorized obstruction or interference is a public nuisance and is subject to abatement." Moreover, "[f]ree passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust," and "[f]ree passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water . . . ."

- **Alaska Stat. § 38.05.825:** "Unless the commissioner finds that the public interest in retaining state ownership of the land clearly outweighs the municipality's interest in obtaining the land, the commissioner shall convey to a municipality tide or submerged land requested by the municipality that is occupied or suitable for occupation and development," so long as the land is within or contiguous to the municipality and "use of the land would not unreasonably interfere with navigation or public access."

\(^{206}\) Id. § 38.04.062(g).
• ALASKA STAT. § 38.05.965: This statute defines “navigable water” for purposes other than state title and also distinguishes “navigable water” and “public water.” “Navigable water” is “any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal, sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes . . . .”207 “Public water” is “navigable water and all other water, whether inland or coastal, fresh or salt, that is reasonably suitable for public use and utility, habitat for fish and wildlife in which there is a public interest, or migration and spawning of fish in which there is a public interest . . . .”208 The statute also includes other definitions of relevance to the state public trust: “shoreland” is “land belonging to the state which is covered by nontidal water that is navigable under the laws of the United States up to ordinary high water mark”;
“submerged land” is “land covered by tidal water between the line of mean low water and seaward to a distance of three geographical miles or further as may hereafter be properly claimed by the state”;
and “tideland” is “land that is periodically covered by tidal water between the elevation of mean high water and mean low water . . . .”209

• ALASKA STAT. §§ 46.15.010–46.15.270: Alaska Water Use Act. “Wherever occurring in a natural state, the water is reserved to the people for common use and is subject to appropriation and beneficial use and to reservation of instream flows and levels of water, as provided in this chapter.”210 Reservations are allowed for fish.211 Appropriations are subject to a public interest review, which includes “the effect on fish and game resources and on public recreational opportunities” and “the effect upon access to navigable or public water.”212 Moreover, the Act allows reservations of water or instream flows to “protect . . . fish and wildlife habitat, migration, and propagation,” for “recreation and park purposes,” for “navigation and transportation purposes,” and for “sanitary and water quality purposes.”213

210. Id. § 46.15.030.
211. Id. § 46.15.035(c).
212. Id. § 46.15.080(b)(3), (8).
213. Id. § 46.15.145(a).
Definition of “Navigable Waters”:

By statute, Alaska has adopted the federal title definition of “navigable water” to identify the waters for which the state owns the bed and banks. Thus, “navigable water” for state title purposes is water that, at the time the state achieved statehood, was used, or was susceptible of being used, in its ordinary condition as a highway for commerce over which trade and travel were or could have been conducted in the customary modes of trade and travel on water; the use or potential use does not need to have been without difficulty, extensive, or long and continuous . . . .214

For other purposes, including public rights in waters, a “navigable water” is any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal, sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes . . . .215

In addition, the public has rights in “public waters,” which by statute include not only navigable waters but also “all other water, whether inland or coastal, fresh or salt, that is reasonably suitable for public use and utility, habitat for fish and wildlife in which there is a public interest, or migration and spawning of fish in which there is a public interest . . . .”216

Because of federal reservations, however, Alaska did not acquire title to the submerged lands within the boundary of the National Petroleum Reserve or the Arctic National Wildlife Refuge.217 Nor does Alaska hold title to the lower inlet of Cook Inlet.218

Rights in “Navigable Waters”:

In general, the state owns the beds of the navigable waters “up to the ordinary high-water mark.”219 However, the public has rights of access and use

214. Id. § 38.04.062(g).
215. Id. § 38.05.965(13).
216. Id. § 38.05.965(18).
219. Alaska Dep’t of Natural Res. v. Pankratz, 538 P.2d 984, 988 (Alaska 1975); see also Pankratz v. Alaska Dep’t of Highways, 652 P.2d 68, 73 (Alaska 1982) (noting that “it is clear that a state has title to land underlying navigable waters up to the mean high water mark”).
to both state-defined navigable and public waters, even if the landowner owns below the high-water mark.\textsuperscript{220}

In its case law regarding public uses, Alaska remains closely aligned with the principles set forth in \textit{Illinois Central Railroad}. For example, tidelands “are subject to the public’s right to use tidelands for navigation, commerce, and fishing.”\textsuperscript{221} However, by statute, Alaska deems state “navigable waters” to include waters that are usable for “floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes,”\textsuperscript{222} suggesting that these uses are also protected under the state public trust doctrine. No person may obstruct a navigable water or interfere with others’ use of that water unless authorized by state or federal law,\textsuperscript{223} and “[a]n unauthorized obstruction or interference is a public nuisance and is subject to abatement.”\textsuperscript{224} Moreover, “[f]ree passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust,” and “[f]ree passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water . . . .”\textsuperscript{225}

Also in line with \textit{Illinois Central Railroad}, conveyances of tidelands to private owners generally convey only “naked title,” and the tidelands remain subject to the public trust unless the conveyance meets the \textit{Illinois Central Railroad} criteria—“first, whether the conveyance was made in furtherance of some specific public trust purpose and, second, whether the conveyance can be made without substantial impairment of the public’s interest in state tidelands.”\textsuperscript{226} No such intent is present in § 38.05.820 of the Alaska statutes, especially in light of Article VIII, § 3 of the Alaska Constitution, so those conveyed tidelands remain subject to the public trust.\textsuperscript{227} Moreover, even conveyances of tidelands to municipalities pursuant to § 38.05.825 remain subject to the public trust; “[t]he conveyance transfer to the municipality the state’s right to use and manage the tidelands, but does not confer the right to sell of dispose of the lands or exempt them from the public trust doctrine.”\textsuperscript{228}

In terms of resource protection, “[t]he public trust doctrine provides that the State holds certain resources (such as wildlife, minerals, and water rights) in trust for public use and that government owes a fiduciary duty to maintain such

resources for the common good of the public as beneficiary." Nevertheless, mining is not an activity protected by the public trust. Commercial uses protected under the Illinois Central Railroad decision are commerce in the sense of trade, traffic or transportation of goods over navigable waters, a meaning which does not include mining. Most importantly, a mining claim is not a "public use," but rather an exclusive, depleting use of a non-renewable resource for public profit. We believe that even the most expansive interpretation of the scope of public trust easements would not include private mining enterprises.

The public trust doctrine per se does not extend to wildlife management, although the state does have a duty under Article VIII, § 3 of the Alaska Constitution to manage fish, wildlife, and water resources for the people's benefit, "to guarantee the common citizen participation in wildlife harvest, and to divest the [government] of exclusive entitlement to those resources." According to the Alaska Supreme Court:

We have frequently compared the state's duties as set forth in Article VIII to a trust-like relationship in which the state holds natural resources such as fish, wildlife, and water in "trust" for the benefit of all Alaskans. Instead of recognizing the creation of a public trust in these clauses per se, we have noted that "the common use clause was intended to engraft in our constitution certain trust principles guaranteeing access to the fish, wildlife, and water resources of the state."

Access rights are equal for both personal and professional fishing. However, in general, the state cannot be liable in damages under the public trust doctrine for allowing the destruction of natural resources, such as when beetles destroyed trees.

---

### ARIZONA

**Date of Statehood:** 1912

**Water Law System:** Prior appropriation

**Arizona Constitution:** Article XVII of the Arizona Constitution governs water rights. Relevant provisions include:

---

• § 1: “The common law doctrine of riparian water rights shall not obtain or be of any force or effect in the State.”

• § 2: “All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed.”

Arizona Statutes:

• ARIZ. REV. STAT. §§ 37-1130 to 37-1156: State Claims to Streambeds. These provisions establish the Arizona Navigable Stream Adjudication Commission, which acts as an advocate for the public trust.235 The Commission issues a determination of navigability after a public hearing and issues a report on the public trust values of any navigable stream or watercourse.236 Its determinations are subject to judicial review.237 A determination of non-navigability relinquishes the state’s claims to the bed and banks.238 The state can appropriate water “to maintain and protect public trust values,” but only by complying with the normal requirements for an appropriation.239 The statute also provides for refunds of taxes and purchase prices, and compensation for improvements to landowners who “lose” title to the beds of waters determined to be navigable.240 Finally, the statutes provide a petition process to release public trust status.241 In these provisions, “navigable watercourse” “means a watercourse that was in existence on February 14, 1912, and at that time was used or was susceptible to being used, in its ordinary and natural condition, as a highway for commerce, over which trade and travel were or could have been conducted in the customary modes of trade and travel on water.”242 The state generally owns the beds and banks of navigable watercourses to the ordinary high watermark.243 “Public trust land” is “the portion of the bed of a watercourse that is located in this state and that is determined to have been a navigable watercourse as of February 14, 1912. Public trust land does not include land held by this state pursuant to any other trust.”244 “Public trust purposes” and “public trust values” are “commerce, navigation, and fishing.”245

245. Id. § 37-1101(9).
"Watercourse" does not include man-made water conveyance systems.246

- **ARIZ. REV. STAT. §§ 45-101 to 45-343**: Department of Water Resources and Appropriation. "The waters of all sources, flowing in streams, canyons, ravines, or other natural channels, or in definite underground channels, whether perennial or intermittent, flood, waste or surplus water, and of lakes, ponds and springs on the surface, belong to the public and are subject to appropriation and beneficial use as provided in this chapter."247 Arizona's water law creates a hierarchy of the relative value of uses of water: (1) domestic and municipal; (2) irrigation and stock watering; (3) power and mining; (4) recreation and wildlife, including fish; and (5) nonrecoverable water storage.248 In the 1995 laws discussing these provisions, "the legislature declares that it does not intend to create an implication that the public trust doctrine applies to water rights in this state."249

**Definition of "Navigable Waters":**

By statute, Arizona limits "Navigable waters"—and its public trust doctrine—to those waters subject to the federal equal footing doctrine. As such, a navigable watercourse for purposes of both state title and the application of the public trust doctrine is

a watercourse that was in existence on February 14, 1912, and at that time was used or was susceptible to being used, in its ordinary and natural condition, as a highway for commerce, over which trade and travel were or could have been conducted in the customary modes of trade and travel on water.250

"Public trust lands" are limited to the beds of these navigable watercourses.251

The United States Supreme Court has repeatedly confirmed that the Colorado River in Arizona is navigable, and that Arizona owns the beds and banks of that river.252

251. *Id.* § 37-1101(8).
Rights in "Navigable Waters":

The state's title to the beds and banks of navigable waters, like the Colorado River, extends up to the ordinary high water mark. This line is defined by soil and vegetation, but is not "the line reached by the water in unusual floods." By statute, Arizona limits "public trust purposes" and "public trust values" to the three uses recognized in Illinois Central Railroad: commerce, navigation, and fishing. Moreover, while the state can appropriate water to promote these uses, it must follow the normal appropriation requirements and does not receive any preference in priority. However, the Arizona Court of Appeals recently emphasized in connection with the Central Arizona Water Conservation District that landowners take their properties subject to existing and initiated water rights, suggesting that the public trust doctrine can insulate the state from regulatory takings claims.

Like many western states, Arizona manages groundwater under a different regulatory regime—the Groundwater Management Act of 1980—than it manages surface water rights. The Arizona courts have determined that the state public trust doctrine does not apply to the Groundwater Management Act. As a result, the public trust doctrine cannot influence the establishment of rights to pump groundwater in Arizona.

Since 1987, Arizona's legislature has engaged in numerous efforts to restrict the public trust doctrine's application in the state, only to be thwarted repeatedly by the Arizona courts. The controversy began in 1985, when Arizona officials began asserting state ownership rights in the beds of the state's navigable waters based on the federal equal footing doctrine; until that time, the Colorado River had been the state's only equal footing/public trust claim. In 1987, the legislature responded with H.B. 2017, which attempted to relinquish most of Arizona's title claims through an "uncompensated quitclaim of the state's equal footing interest in all watercourses other than the Colorado, Gila, Salt, and Verde Rivers and in all lands formerly within those
rivers but outside their current beds.”\footnote{Arizona Ctr. for Law in the Public Interest v. Hassell, 837 P.2d 158, 162 (Ariz. Ct. App. 1991).} The Arizona Court of Appeals held many of the relevant provisions unconstitutional.\footnote{Id. at 173.} It declared that every future land patent includes the equal footing interest, that the standard of navigability is federal, and that navigability is established as of the date of statehood.\footnote{Id. at 163–65.} Relying on \textit{Illinois Central Railroad}, moreover, the Court of Appeals declared that “the state’s responsibility to administer its watercourse lands for the public benefit is an inabrogable attribute of statehood itself,” and “the state must administer its interest in lands subject to the public trust consistently with trust purposes.”\footnote{Id. at 168.} 

In 1995, the legislature amended Arizona’s water law to include a provision stating:

\begin{quote}
The public trust is not an element of a water right in an adjudication proceeding held pursuant to this article. In adjudicating attributes of water rights pursuant to this article, the court shall not make a determination as to whether public trust values are associated with any or all of the river system or resource.\footnote{ARiz. REV. STAT. § 45-263(B) (LexisNexis 2009).}
\end{quote}

The Arizona Supreme Court found these provisions unconstitutional.\footnote{San Carlos Apache Tribe v. Superior Court ex rel. County of Maricopa, 972 P.2d 179, 199 (Ariz. 1999).}

Finally, in 1998, after fact-finding by the Arizona Navigable Stream Adjudication Commission pursuant to 1994 amendments to Arizona’s water law, the Arizona legislature enacted S.B. 1126. This statute “disclaim[ed] the state’s ‘right, title, or interest based on navigability and the equal footing doctrine’ to the bed lands of the Agua Fria, New, Hassayampa, and Lower Salt Rivers, as well as Skunk Creek” and Verde River, based on an overly constricted definition of “navigable.”\footnote{Defenders of Wildlife v. Hull, 18 P.3d 722, 727 (Ariz. Ct. App. 2001).} The Arizona Court of Appeals found that S.B. 1126 violated both the gift clause in Arizona’s Constitution and the public trust doctrine.\footnote{Id. at 729.} Moreover, with respect to the public trust, the court held that the legislature had to apply the navigability test from \textit{The Daniel Ball},\footnote{The Daniel Ball, 77 U.S. (10 Wall.) 557 (1870).} to determine what qualified as a “navigable water,” and that the legislature had constructed a much more constrained test for navigability than the \textit{Daniel Ball} standard.\footnote{Id. at 730–37.} Because federal law under the equal footing doctrine presumes that the state has title to beds and banks of navigable waters, federal law preempted S.B. 1126.\footnote{Id. at 737.}
This litigation made clear that the Arizona courts view the public trust doctrine as a federal constitutional issue because the equal footing doctrine is grounded in the U.S. Constitution:\textsuperscript{272}

The public trust doctrine is a constitutional limitation on legislative power to give away resources held by the state in trust for its people. The Legislature cannot order the courts to make the doctrine inapplicable to these or any other proceedings. . . . It is for the courts to decide whether the public trust doctrine is applicable to the facts. The Legislature cannot by legislation destroy the constitutional limits on its authority.\textsuperscript{273}

As such, the state has a duty to assert its ownership interest in navigable or potentially navigable waters, and the courts will remand cases where the state has not done so.\textsuperscript{274} For example, estoppel may not be asserted to defeat the public interest in navigable waters.\textsuperscript{275}

**CALIFORNIA**

**Date of Statehood:** 1850

**Water Law System:** California Doctrine—mostly prior appropriation, but with recognition of some riparian rights

**California Constitution:** Several provisions of the California Constitution embody or are otherwise relevant to the state's public trust doctrine. Article X, for example, governs water, Article XA governs water resources development, and Article XB contains the Marine Resources Protection Act of 1990. Especially relevant provisions of these and other articles include:

- Art. I, § 25: “The people shall have the right to fish upon and from the public lands of the State and in the waters thereof, excepting upon lands set aside for fish hatcheries, and no land owned by the State shall ever be sold or transferred without reserving in the people the absolute right to fish thereupon; and no law shall ever be passed making it a crime for the people to enter upon the public lands within this State for the purpose of fishing in any water containing fish that have been planted therein by the State; provided, that the Legislature may by statute, provide for the season when and the conditions under which the different species of fish may be taken.”

- Art. X, § 1: “The right of eminent domain is hereby declared to exist in the State to all frontages on the navigable waters of this State.”

\textsuperscript{275} Id. at 1021.
Art. X, § 2: "It is hereby declared that because of the conditions prevailing in this State the general welfare requires that the water resources of the State be put to beneficial use to the fullest extent of which they are capable, and that the waste or unreasonable use or unreasonable method of use of water be prevented, and that the conservation of such waters is to be exercised with a view to the reasonable and beneficial use thereof in the interest of the people and for the public welfare. The right to water or to the use or flow of water in or from any natural stream or water course in this State is and shall be limited to such water as shall be reasonably required for the beneficial use to be served, and such right does not and shall not extend to the waste or unreasonable use or unreasonable method of use or unreasonable method of diversion of water. Riparian rights in a stream or water course attach to, but to no more than so much of the flow thereof as may be required or used consistently with this section, for the purposes for which such lands are, or may be made adaptable, in view of such reasonable and beneficial uses; provided, however, that nothing herein contained shall be construed as depriving any riparian owner of the reasonable use of water of the stream to which the owner's land is riparian under reasonable methods of diversion and use, or as depriving any appropriator of water to which the appropriator is lawfully entitled."

Art. X, § 3: "All tidelands within two miles of any incorporated city, city and county, or town in this State, and fronting on the water of any harbor, estuary, bay, or inlet used for the purposes of navigation, shall be withheld from grant or sale to private persons, partnerships, or corporations; provided, however, that any such tidelands, reserved to the State solely for street purposes, which the Legislature finds and declares are not used for navigation purposes and are not necessary for such purposes may be sold to any town, city, county, city and county, municipal corporations, private persons, partnerships or corporations subject to such conditions as the Legislature determines are necessary to be imposed in connection with any such sales in order to protect the public interest."

Art. X, § 4: "No individual, partnership, or corporation, claiming or possessing the frontage or tide lands of a harbor, bay, inlet, estuary, or other navigable water in this State, shall be permitted to exclude the right of way to such water whenever it is required for any public purpose, nor to destroy or obstruct the free navigation of such water; and the Legislature shall enact such laws as will give the most liberal construction of this provisions, so that access to the navigable waters of this State shall always be attainable for the people thereof."
Art. X., § 5: "The use of all water now appropriated, or that may hereafter be appropriated, for sale, rental, or distribution, is hereby declared to be a public use, and subject to the regulation and control of the State, in the manner to be prescribed by law."

Art. XA, § 3: "No water shall be available for appropriation by storage in, or by direct diversion from, any of the components of the California Wild and Scenic River System, as such system exists on January 1, 1981, where such appropriation is for export of water into another major hydrologic basin of the state, . . . unless such export is expressly authorized prior to such appropriation be: (a) an initiative statute approved by the electors, or (b) the Legislature, by statute passed in each house by roll call vote entered in the journal, two-thirds of the membership concurring."

Art. XB, § 14: "Prior to January 1, 1994, the Fish and Game Commission shall establish four new ecological reserves in ocean waters along the mainland coast. Each ecological reserve shall have a surface area of at least two square miles. The commission shall restrict the use of these ecological reserves to scientific research relating to the management and enhancement of marine reserves."

Art. XB, § 15: "This article does not preempt or supersede any other closures to protect any other wildlife, including sea otters, whales, and shorebirds."

California Statutes:

- **CAL. PUB. RES. CODE §§ 6301 to 6369.3**: Administration and Control of Swamp, Overflowed, Tide, or Submerged Lands, and Structures Thereon. These provisions give "exclusive jurisdiction over all ungranted tidelands and submerged lands owned by the State" to the State Lands Commission. Any exchanges of lands that are subject to the public trust doctrine must ensure that the lands acquired "will provide a significant benefit to the public trust" and that "the exchange does not substantially interfere with public rights of navigation and fishing."

- **CAL. WATER CODE §§ 1200 to 1248**: Appropriation. "All water flowing in any natural channel, excepting so far as it has been or is being applied to useful and beneficial purposes upon, or in so far as it is or may be reasonably needed for useful and beneficial purposes upon lands riparian thereto, or otherwise appropriated, is hereby declared to be public water of the State and subject to appropriation in accordance with the provisions of this code." These provisions

277. **Id. § 6307**.
allow for protections of flows to "protected areas," and establish that "[t]he use of water for recreation and preservation and enhancement of fish and wildlife resources is a beneficial use of water."  

- **CAL. GOV'T CODE § 39933**: "All navigable waters situated within or adjacent to a city shall remain open to the free and unobstructed navigation of the public. Such waters and the water front of such waters shall remain open to free and unobstructed access by the people from the public streets and highways within the city."

- **CAL. GOV'T CODE § 56740**: "No tidelands or submerged lands... which are owned by the State or by its grantees in trust shall be incorporated into, or annexed to, a city, except lands which may be approved by the State Lands Commission." For purposes of this provision, "'submerged lands'... includes, but is not limited to, lands underlying navigable waters which are in sovereign ownership of the State whether or not those waters are subject to tidal influence."

- **CAL. GOV'T CODE §§ 66478.1 to 66478.14**: Public Access to Public Resources. These public access provisions apply to navigable waters. "The Legislature further finds and declares that it is essential to the health and well-being of all citizens of this state that public access to public natural resources be increased. It is the intent of the Legislature to increase public access to public natural resources."

- **CAL. HARB. & NAV. CODE § 36**: "Navigable waters' means waters which come under this jurisdiction of the United States Army Corps of Engineers and any other waters with the state with the exception of those privately owned."

- **CAL. HARB. & NAV. CODE §§ 90 to 153**: Navigable Waters. "Navigable waters and all streams of sufficient capacity to transport the products of this country are public ways for purposes of navigation and such transportation." However, navigable waters do not include floodwaters. These provisions also expressly list several watercourses as navigable waters and public ways, and they define California's coastline.

• **CAL. HEALTH & SAFETY CODE § 117510:** "Navigable waters' means all public waters of the state in any river, stream, lake, reservoir, or other body of water, including all salt water bays, inlets, and estuaries within the jurisdiction of the state."

### Definition of "Navigable Waters":

The California courts recognize the differences between various definitions of "navigable waters." For example, in 1976 the California Court of Appeals acknowledged that there were two relevant federal definitions of navigability: the Commerce Clause definition and the state title definition. Further, the state title test from *Utah v. United States* determines the waters for which California holds title to the bed and banks as a result of its admission to the Union. However, the court also recognized that for non-federal matters, the states are free to use different definitions of "navigable waters" to determine rights.

Under these rules, "[w]aters which are subject to tidal influence are subject to the public trust regardless of whether they are navigable." Although the boundary between public and private ownership in littoral waters is the low-water mark, in tidal waters, the "lands between the mean high tide and mean low tide are owned by the public." "Tidelands" can cover both true tidelands and submerged lands more generally.

In addition, California has explicitly rejected arguments based on traditional English common law that state ownership of submerged lands is limited to tidal waters. Instead, the California Supreme Court has emphasized that lands beneath nontidal navigable waters "constitute a resource which is fast disappearing in California; they are of great importance for the ecology, and for the recreational needs of the residents of the state."

Upon its admission to the Union, California received title to the beds and banks of federally defined navigable waters "to the high-water mark." Nevertheless, an 1872 statute conveyed title to properties bordering these lands to the low-water mark. Even so, the public trust doctrine applies to the lands

between the low- and high-water marks, although the landowner “may utilize
them in any manner not incompatible with the public’s interest in the
property.”

For purposes of state-law public trust rights, a stream that can only float
logs is not navigable. Landowners can obstruct non-navigable waters at
will.

Nevertheless, “all waters are deemed navigable which are really so.”
“A waterway usable only for pleasure boating is nevertheless a navigable
waterway and protected by the public trust.” Moreover, “[t]here is no
authority, or at least none cited to use, for the proposition a river must be
designated ‘non-navigable’ because it may be navigated only seasonally.”

The U.S. Supreme Court has declared that the Sacramento River in
California is navigable and that private landowners along that river received
title only to the high water mark. In addition, and supported by the fact that
California legislatively deemed the Klamath River in California non-navigable,
the Supreme Court held that title to the Klamath River’s beds in California
remained with the United States and became part of the Hoopa Valley
Reservation.

Rights in “Navigable Waters”:

Article X of the California Constitution constitutionalizes the public trust
doctrine in California. California acquired title to the navigable waterways
and tidelands by virtue of her sovereignty when admitted to the Union in
1850. The traditional uses that the trust protects are navigation, commerce,
and fishing. More expansively, public trust rights “have been held to include the right to fish, hunt, bathe, swim, to use for boating, and general recreation purposes the navigable waters of the state, and to use the bottom of the navigable waters for anchoring, standing, or other purposes.” Importantly, the California Supreme Court considers the public trust doctrine to be adaptable and evolving, noting that “[t]he objective of the public trust has evolved in tandem with the changing public perception of the values and uses of waterways.”

“The power of the state to control, regulate and utilize its navigable waterways and the lands lying beneath them, when acting within the terms of the trust, is absolute, except as limited by the paramount supervisory power of the federal government over navigable waters.” Specifically, “[p]reservation of the public trust in the shorezone will allow the state flexibility in determining the appropriate use of such land so that, for example, areas which are endangered by overuse can be closed to certain activities,” because “[t]he exercise of the police power has proved insufficient to protect the shorezone.” No estoppel is available against the government with respect to public trust interests, and exercise of the public trust doctrine is not an unconstitutional taking of private property. However, “the public trust doctrine as codified in the California Constitution does not prevent the state from preferring one trust use over another” in particular situations. Moreover, the state can delegate its regulatory authority over particular public trust lands to state agencies and municipalities.

In early parts of California’s history, the state extensively conveyed public trust lands to private individuals for a variety of purposes. For example, about one-quarter of the original San Francisco Bay was conveyed into private ownership and filled for development. As a result, California recognizes different public trust rights in different public trust lands. Nevertheless, the public generally retains its public trust rights even when the state has conveyed tidelands and lands under navigable waters to private owners, unless the state
conveyed the lands in furtherance of navigation or commerce.\textsuperscript{316} Thus, the public trust applies to the "lands between high and low water in nontidal navigable lakes," even if that land is private ownership.\textsuperscript{317} Especially since the public trust amendments to the California Constitution in 1879, public trust lands "may be conveyed to private persons only to promote trust uses,"\textsuperscript{318} and statutes purporting to abandon the public trust are to be strictly construed; the intent to abandon must be clearly expressed or necessarily implied; and if any interpretation of the statute is reasonably possible which would retain the public's interest in the tidelands, the court must give the statute such an interpretation.\textsuperscript{319}

When trust lands have been conveyed to private individuals, "the interests of the public are paramount in property that is still physically adaptable for trust uses, whereas the interests of the grantees and their successors should prevail insofar as the tidelands have been rendered substantially valueless for those purposes."\textsuperscript{320} However,

there is no legal obligation on the part of a landowner subject to the public trust doctrine to inspect or warn of natural hazards in navigable waters subject to recreational use abutting the property, or to make such water safe for recreational uses by trespassers or those on the water by means other than access over abutting land.\textsuperscript{321}

As a result, landowners along navigable waters who do not alter those waters are entitled to the tort liability protections in the California Civil Code.\textsuperscript{322}

Under the public trust doctrine, owners of property along public trust waters are entitled to natural accretions, because "[t]he state has no control over nature; allowing private parties to gain by natural accretion does not harm to the public trust doctrine."\textsuperscript{323} In contrast, "to allow accretion caused by artificial means to deprive the state of trust lands would effectively alienate what may not be alienated."\textsuperscript{324}

Unlike most states, California has extended its public trust doctrine, beginning in 1971, to the preservation of the natural environment and

  \item \textsuperscript{324} Id.
ecosystems as well as to public uses of the navigable waters and tidelands. In the 1971 case of *Marks v. Whitney*, the California Supreme Court announced:

The public uses to which tidelands are subject are sufficiently flexible to encompass changing public needs. In administering the trust the state is not burdened with an outdated classification favoring one mode of utilization over another. There is growing public recognition that one of the most important public uses of the tidelands—a use encompassed within the tidelands trust—is the preservation of those lands in their natural state, so that they may serve as ecological units for scientific study, as open space, and as environments which provide food and habitat for birds and marine life, and which favorably affect the scenery and climate of the area. It is not necessary here to define precisely all the public uses which encumber tidelands.\(^{325}\)

The recognition of the ecological value of submerged lands extends to nontidal submerged lands as well. As the California Supreme Court stated in connection with Lake Tahoe litigation:

\[\text{The shorezone has been reduced to a fraction of its original size in this state by the pressures of development. Such lands now cover less than one half of 1 percent of the state; a further reduction by 15 percent was projected for 1980. Some authorities have warned that at the present rate of destruction nearly all riparian vegetation on the Sacramento River could be eliminated in the next 20 years.}\]

\[\text{The shorezone is a fragile and complex resource. It provides the environment necessary for the survival of numerous types of fish (including salmon, steelhead, and striped bass), birds (such as the endangered species: the bald eagle and the peregrine falcon), and many other species of wildlife and plants. These areas are ideally suited for scientific study, since they provide a gene pool for the preservation of biological diversity. In addition, the shorezone in its natural condition is essential to the maintenance of good water quality, and the vegetation acts as a buffer against floods and erosion.}\]

\[\text{Thus, the California public trust doctrine extends to “environmental . . . purposes,”}\]

\[\text{and encompasses “the right to preserve the tidelands in the natural state as ecological units for scientific study.”}\]

\[\text{California courts have also extended the public trust doctrine not just to aquatic wildlife habitat, but also to the wildlife itself.}\]

\[\text{“These are natural}\]

resources of inestimable value to the community as a whole. Their protection and preservation is a public interest that is now recognized in numerous state and federal statutory provisions . . . .”330 Those statutes generally define the contours of the public trust obligation regarding wildlife.331 Members of the general public can sue to enforce the wildlife public trust as well as the navigable water public trust, because the public trust doctrine “places a duty upon the government to protect those resources.”332

The California Supreme Court clarified in 2008 that California has “two distinct public trust doctrines”:

First is the common law doctrine, which involves the government’s “affirmative duty to take the public trust into account in the planning and allocation of water resources . . . .” The second is a public trust duty derived from statute, specifically Fish and Game Code section 711.7, pertaining to fish and wildlife: “The fish and wildlife resources are held in trust for the people of the state by and through the department.” There is doubtless an overlap between the two public trust doctrines—the protection of water resources is intertwined with the protection of wildlife. . . . Nonetheless, the duty of government agencies to protect wildlife is primarily statutory.333

Given this statutory focus, an incidental take permit did not violate the common-law public trust doctrine.334

Public trust interests can extend the state’s authority and duties beyond the navigable waters. For example, “[t]he state’s right to protect fish is not limited to navigable or otherwise public waters but extends to any waters where fish are habitated or accustomed to resort and through which they have the freedom of passage to and from the public fishing grounds of the state.”335

Trout, Inc. v. State Water Res. Control Bd., 255 Cal. Rptr. 138, 212 (Cal. Ct. App. 1989) (establishing that Fish and Game Code § 5946 establishes a public trust rule but noting “that it does not follow from the application of the term ‘public trust’ to the state’s interest in fisheries of non-navigable streams that all of the consequences of the public trust doctrine as applicable to navigable waters also apply to non-navigable streams. For example, the beds of non-navigable streams are not owned by the state based upon a public trust fishery interest.”).
335. Golden Feather Cmty. Ass’n v. Thermalito Irrigation Dist., 257 Cal. Rptr. 836, 840 (Cal. Ct. App. 1989); see also People v. Truckee Lumber Co., 48 P. 374, 399–400, 400–01 (Cal. 1897) (noting that “the right and power to protect and preserve [fish] for the common use and benefit is one of the recognized prerogatives of the sovereign, coming to us from the common law” and asserting that the state’s authority to protect fish for the public is not limited to fish in navigable waters; “[t]o the extent that waters are the common passageway for fish, although flowing over lands entirely subject to private ownership, they are deemed for such purposes public waters, and subject to all laws of the state regulating the right of fishery”); Cal. Trout, 255 Cal. Rptr. at 212 (concluding “that a public trust interest pertains to non-navigable streams which sustain a fishery”).
Similarly, in *National Audubon Society v. Superior Court*, the California Supreme Court determined that the public trust doctrine could restrict or modify established water rights even in non-navigable tributaries of navigable waters. Withdrawals of water from Mono Lake's tributaries were imperiling "both the scenic beauty and the ecological values of Mono Lake . . . ." As a result, the public trust doctrine could require modifications in the prior appropriation system:

In our opinions, the core of the public trust doctrine is the state's authority as sovereign to exercise a continuous supervision and control over the navigable waters of the state and the lands underlying those waters. This authority applies to the waters tributary to Mono Lake and bars DWP or any other party from claiming a vested right to divert waters once it becomes clear that such diversions harm the interests protected by the public trust. . . . Approval of such diversions with considering public trust values . . . may result in needless destruction of those values. Accordingly, we believe that before state courts and agencies approve water diversions, they should consider the effect of such diversion upon interests protected by the public trust, and attempt, so far as feasible, to avoid or minimize any harm to these interests.

As such, "the public trust doctrine . . . protects navigable waters from harm caused by diversion of non-navigable tributaries." The state retains the authority to review and reconsider water rights when harm becomes evident, particularly if it did not consider public trust values in the original granting of a water right. Moreover, "in determining whether it is 'feasible' to protect public trust values like fish and wildlife in a particular instance, the [State Water Resources Control] Board must determine whether protection of those values, or what level of protection, is 'consistent with the public interest.'"

"[W]hen the public trust doctrine clashes with the rule of priority, the rule of priority must yield. [Nevertheless,] every effort must be made to preserve water right priorities to the extent those priorities do not lead to violation of the public trust doctrine," and "the subversion of water right priority is justified only if

---

339. *Id.* at 721.

340. *Id.* at 728.

enforcing that priority will in fact lead to the unreasonable use of water or result in harm to values protected by the public trust.\textsuperscript{342}

However, the National Audubon rule does not apply to water withdrawals from purely non-navigable waters in the absence of an effect on navigable waters.\textsuperscript{343} "The public trust doctrine is based upon public access and usage of navigable waters and pursuant to that doctrine the public has an easement and servitude upon such waters. But the public has never had common access and usage of nonnavigable streams . . . ."\textsuperscript{344} Similarly, the California courts have declined to extend the National Audubon doctrine to groundwater.\textsuperscript{345}

While the California public trust doctrine protects a variety of natural resources as well as public uses of water, it does not extend to everything. For example, as a result of California's complicated history, California did not acquire title to—and the public trust doctrine does not apply to—"lands which were the subject of a prior Mexican land grant and later patented by the United States government in accordance with its obligations under the treaty of Guadalupe Hidalgo."\textsuperscript{346} Less uniquely, "[t]he public trust doctrine applicable to beaches owned by the sovereign does not apply to hotels located on land which is privately owned. Although hotel owners have certain common law obligations to travelers, hotels are by no means owned in public trust like public beaches."\textsuperscript{347} Instead, "[t]he doctrine has been restricted to tidelands, navigable waters, and situations where the government or public in general own the property"—situations where "the state holds or held title because it was important the land be available to all. It does not involve private property except where the state has conveyed the land into private hands. It does not cover artifacts located on private property."\textsuperscript{348} The public trust doctrine does not apply to public employment contracts,\textsuperscript{349} or to formal trusts.\textsuperscript{350}

COLORADO

Date of Statehood: 1876

Water Law System: Prior appropriation

Colorado Constitution: Several provisions of Colorado’s constitution relate to water, but the state does not have a constitutionalized public trust doctrine, despite state ballot initiatives in the mid-1990s that repeatedly sought to amend Article XVI, § 5 of the Colorado Constitution to require the state to “adopt and defend a strong public trust doctrine,” even for nonnavigable waters.\textsuperscript{351}

Important water-related and other relevant provisions include:

- Art. IX, § 10: Selection and Management of Public Trust Lands. This section identifies state school lands as public trust lands, to be managed in accordance with Colorado Revised Statutes § 36-1-101.5.

- Art. XVI, § 5: “The water of every natural stream, not heretofore appropriated, within the State of Colorado, is hereby declared to be the property of the public, and the same is dedicated to the use of the people of the state, subject to appropriation as hereinafter provided.”

- Art. XVI, § 6: “The right to divert the unappropriated waters of any natural stream to beneficial uses shall never be denied. Priority of appropriation shall give the better right as between those using the water for the same purpose; but when waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes.”

- Art. XXVII: Great Outdoors Colorado Program. In § 1 of this Article, the Colorado Constitution dedicates lottery money “to the preservation, protection, enhancement and management of the state’s wildlife, park, river, trail and space heritage . . . .” Section 2 establishes a trust fund. However, § 7 declares that “[n]othing in this article shall affect in any way whatsoever any of the provisions under Article XVI of the State Constitution of Colorado, including

\textsuperscript{351} See, e.g., Matter of Title, Ballot Title, Submission Clause, and Summary Adopted April 6, 1994, by Title Board Pertaining to a Proposed Initiative on Water Rights, 877 P.2d 321, 326–29 (Colo. 1994) (en banc) (upholding the initiative); In the Matter of the Title, Ballot Title, Submission Clause, and Summary Adopted April 5, 1995 by the Board Pertaining to a Proposed Initiative “Public Rights in Water II,” 898 P.2d 1076, 1078–80 (Colo. 1995) (en banc) (holding the initiative invalid because it contained more than one subject); In the Matter of the Title, Ballot Title, Submission Clause, and Summary Adopted March 20, 1996, by the Title Board Pertaining to Proposed Initiative “1996-6,” 917 P.2d 1277, 1279–82 (Colo. 1996) (en banc) (upholding the initiative).
those provisions related to water, nor any of the statutory provisions related to the appropriation of water in Colorado.”

**Colorado Statutes:**

- **COLO. REV. STAT. §§ 37-80-101 to 37-80-120:** State Engineer.
- **COLO. REV. STAT. §§ 37-81-101 to 37-81-104:** Diversion of Waters.
- **COLO. REV. STAT. §§ 37-82-101 to 37-82-106:** Appropriation and Use of Water.
- **COLO. REV. STAT. §§ 37-83-101 to 37-83-106:** Exchange of Water.
- **COLO. REV. STAT. §§ 37-84-101 to 37-84-125:** Responsibility of User or Owner.
- **COLO. REV. STAT. §§ 37-85-101 to 37-85-111:** Charge for Delivery of Water.
- **COLO. REV. STAT. §§ 37-86-101 to 37-86-113:** Rights of Way and Ditches.
- **COLO. REV. STAT. §§ 37-87-101 to 37-87-125:** Reservoirs. Section 37-87-102(1) defines “natural stream” and “ordinary high watermark.”
- **COLO. REV. STAT. §§ 37-88-101 to 37-88-110:** State Canals and Reservoirs.

- **COLO. REV. STAT. §§ 37-92-101 to 37-92-602:** Water Right Determination and Administration. Colorado relies on a judicial system rather than a permitting system for its water rights.
- **COLO. REV. STAT. §§ 38-6-201 to 38-6-216:** Condemnation of Water Rights.

**Definition of “Navigable Waters”:**

Colorado retains a “commercial use” definition of “navigable waters.”

However, the Colorado Supreme Court has declared most streams in Colorado non-navigable: “the natural streams of this state are, in fact, nonnavigable within its territorial limits, and practically all of them have their sources within its own boundaries, and . . . no stream of any importance whose source is

---

without those boundaries, flows into or through this state.\textsuperscript{353} As a result, there is almost no case law further explicating the definition of "navigable water."

\textbf{Rights in "Navigable Waters":}

Article XVI, § 5, of the Colorado Constitution establishes the state's property right to the water in natural streams.\textsuperscript{354} Nevertheless, in a non-navigable river, title to the bed and banks is in the private landowner, giving the landowner exclusive control over the water and the right to exclude recreational users who would like to use the water for floating or fishing.\textsuperscript{355}

The Colorado Supreme Court refused to follow the "modern trend"—as represented by Wyoming's interpretation of similar provisions in its constitution—and allow public rights in non-navigable rivers, concluding that Art. XVI, § 5 of the Colorado Constitution does not preserve public recreation rights.\textsuperscript{356} Instead, "\textit{[w]ithout permission, the public cannot use such waters for recreation}."\textsuperscript{357}

One early case notes that in navigable waters, the riparian landowner owns to the thread, or center, of the stream.\textsuperscript{358}

\textbf{HAWAI'I}

\textbf{Date of Statehood:} 1959

\textbf{Water Law System:} Combination of Native Hawaiian rights with elements of both riparianism and prior appropriation

\textbf{Hawai'i Constitution:} "\textit{[T]he people of this state have elevated the public trust doctrine to the level of constitutional mandate . . . . We therefore hold that article XI, section 1, and article XI, section 7 adopt the public trust doctrine as a

\textsuperscript{358} Hanlon v. Hobson, 51 P. 433, 435 (Colo. 1897).
fundamental principle of constitutional law in Hawai‘i.” The Hawai‘i Constitution constitutionalizes many public trust rights, including the traditional public trust doctrine and a water rights public trust. Relevant provisions include:

- Art. IX, § 8: “The State shall have the power to promote and maintain a healthful environment, including the prevention of any excessive demands upon the environment and the State’s resources.”
- Art. XI, § 1: “For the benefit of present and future generations, the State and its political subdivisions shall conserve and protect Hawai‘i’s natural beauty and all natural resources, including land, water, air, minerals and energy sources, and shall promote the development and utilization of these resources in a manner consistent with their conservation and in furtherance of the self-sufficiency of the State. All public natural resources are held in trust by the State for the benefit of the people.”
- Art. XI, § 2: “The legislature shall vest in one or more executive boards or commissions powers for the management of natural resources owned or controlled by the State, and such powers of disposition thereof as may be provided by law; but land set aside for public use, other than for a reserve for conservation purposes, need not be placed under the jurisdiction of such a board or commission.”
- Art. XI, § 6: “The State shall have the power to manage and control the marine, seabed and other resources located within the boundaries of the State, including the archipelagic waters of the State, and reserves to itself all such rights outside state boundaries not specifically limited by federal or international law. All fisheries in the sea waters of the State not included in any fish pond, artificial enclosure or state-licensed mariculture operation shall be free to the public, subject to vested rights and the right of the State to regulate the same; provided that mariculture operations shall be established under guidelines enacted by the legislature, which shall protect the public’s use and enjoyment of the reefs. The State may condemn such vested rights for public use.”
- Art. XI, § 7: “The State has an obligation to protect, control and regulate the use of Hawai‘i’s water resources for the benefit of its people. The legislature shall provide for a water resources agency which, as provided by law, shall set overall water conservation, quality and use policies; define beneficial and reasonable uses; protect ground and surface water resources, watersheds and natural stream environments; establish criteria for water use priorities while assuring appurtenant rights and existing correlative and riparian uses.

and establish procedures for regulating all uses of Hawaii’s water resources.”

- Art. XI, § 9: “Each person has the right to a clean and healthful environment, as defined by laws relating to environmental quality, including control of pollution and conservation, protection and enhancement of natural resources. Any person may enforce this right against any party, public or private, through appropriate legal proceedings, subject to reasonable limitations and regulation as provided by law.”

- Art. XI, § 11: “The State of Hawaii asserts and reserves its rights and interest in its exclusive economic zone for the purpose of exploring, exploiting, conserving and managing natural resources, both living and nonliving, of the seabed and subsoil, and superadjacent waters.”

- Art. XII, § 4: Public Trust: “The lands granted to the State of Hawaii by Section 5(b) of the Admission Act and pursuant to Article XVI, § 7 of the State Constitution . . . shall be held by the State as a public trust for native Hawaiians and the general public.”

- Art. XII, § 5: “There is hereby established an Office of Hawaiian Affairs. The Office of Hawaiian Affairs shall hold title to all the real and personal property now or hereafter set aside or conveyed to it which shall be held in trust for native Hawaiians and Hawaiians.”

- Art. XII, § 6: “The board of trustees of the Office of Hawaiian Affairs shall exercise power as provided by law: to manage and administer the proceeds from the sale or other disposition of the lands, natural resources, minerals and income derived from whatever sources for native Hawaiians and Hawaiians, including all income and proceeds from that pro rata portion of the trust referred to in section 4 of this article for native Hawaiians; to formulate policy relating to affairs of native Hawaiians and Hawaiians; and to exercise control over real and personal property set aside by state, federal or private sources and transferred to the board for native Hawaiians and Hawaiians.”

- Art. XII, § 7: “The State reaffirms and shall protect all rights, customarily and traditionally exercised for subsistence, cultural and religious purposes and possessed by ahupua’a tenants who are descendants of native Hawaiians who inhabited the Hawaiian Islands prior to 1778, subject to the right of the State to regulate such rights.”

- Art. XVI, § 7: Compliance with Trust: “Any trust provisions which the Congress shall impose, upon the admission of this State, in respect of the lands patented to the State by the United States or the proceeds and income therefrom, shall be complied with by
appropriate legislation. Such legislation shall not diminish or limit the benefits of native Hawaiians under Section 4 of Article XII."

Hawai’i Statutes:

- **HAW. REV. STAT. § 7-1**: "The people shall have a right to drinking water, and running water, and the right of way. The springs of water, running water, and roads shall be free to all, on lands granted in fee simple . . . ."

- **HAW. REV. STAT. § 10-1(a)**: Incorporates the trust for Native Hawaiians into the Office of Hawaiian Affairs.

- **HAW. REV. STAT. § 171-1**: The public lands include submerged lands.

- **HAW. REV. STAT. § 171-2**: This provision defines the public lands.

- **HAW. REV. STAT. § 171-3**: The Department of Land and Natural Resources “shall manage, administer, and exercise control over public lands, the water resources, ocean waters, navigable streams, coastal areas, and minerals and all other interests therein . . . .”

- **HAW. REV. STAT. § 171-18**: Public trust lands for schools.

- **HAW. REV. STAT. § 171-36(a)(9)**: The public has the right to use piers.

- **HAW. REV. STAT. § 171-53**: Reclamation of submerged lands is prohibited without the state’s permission.

- **HAW. REV. STAT. ch. 174C**: State Water Code. Section 174C-2(a) “recognize[s] that the waters of the State are held for the benefit of the citizens of the State” and “declare[s] that the people of the State are beneficiaries and have a right to have the waters protected for their use.” In addition, the Code requires the “protection of traditional and customary Hawaiian rights, the protection and procreation of fish and wildlife, the maintenance of proper ecological balance and scenic beauty, and the preservation and enhancement of waters of the State for municipal uses, public recreation, public water supply, agriculture, and navigation. Such objectives are declared to be in the public interest.”

- **HAW. REV. STAT. §§ 174C-31 to 174C-32**: Hawaii Water Plan. The Commission must “[i]dentify rivers or streams, or a portion of a river or stream, which appropriately may be placed within a wild and scenic rivers system, to be preserved and protected as part of the public trust.”

---

361. **Id. § 174C-31(c)(4)**.
Before the State of Hawai‘i can regulate water use in a given area, it must designate a water management area.

These statutes provide protection of instream uses. 362

HAW. REV. STAT. §§ 190D-1 to 190D-36: Oceans and Submerged Lands Leasings.

HAW. REV. STAT. § 200-6: Permits are required for structures or moorings in ocean waters or navigable streams.

HAW. REV. STAT. §§ 205A-1 to 205A-71: Coastal Zone Management.

**Definition of “Navigable Waters”:**

The Hawaiian courts are well aware of the convoluted nature of the “navigable waters” definition. 363 “Navigable waters” in Hawai‘i include all waters subject to the ebb and flow of the tide, whether navigable or not, and waters that are navigable-in-fact, even if not tidal. 364 Hawai‘i has long accepted the tidal test of navigability. 365

Perhaps because of its water resources trust (see below) and its island nature, Hawai‘i does not have well-developed law for non-tidal navigable-in-fact waters. Nevertheless, for public trust purposes, Hawai‘i appears to have adopted the pleasure boat test for navigability: “Navigable waters, including both those navigable by larger vessels and those navigable by rowboats and other small craft, are public highways. The right of navigation includes the right to travel on the waters not only for business purposes but also in pursuit of pleasure.” 366

**Rights in “Navigable Waters”:**

Relying on *Illinois Central Railroad*, the Hawai‘i Supreme Court declared in 1899 that “[t]he people of Hawaii hold the absolute rights to all its navigable waters and the soils under them for their own common use. The lands under the navigable waters in and around the territory of the Hawaiian Government are

362. Id. § 174C-71.
364. Id.
held in trust for the public uses of navigation." \( ^{367} \) Traditionally in Hawai‘i, the right of navigation supersedes the right of fishery. \( ^{368} \)

More recently, the Hawai‘i Supreme Court has described the public trust as "a dual concept of sovereign right and responsibility." \( ^{369} \) Hawai‘i recognizes broad public rights in its waters, noting that "the trust [has] traditionally preserved public rights of navigation, commerce, and fishing. Courts have further identified a wide range of recreational uses, including bathing, swimming, boating, and scenic viewing, as protected trust purposes." \( ^{370} \) Moreover, given Hawaii’s history, "the exercise of Native Hawaiian and traditional and customary rights [is] a public trust purpose." \( ^{371} \) In contrast, "the public trust has never been understood to safeguard rights of exclusive use for private commercial gain. Such an interpretation, indeed, eviscerate[d] the trust’s basic purpose[—]of reserving the resource for use and access by the general public without preference or restriction." \( ^{372} \) Thus, "[a]s commonly understood, the trust protects public waters and submerged lands against irrevocable transfer to private parties, or ‘substantial impairment,’ whether for private or public purposes . . . ." \( ^{373} \)

"[T]he ultimate authority to interpret and defend the public trust in Hawaii rests with the courts," and "[j]ust as private trustees are judicially accountable to their beneficiaries for dispositions of the res, so the legislative and executive branches are judicially accountable for dispositions of the public trust." \( ^{374} \) Moreover, "[t]he beneficiaries of the public trust are not just present generations but those to come." \( ^{375} \)

In general, "beachfront title lines run along the upper annual reaches of the waves, excluding storm and tidal waves." \( ^{376} \) Similarly, although "Hawaii’s land laws are unique in that they are based on ancient tradition, custom, practice and usage," the boundary designated "ma ke kai" "is along the upper

reaches of the wash of waves, usually evidence by the edge of vegetation or by the line of debris left by the wash of waves . . . 377

The public trust doctrine can invalidate any attempts to extend property boundaries beyond the high-water mark:

In Hawaii, the public trust doctrine, recognized in our case law prior to the enactment of our land court statute, can similarly be deemed to create an exception to our land court statute, thus invalidating any purported registration of land below the high water mark. . . [Land below high water mark is held in public trust by the State, whose ownership may not be relinquished, except where relinquishment is consistent with certain public purposes.378

Moreover, because the public has long used the beaches of Hawai‘i, that use “has ripened into a customary right. Public policy, as interpreted by this court, favors extending to public use and ownership as much of Hawai‘i’s shoreline as is reasonably possible.”379 Finally, for similar public policy reasons, “lava extensions vest when created in the people of Hawaii, held in public trust by the government for the benefit, use, and enjoyment of all the people,” and therefore “the State as trustee has the duty to protect and maintain [this] trust property and regulate its use.”380

Most recently, the Hawai‘i Supreme Court has suggested that the public trust doctrine extends to environmental and biodiversity protection. For example, in 2005, it suggested that the public trust doctrine applies, via Article XI, § 1 of the Hawai‘i Constitution, to regulation of the Palila, an endangered bird.381 The following year, it explicitly held that the Department of Health and counties are bound by the public trust doctrine when implementing the federal Clean Water Act. Thus, when environmental groups sued the Department of Health asserting that the Department had violated the public trust doctrine by failing to prevent a developer from violating state water quality standards for coastal waters, the court concluded that state issuance of National Pollutant Discharge Elimination System permits pursuant to the Clean Water Act are subject to the public trust doctrine and that the Department of Health must ensure that water quality measures are actually being implemented.382

377. In re Application of Ashford, 440 P.2d 76, 77 (Haw. 1968) (citing Keelikolani v. Robinson, 2 Haw. 514 (Hawaii Terr. 1862)); see also Territory v. Kerr, 16 Haw. 363, 1905 WL 1327, at *4 (Haw. Terr. 1905) (holding that grants of property “along the sea” go to the high water mark); In re Sanborn, 562 P.2d at 776 n.6 (noting that title to non-tidal navigable-in-fact waters goes to the high-water mark).

378. In re Sanborn, 562 P.2d at 776; see also Hawaii County v. Sotomura, 517 P.2d 57, 63 (Haw. 1973) (noting that, pursuant to the public trust doctrine, land below the high water mark belongs to the public).

addition, under Article XI, § 1 of the constitution, counties have public trust duties as well, and they “have an obligation to conserve and protect the state’s natural resources.”

Public trust principles in Hawai‘i extend to water rights through a unique water resources trust akin to, but of different origin from, the navigable waters public trust. Emphasizing the 1978 amendments to the Hawai‘i Constitution that constitutionalized the public trust doctrine, the Hawai‘i Supreme Court has noted that in the Kingdom of Hawai‘i, the right to water was reserved to the people for their common good in all land grants, and ownership of the water itself remained at all times in the people. This sovereign reservation imposed a public trust on the water itself, similar to, but different from, the public trust doctrine that arises as a result of state title to the beds and banks of navigable waters.

Given Hawaii’s water situation, the reassertion of this traditional water resources trust has been deemed critical, both as against assertions of riparian rights and in light of the State Water Code and water use permits. With respect to riparian rights,

[...]he reassertion of dormant public interests in the diversion and application of Hawaii’s waters has become essential with the increasing scarcity of the resource and recognition of the public’s interests in the utilization and flow of these waters. . . . [W]hile there indeed exist relative usufructory rights among landowners, these rights can no longer be treated as though they are absolute and exclusive interests in the waters of our state.

Instead, “underlying every private diversion and application there is, as there always has been, a superior public interest in this natural bounty.”

With respect to the State Water Code:

The public trust in the water resources of this state, like the navigable waters trust, has its genesis in the common law. . . . The [State Water] Code does not evince any legislative intent to abolish the common law public trust doctrine. To the contrary, . . . the legislature appears to have engrafted the doctrine wholesale in the Code.

As a result, the State Water Code “does not supplant the protections of the public trust doctrine,” and “the public trust doctrine applies to all water resources without exception or distinction,” including ground waters. In

383. Id. at 1004–05.
385. In re Water Use Permit Applications, 9 P.3d at 441; Robinson, 658 P.2d at 310 (noting that this sovereign interest was more than just a police power interest; “[t]he nature of this ownership is thus akin to the title held by all states in navigable waterways”).
386. Robinson, 658 P.2d at 311.
387. Id. at 312.
388. In re Water Use Permit Applications, 9 P.3d at 443 (citations omitted).
389. Id. at 445.
addition, “the maintenance of waters in their natural state constitutes a distinct ‘use’ under the water resources trust.”

Similarly, “a reservation of water constitutes a public trust purpose.” As a result, the Department of Hawaiian Home Land’s reservations of water throughout the State are entitled to the full panoply of constitutional protections afforded other public trust purposes. To hold otherwise would undermine the public trust doctrine, which is a state constitutional doctrine, and the relevant policy declarations set forth in the [State Water] Code.

“The state water resources trust embodies a dual mandate of 1) protection and 2) maximum reasonable and beneficial use.” Specifically, the state has a “duty to ensure the continued availability and existence of its water resources for present and future generations,” but also a “duty to promote the reasonable and beneficial use of water resources in order to maximize their social and economic benefits to the people of this state.” With respect to the water resources trust, moreover, the Hawai‘i Supreme Court explicitly followed California’s decision in the Mono Lake case, suggesting that the water resources trust is more protective than the navigable waters public trust doctrine. Indeed, the water resources trust “precludes any grant or assertion of vested rights to use water to the detriment of public trust purposes.” As in California, moreover, the state may “revisit prior diversions and allocations, even those made with due consideration of their effect on the public trust.” While the Commission may have to balance public and private interests in water, the constitutional requirements of ‘protection’ and ‘conservation,’ the historical and continuing understanding of the trust as a guarantee of public rights, and the common reality of the ‘zero-sum’ game between competing water uses demand that any balancing between public and private purposes begin with a presumption in favor of public use, access, and enjoyment...

Moreover, the Commission's decisions in favor of private commercial uses are subject to "higher scrutiny." Moreover, the Commission must consider the cumulative impacts of diversions and "implement reasonable measures to mitigate this impact, including the use of alternative sources."

IDAHO

**Date of Statehood:** 1890

**Water Law System:** Prior appropriation

**Idaho Constitution:** Idaho has not constitutionalized its public trust doctrine. However, its constitution does establish water rights. Relevant provisions of the Idaho Constitution include:

- Art. XV, § 1: "The use of all waters now appropriated, or that may hereafter be appropriated for sale, rental, or distribution; also of all water originally appropriated for private use, but which after such appropriation has heretofore been, or may hereafter be sold, rented, or distributed, is hereby declared to be a public use, and subject to the regulations and control of the state in the manner prescribed by law."

- Art. XV, § 3: "The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses, shall never be denied, except that the state may regulate and limit the use thereof for power purposes. Priority of appropriation shall give the better right as between those using the water . . . ."

- Art XV, § 7: "[T]he State Water Resource Agency shall have power to formulate and implement a state water plan for optimal development of water resources in the public interest . . . ."

**Idaho Statutes:** Idaho has codified its public trust doctrine in Idaho Code Annotated §§ 58-1201 to 58-1203, which generally limits the public trust doctrine and its potential impact on appropriated rights. In codifying the doctrine, the Idaho Legislature made the following findings:

1. Upon admission of the state of Idaho into the union, the title to the beds of navigable waters became state property, and subject to its jurisdiction and disposal under the equal footing doctrine. According to the United States [S]upreme [C]ourt's decision in *Shively v. Bowlby*, the state has the right to dispose of the beds of navigable waters, "in such manner as [it] would dispose of the uplands of the state" (see *In re Water Use Permit Applications*, 93 P.3d 643, 650, 657 (Haw. 2004)).

399. *Id.; see also In re Water Use Permit Applications*, 93 P.3d 643, 650, 657 (Haw. 2004) (noting that "because water is a public trust resource and the public trust is a state constitutional doctrine, this court recognizes certain qualifications to the standard of review regarding the Water Commission's decisions" and in effect imposes a burden on proposed users to justify their uses of water). 400. *In re Water Use Permit Applications*, 9 P.3d at 455 (citations omitted).
might deem proper . . . subject only to the paramount right of navigation and commerce.” The state has the right to determine for itself “to what extent it will preserve its rights of ownership in them, or confer them on others.” *Shively v. Bowly*, 152 U.S. 1, 56 (1893); and

(2) Since the admission of the state of Idaho into the union, article XV of the constitution of the state of Idaho has governed the appropriation and use of the waters of Idaho. Pursuant to article XV of the constitution of the state of Idaho, the legislature of the state of Idaho has enacted a comprehensive system of laws for the appropriation, transfer and use of the waters of Idaho, which addresses the public interest therein; and

(3) Upon admission of the state of Idaho into the union, the state was granted certain lands by the United States government as an endowment for designated institutions. Article IX of the constitution of the state of Idaho, and laws enacted pursuant thereto [related to public school lands], establish a comprehensive system of laws for the management of state endowment lands, which addresses the public interest therein; and

(4) The common law doctrine known as the public trust doctrine, adopted by inference in section 73-116, Idaho Code, had guided the alienation or encumbrance of the title to the beds of navigable waters held in trust by the state. The public trust doctrine has been used in court decisions and pleadings in ways that have created confusion in the administration and management of the waters and endowment lands; and

(5) The public’s interest in the environment is protected in other parts of Idaho’s constitution or statutory law; and

(6) The purpose of this act is to clarify the application of the public trust doctrine in the state of Idaho and to expressly declare the limits of this common law doctrine in accordance with the authority recognized in each state to define the extent of the common law.401

The legislation goes on to declare that “[t]he public trust doctrine as it is applied in the state of Idaho is solely a limitation on the power of the state to alienate or encumber the title to the beds of navigable waters as defined in this chapter.”402 Further, “[t]he public trust doctrine shall not be applied to any purpose other than as provided in this chapter,”403 and it does not apply to “[t]he appropriation or use of water, or the granting, transfer, administration, or adjudication of water or water rights . . . or any other procedure or law applicable to water rights in the state of Idaho” or to “[t]he protection or

402. IDAHO CODE ANN. § 58-1203(1).

403. Id. § 58-1203(2).
exercise of private property rights within the state of Idaho. Finally, these statutes define "navigable waters" as "those waters that were susceptible to being used, in their ordinary condition, as highways for commerce on the date of statehood, under the federal test of navigability" and identify the line of "natural or ordinary high water mark" as the boundary of the beds of navigable waters.

Other relevant statutes in Idaho include:

- **IDAHO CODE ANN. § 5-246**: No prescriptive easements for overflows are allowed in the beds of navigable waters.
- **IDAHO CODE ANN. § 36-1601**: This provision defines a "navigable stream" to be "[a]ny stream which, in its natural state, during normal high water, will float cut timber have a diameter in excess of six (6) inches or any other commercial or floatable commodity or is capable of being navigated by oar or motor propelled small craft for pleasure or commercial purposes . . . ."\(^{406}\) It provides for public use rights in "[n]avigable rivers, sloughs or streams within the meander line or, when not meandered, between the flow lines of ordinary high water thereof, and all rivers, sloughs and streams flowing through any public lands of the state," which "shall be open to public use as a public highway for travel and passage, up or downstream, for business or pleasure, and to exercise the incidents of navigation—boating, swimming, fishing, hunting, and all recreational purposes."\(^{407}\) However, this right of use does not include a right of access over private property, except that the public can portage around irrigation dams and other private obstructions.\(^{408}\)
- **IDAHO CODE ANN. §§ 42-101 to 42-114**: Appropriation of Water.
- **IDAHO CODE ANN. §§ 42-501 to 42-505**: Appropriations by the Bureau of Land Management of the US Department of Interior.
- **IDAHO CODE ANN. §§ 42-602 to 42-619**: Distribution of Water Among Appropriators.
- **IDAHO CODE ANN. §§ 42-701 to 42-715**: Headgates and Measuring Devices.
- **IDAHO CODE ANN. §§ 42-1101 to 42-1108**: Rights of Way.
- **IDAHO CODE ANN. §§ 42-1201 to 42-1209**: Maintenance and Repair of Ditches.

405. *Id.* § 58-1202(1), (3).
406. *Id.* § 36-1601(a).
407. *Id.* § 36-1601(b).
408. *Id.* § 36-1601(c).
**Definition of “Navigable Waters”:**

By 1916, the Idaho Supreme Court had rejected the English tidal test of navigability in favor of the navigability-in-fact test. Until January 1, 1977, Idaho Code § 36-907 (1976) defined navigability for public fishing purposes to include any stream supporting log or timber floatation during the high water season. This older statute codified the holding of *Mashburn v. St. Joe Improvement Co.* However, on January 1, 1977, Idaho Code § 36-1601 took effect, codifying the Idaho Supreme Court’s decision in *Southern Idaho Fish & Game Ass’n v. Picabo Livestock, Inc.*, which established a log floatation test for both state title and public fishing purposes and recognized that this test was less restrictive than the federal test articulated in *The Daniel Ball* and *Utah v. United States.*

Idaho has codified the standard federal title test of “navigable waters”—that is, “those waters that were susceptible to being used, in their ordinary condition, as highways for commerce on the date of statehood, under the federal test of navigability”—for its public trust doctrine. Under this test, the

Salmon River is a navigable water and owned by the state, as are the Snake and Clearwater Rivers.

The public retains the right to use a broader category of "navigable streams" that are defined in terms of log floatation and pleasure boating. Finally, Idaho defines a "navigable lake" to be "any permanent body of relatively still or slack water, including man-made reservoirs, not privately owned and not a mere marsh or stream eddy, and capable of accommodating boats or canoes." The U.S. Supreme Court has declared that the Snake River in Idaho is navigable. However, as a result of federal reservations, Idaho does not have title to the beds of Coeur d'Alene Lake or the St. Joe River; instead, the United States hold title to those two waters in trust for the Coeur d'Alene Tribe.

Rights in "Navigable Waters":

Although some early cases suggested that a landowner owns the beds of non-tidal navigable-in-fact rivers, according to current case law and statutes, a riparian owner on a navigable stream or river or a littoral owner on a navigable lake takes title to the natural or ordinary high water mark. The natural or ordinary high water mark is "the line that water impresses on the soil by covering it for sufficient periods to deprive the soil of its vegetation and destroy its value for agricultural purposes.""

"[T]he State owns in trust for the public title to the bed of a navigable water below the OHWM [ordinary high water mark] as it existed at the time the State was admitted into the Union." Landowners cannot exclude the public from using dry land below the OHWM, although they retain a concurrent right of access. "Granting the Lakeshore Owners the right to exclude the public from this portion of state lands would be inconsistent with the public trust doctrine," which preserves the beds of navigable waters for public use.

419. IDAHO CODE ANN. § 36-1601(a), (b).
420. Id. § 58-1302.
426. In re Sanders Beach, 147 P.3d at 85 (quoting Erickson v. Idaho, 970 P.2d 1, 3 (Idaho 1998)).
427. Id.
428. Id. (citing Callahan v. Price, 146 P. 732, 735 (Idaho 1915); Idaho Forest Indus., 733 P.2d at 737).
Moreover, "[t]he public trust doctrine is based upon common law equitable principles," and:

While those equitable principles in certain circumstances may no longer apply to public trust property which has lost its navigable status naturally, it may well be that a loss of navigability resulting from a manmade dike or diversion may not, for equitable reasons, eliminate or destroy the public trust status of land which was once subject to that trust. 429

Similarly, public rights in a navigable river follow any artificial raising of the river level. 430

Illinois Central Railroad established the principle that the state may not abdicate its role as trustee of the lands beneath navigable waters to private parties. 431 In the statutory public trust doctrine enacted in 1996, the Idaho Legislature preserved this primary focus and principle of the public trust. 432 Public trust lands conveyed to private parties by the Department of State Lands are limited by that principle and remain subject to the public trust. 433 "The public trust doctrine at all times forms the outer boundaries of permissible government action with respect to public trust resources." 434 As such, the public trust doctrine creates both procedural and judicial review requirements. Procedurally, "public trust resources may only be alienated or impaired through open and visible actions, where the public is in fact informed of the proposed action and has substantial opportunity to respond to the proposed action before a final decision is made thereon." 435 Judicially, the courts make the final determination as to whether a conveyance is valid, taking a close look at the agency's decision:

[T]he court will examine, among other things, such factors as the degree of the effect of the project on public trust uses, navigation, fishing, recreation, and commerce; the impact of the individual project on the public trust resource; the impact of the individual project when examined cumulatively with existing impediments to full use of the public trust resource . . . ; the impact of the project on the public trust resource when that resource is examined in light of the primary purpose for which the resources is suited, i.e., commerce, navigation, fishing, or recreation; and the degree to which broad public uses are set aside in favor of more limited or private ones. 436

429. Idaho Forest Indus., 733 P.2d at 738 (citing Rutledge v. Idaho, 482 P.2d 515 (Idaho 1981)).
434. Id.
435. Id. at 1091.
436. Id. at 1092-93.
Nevertheless, the state has the burden to prove its title by clear and convincing evidence if the state is not the record title holder. Moreover, "[t]here is no ‘public trust doctrine’ relating to land which is wholly independent or unconnected with such navigable waters." In addition, the public trust doctrine does not apply to private property traceable to an 1892 patent from the United States government.

Although public rights were initially limited to navigation and incidents of navigation, such rights have expanded in Idaho to include fish and wildlife habitat, recreation, aesthetic beauty, and water quality.

By statute, the public trust doctrine does not apply to water rights. This law, enacted in 1996, invalidates a line of cases that had indicated that “proprietary rights to use water . . . are held subject to the public trust.”

KANSAS

Date of Statehood: 1861

Water Law Regime: Prior appropriation

Kansas Constitution: Kansas has not constitutionalized its public trust doctrine. Indeed, there are no provisions in the Kansas Constitution relevant to water.

Kansas Statutes:

- **KAN. STAT. ANN. §§ 82a-201 to 82a-218: Navigable Waters.** If there is a sudden (avulsive) change in a navigable river, the Secretary of State must buy or condemn the new channel. The state will acquire ownership to the high water mark. The state can also convey the old channel.

- **KAN. STAT. ANN. §§ 82a-701 to 82a-773: Kansas Water Appropriation Act.** "All water within the State of Kansas is hereby

dedicated to the use of the people of the state, subject to the control and regulation of the state in the manner herein prescribed. The act allows for minimum streamflows and a permit system. The act also addresses conservation plans and practices, and establishes a water bank.

**Definition of “Navigable Waters”:**

Kansas courts have recognized that, under the English tidal test of navigability, three categories of waters existed: the non-navigable waters; intermediate waters, whose beds were in private ownership but whose waters are subject to public rights of use; and the navigable waters subject to the ebb and flow of the tide, whose beds belong to the Crown. Nevertheless, in the United States, the American navigable-in-fact test governs, and the ancient tidal test was never part of Kansas common law.

Thus, for state title and public trust doctrine purposes, the Kansas courts apply the federal title test of navigability. According to those courts,

Under this test, bodies of water are navigable and title to the beds under the water are vested in the State if: (1) the bodies of water were used, or were susceptible of being used, as a matter of fact, as highways for commerce; (2) such use for commerce was possible under the natural conditions of the body of water; (3) commerce was or could have been conducted in the customary modes of trade or travel on water; and (4) all of these conditions were satisfied at the time of statehood.

Older cases, however, allowed the establishment of navigability by judicial notice, “at least so far as the great rivers are concerned.” Moreover, lack of

Dana, 122 P. 1041, 1042 (Kan. 1911) (noting that “any water to be navigable should be susceptible of use for purposes of commerce or possess the capacity for valuable floatage in transportation to market of the products of the country through which it runs, and should be of practical usefulness to the public as a public highway in its own state and without aid of artificial means; that a theoretical or potential navigability or one that is temporary, precarious and unprofitable, is not sufficient”); Kregar v. Fogarty, 96 P. 845, 846–47 (Kan. 1908) (noting that navigability is a question of fact determined through the federal commerce test; meandering is not dispositive).
453. *Wood*, 26 Kan. at 689 (addressing the navigability of the Kansas River); *Hurst*, 122 P. at 1042 (addressing the Arkansas River).
use does not affect state title to a river that is navigable-in-fact. There is no state common law test of navigability in Kansas. The court emphasized that the creek did not allow for any valuable floatage, that it dries up, and that parts of the creek are not navigable even by canoes. Similarly, the Neosho River was not navigable even though it could support log floatation and light boats over short distances; it was never used to transport the products of the country.

By 1990, three rivers in Kansas had been declared navigable for title purposes: the Kansas River, the Arkansas River, and the Missouri River. Three rivers had been declared non-navigable: the Neosho River, the Delaware River, and the Smoky Hill River.

Rights in “Navigable Waters”:

For navigable streams, the riparian landowner owns “only to the banks.” In contrast, landowners along non-navigable streams own the bed of the stream and may put a fence across the stream to stop trespassing canoeists. “Navigable waters and public waters are synonymous terms. This state claims title to the beds of public streams only. The title to the beds of all other streams is in the riparian owner.”

In navigable waters, both riparian owners and the general public have rights; “[t]he stream is a public highway, and no one can maintain an exclusive privilege to any part of the water.” Public rights include the right to take ice. Moreover:

The title of the state to the bed of a meandered stream is not an absolute fee, which the state can dispose of as it wishes; but such title is vested in it in trust for the benefit and common right of all the people, for the purposes for which such property has been used from time immemorial, viz; the common right of passage, of fishing, of the use of the waters for domestic,

- MONT. CODE ANN., Title 85, Chapter 7: Irrigation Districts.
- MONT. CODE ANN. § 85-16-102: "All docks and wharves built on any of the navigable waters of the state shall be public docks and wharves, and all boats, vessels, and steamboats plying such navigable waters shall have a right to land thereat and take on and discharge their cargoes and passengers thereon. The owner of such dock or wharf shall have the right to charge and collect from the owner or owners of such boat, steamboat, or vessel a reasonable compensation therefor."
- MONT. CODE ANN. § 85-16-107: With respect to land under a navigable water, state ownership extends to the high water mark or meander line.
- MONT. CODE ANN., Title 85, Chapter 20: Water Compacts.
- MONT. CODE ANN. § 87-2-305: "Navigable rivers, sloughs, or streams between the lines of ordinary high water thereof of the state of Montana and all rivers, sloughs, and streams flowing through any public lands of the state shall hereafter be public waters for the purpose of angling, and any rights of title to such streams and the land between high water flow lines or within the meander lines of navigable streams shall be subject to the right of any person owning an angler's license of this state who desires to angle therein or along their banks to go upon the same for such purpose."

Definition of "Navigable Waters":

Early on, the Montana Supreme Court rejected the common law "ebb and flow" tidal rule of navigability in favor of the navigable-in-fact test. 489 For

487. Id. § 85-1-112(1).
488. Id. § 85-1-112(2).
purposes of state title to the beds and banks, Montana uses a federal test of navigability based on *The Daniel Ball* and *The Montello*. However, in the Montana Supreme Court’s interpretation, this is essentially a log floatation test. For example, evidence that the Dearborn River was used in 1887 to float approximately 100,000 railroad ties, and used in 1888 and 1889 to float log drives supported a finding that the river was navigable for state title purposes. State ownership of the bed also gives the state ownership of minerals contained therein. Nevertheless, “where title to the bed of [a river] rests within the State, the test of navigability for use and not for title, is a test to be determined under state law and not federal law.” In its case law relying on the Montana Constitution, the Montana Supreme Court has employed a broad “recreational use” test to determine which waters are subject to public use. Specifically,

the capability of use of the waters for recreational purposes determined whether the waters can be so used. The Montana Constitution clearly provides that the State owns the waters for the benefit of its people. The Constitution does not limit the waters’ use. Consequently, this Court cannot limit their use by inventing some restrictive test.

By statute, for purposes of public use rights, streams and lakes in Montana are navigable if they are navigable in fact under a commerce definition or meandered and returned as navigable by federal surveyors. In addition, the public has a right to fish in any waters that flow through public lands.

According to the U.S. Supreme Court, the Big Horn River is navigable and Montana owns its beds and banks.

**Rights in “Navigable Waters”:**

The line between private and state ownership of the beds of navigable waters is the high-water mark or meander line. However, under older cases...
statutes, riparian landowners on navigable streams took title to the low water mark, while landowners along non-navigable waters took title to the middle of the stream or lake. Nevertheless, even under these cases, public rights extended to the high water mark.

“The public has the right to use the waters and the bed and banks up to the high water mark,” including portage “in the least intrusive manner possible.” Moreover, “[u]nder the Constitution and the public trust doctrine, the public has an instream, non-diversionary right to the recreational use of the State’s navigable surface waters. However, this right does not give the public access rights over private property. Early rights recognized included the rights to fish and to shoot wild ducks.

Montana is one of the western states that has used public ownership of water to extend public trust rights to non-navigable waters. Thus, the Montana Supreme Court has emphasized that “[t]he public trust doctrine in Montana’s Constitution grants public ownership in water not in beds and banks of streams.” Moreover, “[t]he Montana Constitution makes no distinction between Class I and Class II waters. All waters are owned by the State for the use of its people.” As a result, “the public has the right to use the water for recreational purposes and minimal use of underlying and adjoining real estate essential to enjoyment of its ownership in water,” even if the bed and banks are privately owned. “The public has a right of use up to the high water mark, but only such use as is necessary to utilization of the water itself. We hold that

499. Montgomery v. Gehring, 400 P.2d 403, 405 (Mont. 1965) (citing MONT. REV. CODE. § 67-712 (1947)); see also Faucett v. Dewey Lumber Co., 266 P. 646, 648 (Mont. 1928) (noting that under MONT. REV. CODE § 6771 (1921), landowners along navigable waters took title to the low-water mark); Herrin, 241 P. at 331 (same); Gibson v. Kelly, 39 P. 517, 519 (Mont. 1895) (noting that the boundary between public and private ownership is the low water mark, based on CIV. CODE § 772 (1895)).
500. Gibson, 39 P. at 519-20 (recognizing public rights of fishing and navigation to this mark).
504. Herrin, 241 P. at 331.
506. Id.
507. Id.; Mont. Coal. for Stream Access v. Hildreth, 684 P.2d at 1092 (noting that underlying ownership of the bed does not matter for the public’s recreational use right); Mont. Coal. for Stream Access, Inc. v. Curran, 682 P.2d 163, 171 (Mont. 1984) (holding that “under the public trust doctrine and the 1972 Montana Constitution, any surface waters that are capable of recreational use may be so used by the public without regard to streambed ownership or navigability for nonrecreational purposes”).
any use of the bed and banks must be of minimal impact." Nevertheless, Montana statutes make it clear that appropriated water rights trump any other public interest in the waters, including environmental protections and public use rights.

Montana statutes codify public rights of recreation, navigation, and fishing in the navigable and public surface waters. Given the statutory limitations regarding “surface waters” and “natural” waters in § 23-2-301 of the Montana Code, recreational rights in artificial lakes are limited.

**NEBRASKA**

**Date of Statehood:** 1867

**Water Law System:** Prior appropriation, although some riparian rights remain

**Nebraska Constitution:** Nebraska’s constitution contains several provisions relating to water. These include:

- Art. XV, § 4: Water a Public Necessity. “The necessity of water for domestic use and for irrigation purposes in the State of Nebraska is hereby declared to be a natural want.”
- Art. XV, § 5: “The use of the water of every natural stream within the State of Nebraska is hereby dedicated to the people of the state for beneficial purposes, subject to the provisions of the following section.”
- Art. XV, § 6: This section establishes the right to divert unappropriated waters, subject to a public interest limitation and a preference for domestic use, followed by a preference for agriculture.
- Art. XV, § 7: This section declares that the appropriation of water for power uses is a public purpose.

**Nebraska Statutes:**

---

Definition of "Navigable Waters":

In 1906, the Nebraska Supreme Court observed the variations among the states regarding what constituted "Navigable Waters" and blamed the "confusion" on a variety of factors.\(^{513}\) Noting that Nebraska had adopted English common law, the court rejected the navigable-in-fact test for title as a mistake and adhered instead to the common law ebb-and-flow tidal test— even for the Missouri River.\(^{514}\) Despite holding that Nebraska lacked title in the Missouri River, the court explained that "[t]he public retains its easement of the right of passage along and over the waters of the river as a public highway. This is the interest of the public in connection with such rivers which is paramount, and which is, and should be, protected by the courts."\(^{515}\)

Rights in "Navigable Waters":

A landowner along navigable or non-navigable waters "owns to the thread of the stream, and his riparian rights extend to existing and subsequently formed islands."\(^{516}\) "The only difference is that in the case of a navigable

• **NEV. REV. STAT.,** Title 48, Chapter 534: Underground Water and Wells.

• **NEV. REV. STAT.,** Title 48, Chapter 535: Dams and Other Obstructions.

• **NEV. REV. STAT.,** Title 48, Chapter 536: Ditches, Canals, Flumes, and Other Conduits.

• **NEV. REV. STAT.,** Title 48, Chapter 537: Navigable Waters. This chapter lists specific waters that the State of Nevada considers navigable for title purposes. Thus, "[a]ll of the Colorado River within the State of Nevada, from the Arizona line on the north to the California line on the south, is hereby declared to be a navigable stream for purposes of fixing ownership on the banks and beds thereof, and title to the lands below the high water mark thereof is held by the State of Nevada, insofar as they lie within the state."521 Similarly, the Virgin River and Winnemuca Lake are navigable waters, with title to their beds and banks in the State of Nevada.522

• **NEV. REV. STAT.,** Title 48, Chapter 538: Interstate Waters, Compacts, and Commissions. The Colorado River Compact is codified at § 538.010.

• **NEV. REV. STAT.,** Title 48, Chapter 539: Irrigation Districts.

• **NEV. REV. STAT.,** Title 48, Chapter 540: Planning and Development of Water Resources.

• **NEV. REV. STAT.,** Title 48, Chapter 540A: Regional Planning and Management.

• **NEV. REV. STAT.,** Title 48, Chapter 541: Water Conservancy Districts.

• **NEV. REV. STAT.,** Title 48, Chapter 543: Control of Floods.

• **NEV. REV. STAT.,** Title 48, Chapter 544: Modification of Weather.

**Definition of “Navigable Waters”:**

In Chapter 537, Nevada's statutes declare certain waters to be navigable for title purposes, including the Colorado River, the Virgin River, and Winnemuca Lake.523 These statutes are effectively treated as conclusive determinations of navigability for title purposes.524

---

521. Id. § 537.010.
522. Id. §§ 537.020, 537.030.
523. NEV. REV. STAT. § 537 (2008).
524. See State Eng'r v. Cowles Bros, Inc., 478 P.2d 159, 160 (Nev. 1970) (concluding that, because Winnemuca Lake went dry naturally and gradually, the court would normally have declared it non-navigable for title purposes, but for the declaration of navigability in NEV. REV. STAT. § 537.030 (1921)).
However, Chapter 537 does not provide a complete list of the navigable waters in Nevada, and outside of these statutory declarations, the Nevada courts use the federal test for navigability and recognize that the U.S. Supreme Court has established different navigability tests for Commerce Clause and state title purposes.\textsuperscript{525} For state title purposes, the water must be navigable as of the date of statehood.\textsuperscript{526} Moreover, “[a] body of water is navigable if it is used or is usable in its ordinary condition, as a highway of commerce over which trade and travel are or may be conducted.”\textsuperscript{527} Nevertheless, the Nevada Supreme Court has interpreted the federal title test to be a log floatation test, concluding that:

\begin{quote}
[although no Supreme Court case has expressly based its decision of title navigability on the capacity of a stream to float out logs, the emphasized portions of . . . The Montello and Appalachian Power leads us to believe that in the setting of this case navigability for title has been established. Log driving was the first and apparently only important commercial use of the Carson. The river was fortuitously and ideally located geographically for this use. The Carson River was and is navigable.\textsuperscript{528}

Moreover, Nevada courts have noted that the Supreme Court allows states to use less stringent tests for navigability to define allowable public uses.\textsuperscript{529}
\end{quote}

Rights in “Navigable Waters”:

The Nevada Supreme Court has noted that “the states hold title to the beds of navigable watercourses in trust for the people of their respective states. Title to navigable water beds are normally inalienable.”\textsuperscript{530} As a result, in the absence on an express legislative determination to convey these submerged lands, it is presumed that state land patents did not convey them.\textsuperscript{531}

Early case law indicates that private landowners own to the low water mark of navigable waters.\textsuperscript{532} However, if the title describes a meander line, the landowner takes only to that meander line or high water line.\textsuperscript{533}

Nevada's case law on its public trust doctrine is quite limited. Indeed, one writer has declared that "Nevada remains the only western state that has not addressed the public trust doctrine." 534

Nevertheless, as in many western states, the issue of the relationship between appropriative water rights and the public trust doctrine has arisen in Nevada, although the courts have largely side-stepped the issue. 535 The Nevada Supreme Court has discussed the public trust doctrine in the water rights context, however, stating that:

Under the Public Trust Doctrine, the state government, as trustee of all public natural resources, owes a fiduciary obligation to the general public to maintain public uses unless an alternative use would achieve a countervailing public benefit. Thus, the Public Trust Doctrine serves to protect public expectations in natural resources held in common against destabilizing change. 536

Moreover, the State Engineer's refusal to consider alternatives to the [water] project is not consistent with the exercise of his functions as the trustee of water resources in Nevada and his responsibility to insure that 'all sources of water supply within the . . . state whether above or beneath the surface of the ground' is managed as an asset belonging to the public. In refusing to consider any of the alternatives presented by the protestants to the use proposed by the applicants, the State Engineer has violated his trust and has failed to consider adequately the public's interest in its water resources. 537

As in Montana, the statutory declaration of public ownership of Nevada's water may yet influence its public trust doctrine. In 1997, the Nevada Supreme Court declared that "the most fundamental tenet of Nevada water law [is that] '[t]he water of sources of water supply within the boundaries of the state whether above or beneath the surface of the ground, belongs to the public.'" 538 In addition, at least one justice of the Nevada Supreme Court has expressed a willingness to consider "the existence and role of the public trust doctrine in the State of Nevada," noting that in other states the doctrine has evolved to include recreational and ecological uses and emphasizing the public ownership of water in Nevada. 539 According to Justice Rose, "[t]his extension of the doctrine is

539. Mineral County, 20 P.3d at 807-08 (Rose, J., concurring).
natural and necessary where, as here, the navigable water’s existence is wholly dependent on tributaries that appear to be over-appropriated.”

NEW MEXICO

Date of Statehood: 1912

Water Law System: Prior appropriation

New Mexico Constitution: The New Mexico Constitution includes several provisions related to water, and the New Mexico courts have determined that the constitutional declaration of public ownership of the waters is relevant to public use rights. Relevant provisions of the Constitution include:

- Art. XVI, § 1: “All existing rights to the use of any waters in this state for any useful or beneficial purpose are hereby recognized and confirmed.”
- Art. XVI, § 2: “The unappropriated water of every natural stream, perennial or torrential, within the state of New Mexico, is hereby declared to belong to the public and to be subject to appropriation for beneficial use, in accordance with the laws of this state. Priority of appropriation shall give the better right.”
- Art. XVI, § 3: “Beneficial use shall be the basis, the measure and the limit of the right to the use of water.”
- Art. XVI, § 6(A): “The ‘water trust fund’ is created in the state treasury to conserve and protect the water resources of New Mexico and to ensure that New Mexico has the water it needs for a strong and vibrant future. The purpose of the fund shall be to secure a supply of clean and safe water for New Mexico’s residents.”
- Art. XX, § 21: “The protection of the state’s beautiful and healthful environment is hereby declared to be of fundamental importance to the public interest, health, safety and the general welfare. The Legislature shall provide for control of pollution and control of despoilment of the air, water and other natural resources of this state, consistent with the use and development of these resources for the maximum benefit of the people.”

New Mexico Statutes:

- N.M. Stat. Ann. § 3-17-7: “A municipality shall consider ordinances and codes to encourage water conservation and drought management planning . . . .”

540. Id. at 808 (connecting the public trust doctrine to Nev. Rev. Stat. § 533.025, which declares public ownership of Nevada’s water).
WESTERN STATES’ PUBLIC TRUST DOCTRINES

- N.M. STAT. ANN. §§ 3-53-1 to 3-53-5: Municipal Regulation of Waters.
- N.M. STAT. ANN. § 17-4-14: This provision prohibits diversions or reductions of flows that are detrimental to game fish.
- N.M. STAT. ANN. § 19-13-2(C): This provision defines “state lands” to include “all land owned by the state, all land owned by school districts, beds of navigable rivers and lakes, submerged lands and lands in which mineral rights have been reserved to the state.”
- N.M. STAT. ANN., Chapter 72, Article 1: Water Rights in General. “All natural waters flowing in streams and watercourses, whether such be perennial, or torrential, within the limits of the state of New Mexico, belong to the public and are subject to appropriation for beneficial use. A watercourse is hereby defined to be any river, creek, arroyo, canyon, draw, or wash, or any other channel having definite banks and bed with visible evidence of the occasional flow of water.”

This article also contains provisions related to the Pecos River water shortage crisis and New Mexico’s obligations to deliver water to Texas, §§ 72-1-2.1 et seq., and settlements of water rights claims and disputes by tribes.

• N.M. STAT. ANN., Chapter 72, Article 15: Interstate Compacts. The Colorado River Compact is codified within this chapter.

Definition of “Navigable Waters”:

New Mexico cases regarding title navigability are limited, and the most important resulted in the U.S. Supreme Court declaring the Rio Grande non-navigable. Specifically, the Court reversed the New Mexico Territorial Court to find that “the Rio Grande is not navigable within the limits of the territory of New Mexico. The mere fact that logs, poles, and rafts are floated down a stream occasionally and in times of high water does not make it a navigable river.” The Court went on to note:

Obviously, the Rio Grande, within the limits of New Mexico, is not a stream over which, in its ordinary condition, trade and travel can be conducted in the customary modes of trade and travel on water. Its use for any purposes of transportation has been and is exceptional, and only in times of temporary high water. The ordinary flow is not sufficient.

More recently, the New Mexico Court of Appeals relied on the federal test of navigability from The Daniel Ball to declare Navajo Lake to be navigable. However, this question arose in the context of the applicability of maritime law, not state title.

543. ld. § 72-11-1.
544. ld. § 72-12-1.
545. ld. § 72-15-5.
547. ld. at 699.
State title to the beds and banks of navigable waters is less critical to New Mexico’s public trust doctrine than in other states, because the New Mexico Supreme Court held early on that the New Mexico Constitution’s declaration of public ownership of waters—Article XVI, § 2—is relevant to the definition of “public waters” for public use purposes. Regarding this provision as a declaration of existing law, not a change, the court concluded that beneficial uses include recreation and fishing, unhindered by a doctrine of riparian rights. Moreover, navigability under federal law is not the only test for determining whether waters are public; recreational use is enough.

Rights in “Navigable Waters”:

“So far as non-navigable streams are concerned, the common law rule, seemingly without exception, is that the one owning both banks of a stream likewise owns the entire bed thereof, the waters are private waters, and the owner has the exclusive right to fish therein.” Although “[t]he same rule is sometimes applied to navigable streams . . . it is conceded that the weight of authority is, rather, that the bed and waters of a navigable stream are the property of the public with adjoining land owners having no exclusive right to fish therein.” Indeed:

Where there is no separation in ownership of soil and water, “the right to hunt and trap from boats on rivers, lakes, streams, etc., is analogous to the right to take fish from the water. As a general rule, the test as to the public right of fowling, hunting, and trapping is the public or private ownership of the soil beneath the waters.”

As in many western states, the fact that the New Mexico Constitution declares waters to be publicly owned is relevant not just to state water law but also to the public’s rights to use those waters. In 1947, the New Mexico Supreme Court declared that all waters are public waters until beneficially appropriated, and hence the public can use all waters for outside recreation, sports, and fishing.

In 1899, the U.S. Supreme Court suggested with regard to the Rio Grande River that the federal government’s interest in downstream navigability may limit application of the prior appropriation doctrine. Thus, even though the Rio Grande is non-navigable in New Mexico, the Rio Grande Dam & Irrigation Company could not divert the entire flow of the river and so destroy

554. Id. at 429–32.
downstream navigability. While the Court recognized that the western states were moving toward prior appropriation, it still held that appropriative rights under state law could not destroy the United States' rights to downstream flow. As a result, it remanded the case for a determination of the effects of the irrigation company's proposed dam and diversion on downstream navigability. After the case made another trip to the Supreme Court, the New Mexico Territorial Court eventually concluded that the irrigation company had forfeited its right to build the dam.

**NORTH DAKOTA**

**Date of Statehood:** 1889

**Water Law System:** Prior appropriation

**North Dakota Constitution:** The North Dakota Constitution has two provisions potentially relevant to public trust principles:

- Art. XI, § 3: "All flowing streams and natural watercourses shall forever remain the property of the state for mining, irrigating and manufacturing purposes."
- Art. XI, § 27: "Hunting, trapping, fishing and the taking of game area valued part of our heritage and will be forever preserved for the people and managed by law and regulation for the public good."

**North Dakota Statutes:**

- N.D. CENT. CODE § 47-01-15: "Except when the grant under which the land is held involves a different intent, the owner of the upland, when it borders on a navigable lake or stream, takes to the edge of the lake or stream at low watermark. All navigable rivers shall remain and be deemed public highways. In all cases when the opposite banks of any stream not navigable belong to different persons, the stream and the bed thereof shall become common to both."
- N.D. CENT. CODE § 47-06-08: "Islands and accumulations of land formed in the beds of streams which are navigable belong to the state, if there is no title or prescription to the contrary. The control and management, including the power to execute surface and

---

556. *Id.* at 703.
557. *Id.* at 710.
mineral leases, of islands, relictions, and accumulations of land owned by the state of North Dakota in navigable streams and waters and the beds thereof, must be governed by chapter 61-33."

- N.D. CENT. CODE § 61-01-01: "All waters within the limits of the state from the following sources of water supply belong to the public and are subject to appropriation for beneficial use and the right to uses these waters must be acquired pursuant to chapter 61-04": surface waters, "excluding diffuse surface waters," and all waters underground.

- N.D. CENT. CODE § 61-01-08: "Every person who in any manner obstructs the free navigation of any navigable watercourse within this state is guilty of a misdemeanor."

- N.D. CENT. CODE § 61-01-17: This provision allows the booming of logs on shores of navigable streams, but the owner must leave a channel for free passage.

- N.D. CENT. CODE, Chapter 61-04: Appropriation of Water. Among other things, the proposed appropriation must be in the public interest, which includes consideration of "the effect on fish and game resources and public recreation opportunities." North Dakota prioritizes uses of water; fish, wildlife, and recreational uses are all included in the sixth priority, after domestic, municipal, livestock, irrigation, and industrial uses.

- N.D. CENT. CODE § 61-04.1-01: "[T]he state of North Dakota claims its sovereign right to use the moisture contained in the clouds and atmosphere within the state boundaries. All water derived as a result of weather modification operations shall be considered a part of North Dakota’s basic water supply and all statutes, rules, and regulations applying to natural precipitation shall also apply to precipitation resulting from cloud seeding."

- N.D. CENT. CODE, Chapter 61-15: Water Conservation. A "navigable lake" is "any lake which shall have been meandered and its metes and bounds established by the government of the United States in the survey of public lands." This section also defines "high water mark." Under its police power, the state has control of navigable lakes "within the ordinary high water mark for the purpose of constructing, maintaining, and operating dams, dikes, ditches, fills, spillways, or other structures to promote the conservation, development, storage, distribution, and utilization of

561. Id. § 61-04-06.1.
562. Id. § 61-15-01.
such water and the propagation and preservation of wildlife.”

These provisions also allow for water and wildlife conservation projects. Finally, “[a]ny person who, without written consent of the state engineer, shall drain or cause to be drained, or who shall attempt to drain any lake or pond, which has been meandered by the government of the United States in the survey of public lands, shall be guilty of a class B misdemeanor.”

- N.D. CENT. CODE § 61-33-01: “Sovereign lands” are “those areas, including beds and islands, lying within the ordinary high watermark of navigable lakes and streams.”

**Definition of “Navigable Waters”:**

Navigability for title purposes is a question of federal law, and a water is navigable if it is navigable-in-fact. North Dakota does not employ the tidal navigability test. Instead:

When a stream is not tidewater . . . , it must be navigable in fact in its natural state, without the aid of or reference to artificial means, and be of sufficient capacity to render it capable of being used as a highway for commerce, either in the transportation of the products of the mines, forests, or of the soil of the country through which it runs, or of passengers . . . .

It must be capable of being used for such a purpose, that is, for a public highway, a considerable part of the year, and it is not sufficient that it have an adequate volume of water therefor only occasionally, as the result of freshets, for brief periods of uncertain recurrence and duration.

The North Dakota Supreme Court has noted, however, that “the test as to navigability applied in North Dakota is not as narrow as that in federal courts . . . .” A water will be deemed navigable-in-fact for state title purposes if it supports rowing for pleasure and hunting, the cutting and selling of ice, or hunting from flat-bottomed boats. Similarly, public uses supporting navigability do not have to be commercial or pecuniary:

A use public in its character may exist when the waters may be used for the convenience and enjoyment of the public, whether traveling upon trade purposes or pleasure purposes. . . . Purposes of pleasure, public

563. Id. § 61-15-02.
564. Id. § 61-15-03.
565. Id. § 61-15-08.
569. Ozark-Mahoning Co., 37 N.W.2d at 491.
convenience, and enjoyment may be public as well as purposes of trade. Navigation may as surely exist in the former as in the latter.\textsuperscript{571}

In addition, it is the capacity for public use, not current use, that counts.\textsuperscript{572}

Even so, under this test Fuller Lake is non-navigable, because it is small and marshy and its only public use is hunting.\textsuperscript{573} Similarly, Grenora Lake is also not navigable:

There is no evidence that any use has ever been or could be made of the waters of the lake either for pleasure or for profit, for travel, or for trade. No boats were used thereon. The water at all times has been of such a character that it was not habitable for fish. Neither the lake not its surroundings are suitable for any purposes of pleasure. It is true that aquatic birds sometimes rested on its surface and there is evidence that hunters occasionally shot waterfowl that flew to or from the lake, but this was an infrequent occurrence.\textsuperscript{574}

The provision of the North Dakota Constitution declaring waters to be publicly owned does not give the state title to the beds and banks.\textsuperscript{575} The Legislature can declare waters navigable, but “[t]he Legislature may not adopt a retroactive definition of navigability which would destroy a title already vested under a federal grant, or transfer to the state a property right in a body of water or the bed thereof that had previously been acquired by a private owner.”\textsuperscript{576}

Unless a waterway is meandered or declared navigable by the state legislature, it is presumed to be non-navigable, and the burden of proof is on the party claiming navigability.\textsuperscript{577} Thus, the Mouse River was presumed non-navigable, because the parties assumed that it was.\textsuperscript{578} In contrast, Devil’s Lake was stipulated to be navigable-in-fact based on boats using the lake for commercial purposes.\textsuperscript{579} Similarly, “it is clear from the undisputed testimony . . . and from prior holdings of this court that the Missouri River is a navigable stream in this state.”\textsuperscript{580}

North Dakota engaged in a long battle with the United States to quiet title to the Little Missouri River. Despite original findings that the river was navigable, the U.S. Supreme Court dismissed North Dakota’s quiet title claim on the grounds that North Dakota had failed to comply with the Quiet Title

\textsuperscript{579} Ruten v. North Dakota, 93 N.W.2d 796, 797 (N.D. 1958).
Act's twelve-year statute of limitations for claims against the federal government. In 1986, Congress amended the Act to exempt state claims to navigable rivers from the statute of limitations, and North Dakota re-filed its action. Nevertheless, despite evidence of use by Indians, ferries, and explorers, and modern use by recreational canoeists, the U.S. Court of Appeals for the Eighth Circuit concluded that the Little Missouri River is not navigable and that title to its beds and banks remains in the United States. The court applied The Daniel Ball test of navigability.

**Rights in “Navigable Waters”:**

Riparian landowners own to the thread of non-navigable streams. The federal equal footing doctrine gives states title to the beds underlying navigable waterways to the high water mark, but states can then pick a different title line. Despite a statutory provision establishing that riparian landowners generally take title to the low water mark, "[w]hether North Dakota has limited its title to the area below the low watermark has not been decided." Regardless of title, however, the public trust doctrine extends to the high water mark, because under the equal footing doctrine and the public trust doctrine, the state could not totally abdicate its interest in that land. Thus, the state and private landowners have co-existent, overlapping interests in the shore zone between the high and low water marks. The ordinary high water mark is determined by the existing state of the river, even if Army Corps dams—as on the Missouri River—have raised the water level. "[T]he state has rights in the property up to the ordinary high watermark. The ordinary high watermark is ambulatory, and is not determined as of a fixed date." The public trust doctrine and its protection of the public’s right of navigation support this view.

592. Id. at 593.
"The purpose of state title was to protect the public right of navigation."593 Indeed, by statute, "[a]ll navigable rivers shall remain and be deemed public highways."594 Thus, the policy of protecting the public right of navigation is embodied in both the public trust doctrine and North Dakota statutes.595 State title and public rights shift to the new beds when navigable rivers change course:

The Territorial Legislative Assembly recognized that our state would receive title to the beds of navigable waters at statehood. Accordingly, by 1877, it had enacted a code that would secure title of the state to such lands and modify common law so that the state’s title would follow the movement of the bed of the river. This accords with the underlying public policy, since the purpose of a state holding title to a navigable riverbed is to foster the public’s right of navigation, traditionally the most important feature of the public trust doctrine. Moreover, it seems to us that other important aspects of the state’s public interest, such as bathing, swimming, recreation, and fishing, as well as irrigation, industrial and other water supplies, are most closely associated with where the water is in the new riverbed, not the old.596

The public trust doctrine does not prohibit all development, and hence the granting of a permit to drain wetlands did not violate the public trust doctrine—assuming that the doctrine even applied—when the State Engineer studied the consequences, imposed conditions, and was subject to a public interest requirement.597 However, the public trust doctrine does limit the state’s discretionary authority “to allocate vital state resources,” as enunciated in Illinois Central Railroad.598

Moreover, the doctrine is not restricted to conveyances of real property; instead, “[t]he State holds the navigable waters, as well as the lands beneath them, in trust for the public,” as provided in the North Dakota Constitution and refined in statutes.599 Thus, North Dakota’s public trust doctrine applies to appropriations of water. When the State Engineer issues water permits, “the Public Trust Doctrine requires, at a minimum, a determination of the potential effect of the allocation of water on the present water supply and future needs of this State. This necessarily involves planning responsibility.”600 While the

North Dakota Supreme Court also acknowledged that "[i]t is evident that the Public Trust Doctrine is assuming an expanding role in environmental law," it saw no need for such expansive declarations in the context of water rights permitting.601 Instead, even as "[c]onfined to traditional concepts, the Doctrine confirms the State's role as trustee of the public waters. It permits alienation and allocation of such precious state resources only after an analysis of present supply and future need."602

OKLAHOMA

Date of Statehood: 1907

Water Law System: Prior appropriation and riparian rights603

Oklahoma Constitution: Only one provision of the Oklahoma Constitution is relevant to water. It declares that "'[t]he Legislature shall have power and shall provide for a system of levees, drains, and ditches and of irrigation in this State when deemed expedient . . . '"604

Oklahoma Statutes:

- OKLA. STAT. ANN. tit. 60, § 60: This section preserves riparian rights to use water for domestic use.
- OKLA. STAT. ANN. tit. 60, § 337: "Islands and accumulations of land formed in the beds of streams which are navigable, belong to the state, if there is no title or prescription to the contrary."
- 80 OKLA. STAT. ANN. tit., Chapter 2: Irrigation Districts.
- 80 OKLA. STAT. ANN. tit., Chapter 4: Conservation in General.

601. Id. at 463.
602. Id.; see also N.D. State Water Comm’n v. Bd. of Managers, 332 N.W.2d 254, 258 (N.D. 1983) (holding that the State does not lose its authority over the waters of a lake merely because the bed is privately owned and determining that "[p]rotecting the integrity of the waters of the state is a valid exercise of the Commission’s duties pursuant to § 61-02-12, NDCC, as well as being part of the state’s affirmative duty under the 'public trust' doctrine"; as a result the Commission had authority to control the drainage of a non-navigable lake).
603. Franco-Am. Charolaise, Ltd. v. Okla. Water Res. Bd., 855 P.2d 568, 571–72 (Okla. 1990) (noting that while the 1963 amendments to Oklahoma’s water law modified riparian rights, Oklahoma riparian owners retain “a vested common-law right to the reasonable use of the stream,” and the legislature’s attempt to extinguish those riparian rights by giving ownership of all water to the state was unconstitutional; however, appropriative rights for irrigation have existed since 1897, and riparian and appropriative rights are co-existent).
604. OKLA. CONST., art. XVI, § 3.
Definition of "Navigable Waters":

Navigability is a question of fact, and the Oklahoma Supreme Court has adopted and applied the federal test of navigability from *The Montello*.605 Under this test, the South Canadian River is non-navigable, and avulsive (sudden) changes to the river did not change title.606 Similarly, no stipulation was allowed as to the navigability of the Grand River or the Neosho River, and both were found non-navigable under the federal test of navigability.607

---

The Oklahoma Supreme Court has distinguished navigability for title purposes from navigability for public use purposes. Thus, it found that the Kiamichi River was navigable for fishing and pleasure but not for commerce:

"We find that the Kiamichi River is one of the beautiful streams of southeastern Oklahoma that it has for many years been known as one of the best fishing streams in the State and used by the public for fishing, recreation and pleasure; that at one time the stream was used for commercial purposes in that logs were floated down its channel to be used for mill purposes; that at the site of the controversy herein the river was between 150 and 200 feet in width; that many small boats used the river." 608

Thus, the river was not navigable for title purposes and private landowners owned the bed of the river. However, that ownership is "subject to the rights of the public to use the river as a public highway," and the landowner "does not . . . have exclusive fishing rights therein." 609 Thus, the Kiamichi River was "navigable" in the sense that the public could use the river, but not in the sense that the state owned the bed. 610

The Oklahoma Supreme Court has held that the Arkansas River is navigable; as a result, title to the bed vested in the state. 611 However, eight years later, the U.S. Supreme Court declared that under the federal test of navigability, the Arkansas River along the Osage Indian Reservation in Oklahoma is non-navigable and belongs to the United States in trust for the Tribe. 612 The Oklahoma Supreme Court responded by declaring that the Osage Tribe had title only to the bed of the non-navigable portions. 613

In 1953, the Oklahoma Supreme Court declared that the Arkansas River was navigable from its confluence with the Grand River, vesting title to the bed in the state. 614 However, the U.S. Supreme Court determined that the entire river below its confluence with the Grand River, while navigable, was reserved to the Cherokee, Chickasaw, and Choctaw tribes by treaty. 615

In addition, the U.S. Supreme Court has declared that the Red River is not navigable anywhere in Oklahoma, so the state does not own its beds. 616

610. Id. at 936.
Rights in “Navigable Waters”:

The state takes title to the beds of navigable rivers to the high water mark. Moreover, pursuant to *Illinois Central Railroad*, the government has a right to regulate public wharves and piers in navigable waters, loading places along navigable waters, and rights in navigable waters. The Oklahoma courts have not otherwise extensively addressed the state public trust doctrine, except to hold that the public has rights of boating, recreation, and fishing in waters that are not navigable under the federal title test.

When the Oklahoma Supreme Court acknowledged the co-existence of riparian and appropriative water rights in 1990, the dissent was “of the . . . opinion that the majority confuses certain public rights in our streams as being exclusive private property rights of riparians.” In contrast, the dissent was willing to establish an expansive public trust doctrine that would require minimum flows in Oklahoma’s rivers and supersede private rights.

**OREGON**

**Date of Statehood:** 1859

**Water Law System:** Prior appropriation

**Oregon Constitution:** Oregon has not constitutionalized its public trust doctrine. However, the Oregon Constitution contains several relevant provisions, including:

- Art. I, § 1: As part of its private property takings protections, the Oregon Constitution states that “the use of all roads, ways and waterways necessary to promote the transportation of the raw products of mine or farm or forest or water for beneficial use or drainage is necessary to the development and welfare of the state and is declared a public use.”
- Art XI-D, § 1: “The rights, title and interest in and to all water for the development of water power and to water power sites, which the

---

621. Id. at 595–96.
622. See In re Hood River, 227 P. 1065, 1089–90 (Or. 1924) (upholding the state’s prior appropriation system).
state of Oregon now owns or may hereafter acquire, shall be held by
it in perpetuity.”

- Art. XI-D, § 2: As part of its constitutional authority over water
power, “the state of Oregon is authorized and empowered,” *inter
alia*: (1) “[t]o control and/or develop the water power within the
state”; (2) “[t]o lease water and water power sites for the
development of water power”; (3) “[t]o develop, separately or in
conjunction with the United States, or in conjunction with the
political subdivisions of this state, any water power within the state,
and to acquire, construct, maintain and/or operate hydroelectric
power plants, transmission and distribution lines”; (4) “[t]o develop,
separately or in conjunction with the United States, with any state or
states, or political subdivisions thereof, or with any political
subdivision of this state, any water power in any interstate stream
and to acquire, construct, maintain and/or operate hydroelectric
power plants, transmission and distribution lines”; (5) “[t]o contract
with the United States, with any state or states, or political
subdivisions thereof, or with any political subdivision of this state,
for the purchase or acquisition of water, water power and/or electric
energy for use, transmission, distribution, sale and/or disposal
thereof”; and (6) “[t]o do any and all things necessary or convenient
to carry out the provisions of this article.”

- Art XI-D, § 4: Nothing in the constitutional authority over water
power “shall be construed to affect in any way the laws, and the
administration thereof, now existing or hereafter enacted, relating to
the appropriation and use of water for beneficial purposes, other
than for the development of water power.”

- Art. XI-H, § 1: This article provides for “loans and grants for the
purpose of planning, acquisition, construction, alteration or
improvement of facilities for or activities related to, the collection,
treatment, dilution and disposal of all forms of waste in or upon the
air, water and lands of this state.”

- Article XI-I(1): This article covers water development projects and
creates a Water Development Fund. “The fund shall be used to
provide financing for loans for residents of this state for
construction of water development projects for irrigation, drainage,
fish protection, watershed restoration and municipal uses and for the
acquisition of easements and rights of way for water development
projects authorized by law.”

- Art. XV, §§ 4, 4a: These two provisions allow state lottery funds to
be used for “the public purpose of financing the protection, repair,
operation, creation and development of state parks, ocean shores
and public beach access areas, historic sites and recreation areas . . .”
Art. XV, §§ 4, 4b: These two provisions allow state lottery funds to be used for salmonid and wildlife protection, including protection and restoration of watersheds, aquatic habitats, and water quality.

Oregon Statutes:

- OR. REV. STAT., Chapter 196: Columbia River Gorge; Ocean Resource Planning; Wetlands; Removal and Fill. “The protection, conservation and best use of the water resources of this state are matters of the utmost public concern. Streams, lakes, bays, estuaries and other bodies of water in this state, including not only water and materials for domestic, agricultural and industrial use but also habitats and spawning areas for fish, avenues for transportation and sites for commerce and public recreation, are vital to the economy and well-being of this state and its people. Unregulated removal of material from the beds and banks of the waters of this state may create hazards to the health, safety and welfare of the people of this state. Unregulated filling in the waters of this state for any purpose, may result in interfering with or injuring public navigation, fishery and recreational uses of the waters. In order to provide for the best possible use of the water resources of this state, it is desirable to centralize authority in the Director of the Department of State Lands, and implement control of the removal of material from the beds and banks or filling of the waters of this state.” 623 The Director of the Department of State Lands may issue permits for the fill or dredging of water resources only if the activity: “(a) [i]s consistent with the protection, conservation and best use of the water resources of this state . . . ; and (b) [w]ould not unreasonably interfere with the paramount policy of this state to preserve the use of its waters for navigation, fishing and public recreation.” 624 The Oregon courts have concluded that these two provisions (as formerly numbered) “are a codification of the public trust doctrine.” 625

- OR. REV. STAT., Chapter 274: Submersible and Submerged Lands. In general, “submerged lands” in Oregon are “lands lying below the line of ordinary low water of all navigable waters within the boundaries of this state as heretofore or hereafter established, whether such waters are tidal or nontidal.” 626 “Submersible lands,” in contrast, are the “lands lying between the line of ordinary high water and the line of ordinary low water of all navigable waters and all islands, shore lands, or other such lands held by or granted to this

---

624. Id. § 196.825(1).
626. OR. REV. STAT § 274.005(7).
state by virtue of her sovereignty, wherever applicable, within the boundaries of this state as heretofore or hereafter established, whether such waters or lands are tidal or nontidal.”

The “line of ordinary high water” is “the line on the bank or shore to which the high water ordinarily rises annually in season,” while the “line of ordinary low water” is “the line on the bank or shore to which the low water ordinarily recedes annually in season.”

“Tidal submerged lands” are “lands lying below the line of mean low tide in the beds of all tidal waters within the boundaries of this state as heretofore or hereafter established.”

“The title to the submersible and submerged lands of all navigable streams and lakes in this state now existing or which may have been in existence in 1859 when the state was admitted to the Union, or at any time since admission, and which has not become vested in any person, is vested in the State of Oregon. The State of Oregon is the owner of the submersible and submerged lands of such streams and lakes, and may use and dispose of the same as provided by law.”

“The State Land Board has exclusive jurisdiction to assert title to submerged or submersible lands in navigable waterways on behalf of the State of Oregon,” and this chapter provides procedures for the administrative determination of navigability.

Moreover, “all meandered lakes are declared to be navigable and public waters,” with title to their submerged and submersible lands vested in the State of Oregon unless otherwise validly conveyed.

“The Department of State Lands [had] exclusive jurisdiction over all ungranted tidal submerged lands owned by this state . . . .”

- OR. REV. STAT., Chapter 537: Water Rights Act. “All water within the state from all sources of water supply belongs to the public,” including ground water. The Act allows for instream water rights for public uses, and public uses include but are not limited to recreation, “conservation, maintenance and enhancement of aquatic and fish life, wildlife, fish and wildlife habitat and any other ecological values,” pollution abatement, and navigation. In addition, “[p]ublic uses are beneficial uses,” but “[t]he recognition of an in-stream water right . . . shall not diminish the public’s rights

in the ownership and control of the waters of this state or the public trust therein."\(^6\)

The Water Rights Act also allows for extensions of the irrigation season\(^6\) and encourages conservation of water.\(^6\)

- Or. Rev. Stat., Chapter 780: Improvement and Use of Navigable Streams: “All channels of rivers and watercourses made navigable or the navigation of which is improved . . . shall be public highways, and shall be free to all crafts navigating them.”\(^6\)

**Definition of “Navigable Waters”:**

For title purposes, Oregon originally adhered to the ebb-and-flow tidal test of navigability.\(^6\) Thus, because the Tualatin River was not subject to the ebb and flow of the tide, its bed and banks were privately owned.\(^6\) In contrast, the bed and banks of the Columbia River, which is subject to the ebb-and-flow of the tide, are owned by the state.\(^6\) Moreover, in tidal waters, state title advances with the rising of the sea.\(^6\)

However, the Oregon Supreme Court soon thereafter adopted a fairly liberal log floatation test of navigability that extended public use navigability to navigable-in-fact waters. It held in 1869 that:

any stream in this state is navigable on whose waters logs or timbers can be floated to market, and that they are public highways for that purpose; and that it is not necessary that they be navigable the whole year for that purpose to constitute them as such. If at high water they can be used for floating timber, then they are navigable; and the question of their navigability is a question of fact, to be determined as any other question of fact by a jury. Any stream in which logs will go by the force of the water is navigable.\(^6\)

This rule, the court held, best served Oregon public policy:

\(^6\) Id. § 537.334(1), (2).
\(^6\) Id. § 537.385.
\(^6\) Id. § 537.460.
\(^6\) Id. § 780.030.
\(^6\) See Weise v. Smith, 3 Or. 445, 448–49 (1869) (recognizing that the navigable-in-fact test has largely replaced the ebb-and-flow tidal test in the United States); Hinman v. Warren, 6 Or. 408, 411 (1877) (holding that “the tide lands—those uncovered by the ebb and flow of the sea—belong to the state of Oregon by virtue of its sovereignty”); Hogg v. Davis, 30 P. 160, 160 (Or. 1892) (same); Bowby v. Shively, 30 P. 154, 156 (Or. 1892), aff’d, 152 U.S. 1 (1894) (“Upon the admission of the state into the Union, the tide lands became the property of the state, and subject to its jurisdiction and disposal.”).
\(^6\) Hinman, 6 Or. at 411–12; see also Atkinson v. Tax Comm’n of Or., 303 U.S. 20, 22 (1938) (determining that Oregon, not the United States, owns the bed of the Columbia River on Oregon’s side of the border with Washington); Hume v. Rogue River Packing Co., 92 P. 1065, 1067 (Or. 1907) (determining that the Rogue River is navigable, and its bed is owned by the State, because it is influenced by the tide for at least four miles).
\(^6\) Wilson v. Shively, 4 P. 324, 325–26 (Or. 1884).
\(^6\) Felger v. Robinson, 3 Or. 455, 457–58 (1869).
And we think it the rule that best accords with common sense and public convenience, for these rapid streams, penetrating deep into the mountains, are the only means by which timber can be brought from these rugged sections, without great labor and expense; and by their use large tracts of timber, otherwise too remote or difficult of access, can be rendered of great value, as the country shall grow and timber become scarce.\textsuperscript{647}

Thus, "[a] stream, which, in its natural condition, is capable of being commonly and generally useful for floating boats, rafts or logs, for any useful purpose of agriculture or trade, though it be private property, and not strictly navigable, is subject to the public use as a passageway."\textsuperscript{648}

As such, the Oregon courts early on distinguished three categories of waters:

First, Such rivers, or arms of the sea, in which the tide ebbs and flows; and in these, which are technically called navigable, the sovereign is the owner of the subjacent soil, and all right in it belongs exclusively to the public.

Second, Such streams as are navigable in fact for boats, vessels, or lighters; and in these, which are termed public highways, the public have an easement for the purposes of navigation and commerce, but the title of the subjacent soil to the middle of the stream, and the right to the use of the water flowing over it is in the riparian owner, subject to the superior rights of the public to use it for the purposes of transportation and trade. Third, Such streams as are so small or shallow as not to be navigable for any purpose; and in these the public have no rights of a highway or otherwise, and they are altogether private property.\textsuperscript{649}

In 1935, however, the State of Oregon was involved in litigation in the U.S. Supreme Court that applied the federal navigable-in-fact test to determine whether Oregon had title to the beds of Lake Malheur, Mud Lake, Harney Lake, the Narrows, and Sand Reef.\textsuperscript{650} The U.S. Supreme Court emphasized that navigability for purposes of title is a federal question\textsuperscript{651} and applied the

\textsuperscript{647}. \textit{Id.} at 458.

\textsuperscript{648}. Weise v. Smith, 3 Or. 445, 449 (1869); \textit{see also} Haines v. Hall, 20 P. 831, 835 (Or. 1888) ("Whether the creek in question is navigable or not . . . depends upon its capacity in a natural state to float logs and timber, and whether its use for that purpose will be an advantage to the public."); Nutter v. Gallagher, 24 P. 250, 252-53 (Or. 1890); Kamn v. Normand, 91 P. 448, 450-53 (Or. 1907); Lebanon Lumber Co. v. Leonard, 136 P. 891, 892 (Or. 1913); Guilliams v. \textsuperscript{649}. Shaw v. Oswego Iron Co., 10 Or. 371, 375-76 (1882); \textit{see also} Haines v. Welch, 12 P. 502, 503 (noting that navigability "depends upon [the water's] capacity, extent and importance. If it is capable of serving an important public use as a channel for commerce, it should be considered public; but if it is only a brook, although it might carry down saw logs for a few days during a freshet, it is not, therefore, a public highway. (citation omitted) And even if it were public, in the sense that it is useful to float products to market, it can only be used with due regard to the rights of the owner of its banks through which it flows.").

\textsuperscript{650}. United States v. Oregon, 295 U.S. 1, 14 (1935).

\textsuperscript{651}. \textit{Id.} at 14.
federal commerce-based test to determine that none of the waters in question was navigable in fact:

[N]either trade nor travel did then or at any time since has or could or can move over said [waters], or any of them, in their natural or ordinary conditions according to the customary modes of trade or travel over water; . . . nor has any of them since been used or susceptible of being used in the natural or ordinary condition of any of them as permanent or other highways or channels for useful or other commerce.652

As a result, the Oregon courts now apply the federal navigable-in-fact test of navigability as well as the tidal test. Moreover, while acknowledging that this test derives from The Daniel Ball, The Montello, and United States v. Utah, they apply this title test broadly, emphasizing that the extent of commerce on a river is not the test.653 Timber use and log floatation are still evidence of navigability,654 and the Oregon Court of Appeals declared the John Day River navigable on the basis of Native American use and log floatation for timber purposes.655

In addition, according to contemporary Oregon statutes, all meandered lakes are considered navigable and public, unless otherwise validly conveyed.656 Moreover, by statute, Oregon recognizes both the tidal and navigable-in-fact tests for navigability.657 Thus, Oregon now asserts title by statute to a broader category of waters than the federal title navigability test would allow, because Oregon asserts title to the submerged and submersible lands of waters which became navigable after its admission to the United States in 1859, unless those lands have been validly conveyed to private persons.658

Rights in “Navigable Waters”:

Oregon provided the occasion for the U.S. Supreme Court to determine that, once submerged lands passed from the federal government to the states, issues of title as between the state and private landowners were to be determined by state law.659 This case involved the Willamette River, and

Oregon eventually decided that, under Oregon law, the state retained ownership of the bed after an avulsive change to the river.660

Oregon also provided the occasion for the U.S. Supreme Court to declare that, as a federal matter, states take title to the beds of navigable waters to the high-water mark.661 Oregon has now codified this rule.662 Moreover, no adverse possession of lands below the low-water mark of navigable waters is allowed.

In Oregon, riparian owners retain riparian rights to use the water and submerged lands below the high-water mark, including the right to wharf out, the right to moor logs on the water, and a preference in leasing or purchasing tidelands, if the state decides to lease or sell them.663 However, these rights are subject to the public's rights of use.664 The Oregon courts have acknowledged that lands underlying navigable waters have been recognized as unique and limited resources and have been accorded special protection to insure their preservation for public water-related uses such as navigation, fishery and recreation. Under the common law public trust doctrine, the public use of such waters could not be substantially modified except for water-related purposes.665

"The state, as trustee for the people, bears the responsibility of preserving and protecting the right of public use of the waters for those purposes."666

These trustee responsibilities have been applied to fishing regulation. As a result, statutes purporting to convey exclusive rights to fish in navigable waters violated the privileges and immunities clause in the Oregon Constitution.667 Nevertheless, because the state has jurisdiction over navigable waters, it can

662. OR. REV. STAT. §§ 274.025(1), 274.005; see also Hinman v. Warren, 6 Or. 408, 412 (Or. 1877) (concluding that the high tide line is the property line for properties along the Columbia River, regardless of what the grant says); Parker v. W. Coast Packing Co., 21 P. 822, 824 (Or. 1889) (holding that the state owns submerged lands on a navigable river to the high water mark); Oregon v. Portland Gen. Elec. Co., 95 P. 722, 728–29 (Or. 1908) (same).

664. Id. at 218.

666. Or. Shores Conservation Coal. v. Or. Fish & Wildlife Comm'n, 662 P.2d 356, 364 (Or. Ct. App. 1983); see also Wilson v. Welch, 7 P. 341, 344 (Or. 1885) ("The state does own the channel of the navigable river within its boundaries, and the shore of its bays, harbors, and inlets between high and low water, but its ownership is a trust for the public.").

667. Hume v. Rogue River Packing Co., 92 P. 1065, 1072–73 (Or. 1907); see also Johnson v. Hoy, 47 P.2d 252, 252 (Or. 1935) (holding that the Legislature cannot grant an exclusive right to fish for salmon).
regulate fishing. Specifically, fishing methods can be enjoined if they interfere with the public's common right of fishing.

Under the public trust doctrine, "[w]hile certain of the state's interests are alienable, its obligation as trustee of the public interest remains. . . . Thus, all submerged and submersible lands are subject to the paramount responsibility of the state to preserve and protect the public interest." Like California, Oregon views waters as a limited and precious resource:

The severe restriction on the power of the state as trustee to modify water resources is predicated not only upon the importance of the public use of such waters and lands, but upon the exhaustible and irreplaceable nature of the resources and its fundamental important to our society and our environment. These resources, after all, can only be spent once. Therefore, the law has historically and consistently recognized that rivers and estuaries once destroyed or diminished may never be restored to the public and, accordingly, has required the highest degree of protection from the public trustee.

As a result, the purpose of a private use of navigable waters is critical to whether the use may be allowed under the public trust doctrine. Following *Illinois Central Railroad*, the Oregon courts have concluded "that water resources should be devoted to uses which are consistent with their nature and should be protected from inimical uses." Undertakings in furtherance of and consistent with the trust, "such as the construction of wharves, docks and piers," are permitted, while "upland-related activities which consume water resources by adapting them to uncharacteristic uses" must be examined more closely. However, to the extent that the Oregon public trust doctrine prohibits some uses, it "does not prohibit [activities] other than water-related uses . . . ." Moreover, the State Lands Board does not give up the jus publicum in leasing submerged lands.

Dabney, 139 P. 721, 722 (Or. 1914) (holding that the Oregon State Lands Board cannot convey submerged lands "in a manner and for a purpose which would act as a direct and permanent impediment to navigation," because doing so would violate the public trust doctrine); Hinman v. Warren, 6 Or. 408, 412 (1877) (holding that the State "has no authority to dispose of its tidelands in such a manner as may interfere with the free and untrammeled navigation of its rivers, bays, inlets and the like. The grantees of the state [to properties along the Columbia River] took the land subject to every easement growing out of the right of navigation inherent in the public."); Bowlby v. Shively, 30 P. 154, 160 (Or. 1892), aff'd, 152
Oregon's Water Rights Act explicitly acknowledges the public trust doctrine and prohibits instream water rights from diminishing public rights in waters under that doctrine. Moreover, under Oregon case law, private landowners cannot divert navigable-in-fact rivers subject to public use rights.

Oregon statutes extend public rights to any waters made navigable by the state and to non-navigable, privately owned waters that can float boats, rafts or logs. The private owner cannot deny the public its right of navigation, including the right to bypass obstructions by traveling over private land, but the public has only an "incidental" right to "meddle" with the privately owned banks.

In addition, the public has acquired the right to use the dry sand portions of beaches through the doctrine of custom. As a result, there is no taking of private property when the state denies landowners permits to build sea walls.

**SOUTH DAKOTA**

**Date of Statehood:** 1889

**Water Law System:** Prior appropriation

**South Dakota Constitution:** The South Dakota Constitution has no provisions relevant to the public trust doctrine.

**South Dakota Statutes:**

- S.D. Cod. L. § 1-2-8: South Dakota-Nebraska Boundary Compact.
- S.D. Cod. L. § 8-03: "The public has a right to use the strip of land 50 feet landward from all navigable waters provided the strip is

---

U.S. 1 (1894) (holding that the state can dispose of tidelands, but only subject "to the paramount right of navigation and commerce," and "the owner of the upland or tide water has certain rights, arising from his adjacency to such waters, subordinate, however, to their use by the public for navigation and fishing").

680. Id. at 450.
between the ordinary high water mark and ordinary low water mark of public bodies of water.”

- S.D. Cod. L. Chapter 34A-10: Environmental Protection Act. This act creates a private right of action “for the protection of the air, water, and other natural resources and the public trust therein from pollution, impairment, or destruction.” Similarly, agencies can allow parties to intervene in agency proceedings if the proceeding in question “involves conduct which has the effect of polluting, impairing, or destroying the air, water, or other natural resources or the public trust therein.” The act also allows the courts to “grant temporary equitable relief where necessary for the protection of the air, water, and other natural resources or the public trust therein from pollution, impairment, or destruction,” and requires the courts to “adjudicate the impact of the defendant’s conduct on the air, water, or other natural resources and on the public trust therein in accordance with this chapter.” In both administrative and judicial proceedings, “any alleged pollution, impairment, or destruction of the air, water or other natural resources or the public trust therein, shall be determined, and no conduct shall be authorized or approved which does, or is likely to have such effect so long as there is a feasible and prudent alternative consistent with the reasonable requirements of the public health, safety, and welfare.” Courts may “grant temporary and permanent equitable relief, or may impose conditions on the defendant that are required to protect the air, water, and other natural resources or the public trust therein from pollution, impairment, or destruction.”

- S.D. Cod. L. Title 43, Chapter 17: Water Boundaries and Riparian Lands. “The ownership of land below ordinary high-water mark, and of land below the water of a navigable lake or stream, is regulated by the laws of the United States or by such laws of the state as the Legislature may enact.” “Unless the grant under which the land is held indicates a different intent, the owner of the upland, if it borders upon a navigable lake or stream, takes to the edge of the lake or stream at low water mark. All navigable rivers and lakes are public highways within fifty feet landward from the water’s nearest edge, provided that the outer boundary of such public highway may not expand beyond the ordinary high water mark and may not contract within the ordinary low water mark, and

- S.D. COD. L. Title 46, Chapter 8: Water Resources Act: Eminent Domain.

**Definition of “Navigable Waters”:**

South Dakota recognizes several categories of navigable waters. The test of navigability for title purposes under the equal footing doctrine is a federal
According to the South Dakota Supreme Court, the ebb-and-flow tidal test of title navigability is not useful in South Dakota. Instead, the state uses the navigable-in-fact test for other waters. Under this test, Lake Albert is navigable. In addition, by statute, South Dakota has identified the Missouri River, James River, Boise des Sioux River, and the lower five miles of the Big Sioux River as being federally navigable.

For purposes of determining whether the public has rights to use waters, South Dakota uses a common law “pleasure boat” test for navigability. For public use purposes, “whether or not waters are navigable depends upon the natural availability of waters for public purposes taking into consideration the natural character and surroundings of a lake or stream. This division of lakes and streams into navigable and nonnavigable is the equivalent of classification of public and private waters.”

By statute, South Dakota defines “navigable water” for public use purposes to be “[a] stream, or portion of a stream [that] can support a vessel capable of carrying one or more persons throughout the period between the first of May to the thirtieth of September, inclusive, in two out of every ten years.” However, this definition “does not apply to any stream or portion of a stream which is navigable pursuant to federal law.”

Rights in “Navigable Waters”:

Fairly continuously under South Dakota’s statutes, private landowners have owned navigable waters to the low-water mark. However, the landowner’s title is “absolute” only to the high water mark; title to lands between the high water and low water marks is subject to the rights of the public. The public has access to and a right to use these lands for “navigating, boating, fishing, fowling, and like public uses.” Nevertheless,
the ordinary high water mark can migrate, and public rights follow natural changes in the waterway.\textsuperscript{714}

In contrast, at common law, landowners have "absolute ownership" of the beds of non-federally navigable waters.\textsuperscript{715} However, under current statutes, unless the grant under which the land is held indicates a different intent, the owner of the upland, if it borders upon a navigable lake or stream, takes to the edge of the lake or stream at low water mark. All navigable rivers and lakes are public highways within fifty feet landward from the water's nearest edge, provided that the outer boundary of such public highway may not expand beyond the ordinary high water mark and may not contract within the ordinary low water mark . . . .\textsuperscript{716}

For federally navigable waters, "[o]nce the beds of the navigable waters are in state ownership, they are held subject to a public trust and cannot be conveyed unless it would promote a public trust purpose."\textsuperscript{717}

As in many western states, public ownership of water for prior appropriation purposes is becoming relevant to public rights in non-navigable waters in South Dakota. Recently, the South Dakota Supreme Court declared that "[n]ever in South Dakota has determining the navigability of a water body been a matter of deciding if the water itself is public or private."\textsuperscript{718} Instead, under the Desert Land Act of 1877,\textsuperscript{719} non-navigable waters became subject to state control.\textsuperscript{720} When the legislature adopted the prior appropriation doctrine in 1905, it qualified riparian owners' rights to the water, and several states have recognized public rights in water despite private ownership of the bed, including Idaho, Montana, New Mexico, Wyoming, Minnesota, North Dakota, and Iowa.\textsuperscript{721} Moreover, in 1955 the South Dakota Legislature confirmed that all water is public property.\textsuperscript{722} As a result, the Water Resources Act works in tandem with the public trust doctrine:

[W]hile we regard the public trust doctrine and Water Resources Act as having shared principles, the Act does not supplant the scope of the public trust doctrine. The Water Resources Act evinces a legislative intent both to allocate and regulate water resources. In part, this Act codifies public trust

\begin{itemize}
  \item \textsuperscript{715} \textit{Flisrand}, 152 N.W. at 799, 801.
  \item \textsuperscript{716} S.D. CODIFIED LAWS. § 43-17-2.
  \item \textsuperscript{717} Parks v. Cooper, 676 N.W.2d 823, 829 (S.D. 2004) (declaring \textit{Illinois Central Railroad Co.} to be the first definition of the public trust doctrine); \textit{Flisrand}, 152 N.W. at 799–800.
  \item \textsuperscript{718} Parks, 676 N.W.2d at 829. For a more extensive discussion of this case, see generally Janice Holmes, \textit{Note, Following the Crowd: The Supreme Court of South Dakota Expands the Scope of the Public Trust Doctrine to Non-Navigable, Non-Meandered Bodies of Water in Parks v. Cooper}, 38 CREIGHTON L. REV. 1317 (2005).

  \item \textsuperscript{721} Id. at 833–36.
  \item \textsuperscript{722} Id. at 837.
\end{itemize}
principles. The first three sections of the Act embody the core principles of
the public trust doctrine—"the people of the state have a paramount interest
in the use of all the water of the state," SDCL 46-1-1; "the state shall
determine in what way the water of the state, both surface and
underground, should be developed for the greatest public benefit," SDCL
46-1-2; and "all water within the state is the property of the people of the
state." SDCL 46-1-3. 723

Thus, even when increased precipitation creates new lakes over private
property that had never really existed before, “the State of South Dakota retains
the right to use, control, and develop the water in these lakes as a separate asset
in trust for the public,” and the public trust doctrine applies independently of
bed ownership. 724 “[A]ll waters within South Dakota, not just those waters
considered navigable under the federal test, are held in trust by the State for the
public.” 725 The public purposes for which these lakes can be used potentially
include, but are not limited to, “boating, fishing, swimming, hunting, skating,
picnicking, and similar recreational pursuits.” 726 However, the court noted, it
would be better for the Department of Environment and Natural Resources to
regulate public recreational use of new non-navigable lakes, because “it is
ultimately up to the Legislature to decide how these [new] waters are to be
beneficially used in the public interest” and to carry out these policies “through
a coordination of all state agencies and resources.” 727

South Dakota’s Environmental Protection Act also embodies the public
trust doctrine. 728 This act “authoriz[es] legal action to protect ‘the air, water
and other natural resources and the public trust therein from pollution,
impairment or destruction.’” 729

be appropriated only as expressly authorized by law."\textsuperscript{745} Moreover, "[m]aintaining the biological soundness of the state's rivers, lakes, bays, and estuaries is of great importance to the public's economic health and general well-being. The legislature encourages voluntary water and land stewardship to benefit the water in the state,"\textsuperscript{746} and "[t]he legislature has expressly required the commission while balancing all other public interests to consider and, to the extent practicable, provide for the freshwater inflows and instream flows necessary to maintain the viability of the state's streams, rivers, and bay and estuary systems in the commission's regular granting of permits for the use of state waters."\textsuperscript{747} Water rights can be taken by eminent domain.\textsuperscript{748} The Water Code provides for pro rata distribution of water during shortages.\textsuperscript{749} Obstruction of navigable streams is prohibited.\textsuperscript{750}

**Definition of “Navigable Waters”:**

Texas follows the tidal test of navigability for title purposes, and, as such, "[t]he bays, inlets, and other waters along the Gulf Coast which are subject to the ebb and flow of the tide of the Gulf of Mexico are defined as ‘navigable waters.’"\textsuperscript{751} Applying this test, the Texas Supreme Court noted that Tres Palacios Bay was an arm of the Gulf of Mexico and thus held it navigable for title purposes.\textsuperscript{752}

However, Texas also follows the navigable-in-fact test.\textsuperscript{753} "[S]tructures or lakes . . . are navigable in fact when they are used, or are susceptible of being used, in their natural and ordinary condition, as highways for commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water . . . ."\textsuperscript{754} Moreover, the courts consider the navigability test “broad” because navigable waters in Texas “include waters

within the tidewater limits of the Gulf of Mexico and streams that are navigable in law or fact.”755

Nevertheless, “[e]very inland lake or pond that has the capacity to float a boat is not necessarily navigable. It must be of such size and so situated as to be generally and commonly useful as a highway for transportation of goods or passengers between the points connected thereby.”756 Thus, even though boats could float on Stanmire Lake, the lake could not practically be used for commerce, and hence it was not navigable.757 Conversely, under this test, as well as the tidal test, the Old River and San Jacinto River are navigable.758 In addition, the Colorado River is navigable, and the state owns its bed.759

By statute, Texas has defined “navigable stream” to be a river or stream “which retains an average width of 30 feet from the mouth up.”760 While the Texas Court of Appeals referenced this definition in a recent case in connection with title navigability,761 the real “effect of this statute is to render all streams navigable in law that have an average width of 30 feet, regardless of ownership of the bed of the streams and regardless of whether they are actually navigable.”762 Thus, creeks not navigable in fact can still be subject to public use under these statutes.763 This legislation dates back to 1929 and was enacted “because survey lines has incorrectly crossed navigable streams,” and the legislation “sought to rectify those errors by relinquishing title in the streambeds while reserving the public’s right to the waters of navigable streams.”764 However, versions of the thirty-foot rule have actually existed in Texas since 1837.765 Public rights in these waters include navigation, fishing, recreation, and commercial uses.766 For example, Hog Creek is a statutorily navigable stream and the public has a right to enjoy its waters, including by fishing, and those rights extend to a lake formed by damming the creek.767

765. Diversion Lake Club v. Heath, 86 S.W.2d 441, 444 (Tex. 1935).
766. Tex. River Barges, 21 S.W.3d at 352.
767. Hix, 211 S.W.3d at 428.
However, the adjoining lake was not navigable because the statute does not apply to lakes.\textsuperscript{768} In addition, both the north and south forks of the Upper Guadalupe River are navigable under this statutory definition.\textsuperscript{769}

**Rights in “Navigable Waters”:**

"Title to land covered by the bays, inlets, and arms of the Gulf of Mexico with tidewater limits is in the State, and those lands constitute public property that is held in trust for the use and benefit of the people."\textsuperscript{770} As such, submerged lands are different from ordinary public lands.\textsuperscript{771} The shore is the stretch of land between the high and low water marks, and as a "settled principle of English common law," title to the shore belongs to the state.\textsuperscript{772} Until the shore is granted, the state "holds the right, both to the water and land under the water, for the public use; and the right of passing and repassing, navigation, fishing, etc., etc., are common to all the citizens, subject of course to such general regulations as may be imposed for the general benefit."\textsuperscript{773} Public rights include hunting, fishing, navigation, "and other lawful purposes."\textsuperscript{774}

In common law land grants after 1840, the boundary between state and private property in tidal lands is the mean high tide line.\textsuperscript{775} For Spanish or Mexican grants, the boundary is the mean higher high tide line,\textsuperscript{776} which is the average of the higher of the two daily high tides over time. In contrast, "[m]ean high tide is measured by taking an average of all the daily highest readings over a long time. Mean high tide is the same as mean high water."\textsuperscript{777} Title to islands follows title to the bed.\textsuperscript{778}

"[T]wo presumptions arise regarding submerged lands: (1) they are owned by the State and (2) the State has not acted to divest them."\textsuperscript{779} "[O]nly the Texas Legislature may convey submerged tidal lands."\textsuperscript{780} However, unlike in

most states, when the State of Texas does grant submerged lands to individuals, there is no implied reservation in favor of the public trust, despite the ruling in *Illinois Central Railroad*.

The state’s ownership of water is relevant to the operation of the public trust doctrine in Texas. The purpose of the State maintaining title to the beds and waters of all navigable bodies is to protect the public’s interest in those scarce natural resources. As such, “the State, as trustee, is entitled to regulate those waters and submerged lands to protect its citizens’ health and safety and to conserve natural resources.”

There are also indications from the Texas courts that fish and other aquatic life are subject to public trust principles. As far back as 1942, the Texas Civil Court of Appeals declared:

> The waters of all natural streams of this State and all fish and other aquatic life contained in fresh water rivers, creeks, stream, and lakes or sloughs subject to overflow from rivers or other streams within the borders of this State, are declared to be the property of the State; and the Game, Fish ad Oyster Commission has jurisdiction over and control over such rivers and aquatic life. The ownership is in trust for the people . . . , and pollution of streams and water courses is condemned . . . . The Constitution of Texas, Art. 16, § 59(a) . . . designates rivers and streams as natural resources, declares that such belong to the State, and expressly invests the Legislature with the preservation and conservation of such resources.

786. Goldsmith & Powell, 159 S.W.2d at 535.
Utah Constitution: Utah has not constitutionalized its public trust doctrine. However, several provisions of the Utah Constitution are relevant. These include:

- Art. XI, § 6: "No municipal corporation, shall directly or indirectly, lease, sell, alien or dispose of any waterworks, water rights, or sources of water supply now, or hereafter to be owned or controlled by it; but all such waterworks, water rights and sources of water supply now owned or hereafter to be acquired by any municipal corporation, shall be preserved, maintained and operated by it for supplying its inhabitants with water at reasonable charges: Provided, That nothing herein contained shall be construed to prevent any such municipal corporation from exchanging water-rights, or sources of water supply, for other water-rights or sources of water supply of equal value, and to be devoted in like manner to the public supply of its inhabitants."
- Art. XVII, § 1: "All existing rights to the use of any of the waters in the State for any useful or beneficial purpose, are hereby recognized and confirmed."
- Art. XX, § 1: "All lands of the State that have been, or may hereafter be granted to the State by Congress, and all lands acquired by gift, grant or devise, from any person or corporation, or that may otherwise be acquired, are hereby accepted, and declared to be the public lands of the State; and shall be held in trust for the people, to be disposed of as may be provided by law, for the respective purposes for which they have been or may be granted, donated, devised or otherwise acquired."

Utah Statutes:

- UTAH CODE ANN. § 23-21-4(1): "[T]here is reserved to the public the right of access to all lands owned by the state, including those lands lying below the official government meander line of navigable waters, for the purpose of hunting, trapping, or fishing."
- UTAH CODE ANN. § 57-9-6(5): The Marketable Record Title Act does not apply to sovereign lands.
- UTAH CODE ANN. § 63-34-3.2: Wetlands Protection Account. "Funds in the Wetlands Protect Account may be used in accordance with the public trust doctrine."
- UTAH CODE ANN. § 65A-1-1: This provision defines "public trust assets" to be "those lands and resources, including sovereign lands, administered by the" Division of Forestry, Fire, and State Lands.

787. UTAH CODE ANN. § 79-2-305(3) (2009).
788. Id. § 65A-1-1(4).
“Sovereign lands,” in turn, are “those lands lying below the ordinary high water mark of navigable bodies of water at the date of statehood and owned by the state by virtue of its sovereignty.”

- **Utah Code Ann. § 65A-2-5**: The Division of Forestry, Fire, and State Lands (DFFSL) can limit public use of leased parcels of sovereign lands to protect lessees from hunting, trapping, or fishing.

- **Utah Code Ann. § 65A-10-1**: The DFFSL “is the management authority for sovereign lands, and may exchange, sell, or lease sovereign lands but only in the quantities and for the purposes as serve the public interest and do not interfere with the public trust.”

- **Utah Code Ann. § 65A-10-2(1)**: The DFFSL, “with the approval of the executive director of the Department of Natural Resources and the governor, may set aside for public or recreational use any part of the lands claimed by the state as the beds of lakes or streams.”

- **Utah Code Ann. § 65A-10-3**: This provision allows for agreements and establishes dispute resolution procedures to establish boundaries of sovereign lands.

- **Utah Code Ann. § 65A-10-8**: This provision provides for management of the Great Salt Lake.

- **Utah Code Ann. § 73-1-1**: “All waters in this state, whether above or under the ground are hereby declared to be the property of the public, subject to all existing rights to the use thereof.”

- **Utah Code Ann. § 73-1-5**: “The use of water for beneficial purposes, as provided in this title, is hereby declared to be a public use.”

- **Utah Code Ann. §§ 73-3-1 to 73-3-31**: Appropriation of Water. “Rights to the use of the unappropriated public waters in this state may be acquired only as provided in this title. No appropriation of water may be made and no rights to the use thereof initiated and no notice of intent to appropriate shall be recognized except application for such appropriation first be made to the state engineer in the manner hereinafter provided, and not otherwise. The appropriation must be for some useful and beneficial purpose, and, as between appropriators, the one first in time shall be first in rights; provided, that when a use designated by an application to appropriate any of the unappropriated waters of the state would materially interfere

with a more beneficial use of such water, the application shall be
dealt with as provided in Section 73-3-8. No right to the use of
water either appropriated or unappropriated can be acquired by
adverse use or adverse possession."792

Definition of "Navigable Waters":

Utah has provided the U.S. Supreme Court with several occasions to
discuss the definition of navigability that gives states title to the beds and banks
of navigable waters. For example, in litigation regarding title to the Green
River, the Grand River, and the Colorado River in Utah, the U.S. Supreme
Court affirmed that states received title to the beds and banks of navigable
waters upon statehood, while the federal government retained title to the beds
and banks of non-navigable waters.793 The question of title navigability is a
federal question, and hence the fact that the Utah Legislature in 1927 passed
legislation declaring these three rivers navigable was irrelevant.794

Summarizing its prior case law, the U.S. Supreme Court stated that:

The test of navigability has frequently been stated by this Court. In The
Daniel Ball, 10 Wall. 557, 563 . . . , the Court said: "Those rivers must be
regarded as public navigable rivers in law which are navigable in fact. And
they are navigable in fact when they are used, or are susceptible of being
used, in their ordinary condition, as highways for commerce, over which
trade and travel are or may be conducted in the customary modes of trade
and travel on water." In The Montello, 20 Wall. 430, 441 . . . , it was
pointed out that "the true test of navigability of a stream does not depend
on the mode by which commerce is, or may be, conducted, nor the
difficulties attending navigation," and that "it would be a narrow rule to
hold that in this country, unless a river was capable of being navigation by
steam or sail vessels, it could not be treated as a public highway." The
principles thus laid down have recently been restated in United States v.
Holt State Bank, 270 U.S. 49, 56 . . . , where the Court said:

"The rule long since approved by this court in applying the Constitution
and laws of the United States is that streams or lakes which are
navigable in fact must be regarded as navigable in law; that they are
navigable in fact when they are used, or susceptible of being used, in
their natural and ordinary condition, as highways for commerce, over
which trade and travel are or may be conducted in the customary modes
of trade and travel on water; and further that navigability does not
depend on the particular mode in which such use is or may be had—
whether by steamboats, sailing vessels or flatboats—not an absence of
occasional difficulties in navigation, but the fact, if it be a fact, that the

792. Id. § 73-3-1.
793. United States v. Utah, 283 U.S. 64, 75 (1931).
794. Id. at 75 & n.6.
stream in its natural and ordinary condition affords a channel for useful commerce.\textsuperscript{795}

Moreover, “[t]he extent of existing commerce is not the test.”\textsuperscript{796}

Under this test, all three rivers were declared navigable, and Utah owns their beds and banks.\textsuperscript{797} Similarly, the Great Salt Lake is navigable and owned by Utah.\textsuperscript{798} According to the U.S. Supreme Court, “the fact that the Great Salt Lake is not a part of a navigable interstate or international commercial highway in no way interferes with the principle of public ownership of its bed.”\textsuperscript{799} Finally, Utah owns the bed and banks of Utah Lake, another navigable lake.\textsuperscript{800}

In 1927, the Utah Supreme Court rejected the English ebb-and-flow tidal test of navigability.\textsuperscript{801} According to that court’s most recent definition of navigability, a body of water is navigable for title purposes “if it is useful for commerce and has ‘practical usefulness to the public as a public highway’ . . . .”\textsuperscript{802} In contrast, “[a] theoretical or potential navigability, or one that is temporary, precarious, and unprofitable, is not sufficient.”\textsuperscript{803} Under this test, Scipio Lake was not navigable because the lake was not, and was not likely to become, “a valuable factor in commerce.”\textsuperscript{804}

\textbf{Rights in “Navigable Waters”:}

In waters navigable for title purposes, private landowners own only to the high water mark, often deemed the equivalent of the meander line.\textsuperscript{805} The high water mark is “the mark on the land where valuable vegetation ceased to grow because the land was inundated by water for long periods of time.”\textsuperscript{806}

\textsuperscript{805} Provo City v. Jacobsen, 217 P.2d 577, 578 (Utah 1950); see also UTAH CODE ANN. § 23-21-4(1) (2009) (citing the meander line as the line for public rights); UTAH CODE ANN. § 65A-1-1(5) (citing the high water mark as the boundary of sovereign lands). But see Knudsen v. Omanson, 37 P. 250, 251 (Utah 1894) (emphasizing that the border is the water line, not the meander line).
\textsuperscript{806} Provo City, 217 P.2d at 578.
For navigable waters and sovereign lands in Utah, the essence of the public trust doctrine, as expressed in *Illinois Central Railroad*, "is that navigable waters should not be given without restriction to private parties and should be preserved for the general public for uses such as commerce, navigation, and fishing." Deciding whether a conveyance of sovereign lands to a private party was in the public interest is a question of fact for trial.

Public ownership of the water itself has expanded the scope of Utah's public trust doctrine by giving the public rights to use non-navigable waters. Under Utah Code Annotated § 73-1-1, waters are owned by the public. The Utah Supreme Court has explained that:

Public ownership is founded on the principle that water, a scarce and essential resource in this area of the country, is indispensable to the welfare of all people; and the State must therefore assume the responsibility of allocating the use of water for the benefit and welfare of the people of the State as a whole.

Thus:

Under this "doctrine of public ownership," the public owns state waters and has "an easement over the water regardless of who owns the water bed beneath." In granting this public this easement, "state policy recognizes an interest of the public in the use of state waters for recreational purposes." This court has enumerated the specific recreational rights that are within the easement's scope. They include "the right to float leisure craft, hunt, fish, and participate in any lawful activity when utilizing that water." Bed ownership is thus irrelevant for the public's rights to use waters in the state. Moreover, "the scope of the public's easement in state waters provides the public the right to engage in all recreational activities that utilize the water and does not limit the public to activities that can be performed upon the water." As a result, "the public has the right to touch privately owned beds of state waters in ways incidental to all recreational rights provided for in the easement."

Utah appears to have extended its public trust doctrine to ecological protection. As the Utah Supreme Court has explained,

The 'public trust' doctrine... protects the ecological integrity of public lands and their public recreational uses for the benefit of the public at large.

808. *Id.* at 635–36.
812. *Id.* at 901.
813. *Id.* at 901–02 (limiting criminal trespass liability for water users).
The public trust doctrine, however, is limited to sovereign lands and perhaps other state lands that are not subject to specific trusts, such as school trust lands.\footnote{\textit{Nat’l Parks} \& Conservation Ass’n v. Bd. of State Lands, 869 P.2d 909, 919 (Utah 1993).}

**WASHINGTON**

**Date of Statehood:** 1889

**Water Law System:** Prior appropriation. However, existing riparian rights have been protected, especially with respect to non-navigable waters.\footnote{City of New Whatcom v. Fairhaven Land Co., 64 P. 735, 738 (Wash. 1901).} With respect to navigable waters, “the state’s title to the beds and shores of navigable lakes and streams is paramount and absolute, and . . . an abutting owner has no riparian or littoral right in the waters or shores of the stream.”\footnote{Hill v. Newell, 149 P. 951, 952 (Wash. 1915); see also Eisenbach v. Hatfield, 26 P. 539, 541–42 (Wash. 1891) (holding that there are no riparian rights on navigable waters).}

**Washington Constitution:** Washington has constitutionalized some of its public trust doctrine, particularly with regard to state ownership of submerged lands and the \textit{Illinois Central Railroad} limitation on conveyances of submerged lands. Moreover, several provisions of the Washington Constitution are relevant to water and submerged lands. These include:

- Art. XV, § 1: “The state shall never give, sell or lease to any private person, corporation, or association any rights whatever in the waters beyond such harbor lines, nor shall any of the area lying between any harbor line and the line of ordinary high water, and within not less than fifty feet nor more than two thousand feet of such harbor line (as the commission shall determine) be sold or granted by the state, nor its rights to control the same relinquished, but such area shall be forever reserved for landings, wharves, streets, and other conveniences of navigation and commerce.”
- Art. XV, § 2: Leases for wharves and docks in harbors and tidal waters are limited to 30 years.
- Art. XVII, § 1: “The state of Washington asserts its ownership to the beds and shores of all navigable waters in the state up to and including the line of ordinary high tide, in waters where the tide ebbs and flows, and up to and including the line of ordinary high water within the banks of all navigable rivers and lakes: \textit{Provided}, That this section shall not be construed so as to debar any person from asserting his claim to vested rights in the courts of the state.”
Art. XVII, § 2: "The state of Washington disclaims all title in and claim to all tide, swamp and overflowed lands, patented by the United States: Provided, the same is not impeached for fraud."

Art. XXI, § 1: "The use of the waters of this state for irrigation, mining and manufacturing purposes shall be deemed a public use."

### Washington Statutes:

- **WASH. REV. CODE § 79.02.010(1):** "Aquatic lands" are "all state-owned tidelands, shorelands, harbor areas, and the beds of navigable waters as defined in chapter 79.90 RCW that are administered by the [D]epartment [of Natural Resources]."

- **WASH. REV. CODE § 79.02.095:** Normal public lands statutes do not apply to state tidelands, shorelands, harbor areas, and the beds of navigable waters.

- **WASH. REV. CODE § 79.100.010(2):** For purposes of dealing with derelict vessels, "aquatic lands" are "all tidelands, shorelands, harbor areas, and the beds of navigable waters, including lands owned by the state and lands owned by other public or private entities."

- **WASH. REV. CODE §§ 79.105.001 to 79.105.904: Aquatic Lands.** "Aquatic lands" are "all tidelands, shorelands, harbor areas, and the beds of navigable waters." 817 "Beds of navigable waters" are "those lands lying waterward of and below the line of navigability on rivers and lakes not subject to tidal flow, or extreme low tide mark in navigable tidal waters, or the outer harbor line where harbor area has been created." 818 "First-class shorelands" are "the shores of a navigable lake or river belonging to the state, not subject to tidal flow, lying between the line of ordinary high water and the line of navigability, or inner harbor line where established and within or in front of the corporate limits of any city or within two miles of either side." 819 "The legislature finds that state-owned aquatic lands are a finite natural resource of great value and an irreplaceable public heritage." 820 The state is to manage aquatic lands to encourage public use and access and to ensure environmental protection. 821 Moreover, in managing aquatic lands, the state "shall preserve and enhance water-dependent uses," which are favored over non-water dependent use; highest priority goes to "uses which enhance renewable resources, water-borne commerce, and the navigational"
and biological capacity of the waters . . . ." 822 Specifically, the Department must consider the value of state-owned aquatic lands "as wildlife habitat, natural area preserve, representative ecosystem, or spawning area" before leasing the lands or allowing changes in use. 823 Sales and leases of these lands are allowed but require a permit. 824 Similarly, land exchanges are allowed "if the exchange is in the public interest and will actively contribute to the public benefits . . . ." 825

- **WASH. REV. CODE §§ 79.130.010 to 79.130.900: Beds of Navigable Waters.** The legislative intent of these provisions is the same as in § 79.105.001, relating to aquatic lands. 826 Leases of these beds are allowed. 827

- **WASH. REV. CODE §§ 90.03.005 to 90.03.611: Water Code.** "It is the policy of the state to promote the use of the public waters in a fashion which provides for obtaining maximum net benefits arising from both diversionary uses of the state’s public waters and the retention of waters within streams and lakes in sufficient quantity and quality to protect instream and natural values and rights." 828 "Subject to existing rights all waters within the state belong to the public . . . ." 829 The Water Code requires minimum flows and levels to be protected. 830

- **WASH. REV. CODE §§ 90.14.010 to 90.14.910: Registration, Waiver, and Relinquishment.**

- **WASH. REV. CODE §§ 90.16.010 to 90.16.120: Appropriation of Water for Public and Industrial Purposes.**

- **WASH. REV. CODE §§ 90.20.010 to 90.20.110: Appropriation Procedure.**

- **WASH. REV. CODE §§ 90.22.010 to 90.22.060: Minimum Water Flows and Levels.**

- **WASH. REV. CODE §§ 90.40.010 to 90.40.100: Water Rights of United States.**

- **WASH. REV. CODE §§ 90.42.005 to 90.42.900: Water Resource Management.** The legislature found that Washington was facing a

These provisions establish a trust water rights program and water banking.

- WASH. REV. CODE §§ 90.44.010 to 90.44.520: Regulation of Public Ground Waters.

**Definition of "Navigable Waters":**

Washington recognizes both the "ebb and flow" tidal test and the navigable-in-fact test for title navigability. Thus, a slough was considered navigable when it was navigable during the ebbing and flowing of the tide and has been and can be used as a public highway for boats, scows, and other ordinary modes of water transportation for general commercial purposes, and especially for rafting, booming, and floating and towing of logs up and down the same; that said slough has been so used for at least twenty years.

Washington has used a log floatation test, in combination with the declaration in Article XVII § 1, of the Washington Constitution, to find the Cowlitz River navigable for purposes of state ownership and control. Similarly, Lake Union was declared navigable because it is capable of being navigated. However, "a stream which can only be made navigable or floatable by artificial means is not a public highway." Moreover, the Washington Supreme Court has also applied the federal commerce test of navigability.

The U.S. Supreme Court has declared that the Columbia River is a navigable river under the federal test. As a result, Washington, not the United States, owns the beds and banks of that river on the Washington side of the Oregon-Washington border.
Rights in "Navigable Waters":

In Washington, the ordinary high water mark is the boundary between state and private ownership in navigable waters.\textsuperscript{842} However, "the public has the right to go where the navigable waters go, even though the navigable waters lie over privately owned lands."\textsuperscript{843}

Before Washington changed its policies in 1971 to limit sales and leases of aquatic lands, "the state had sold approximately 60 percent of its tidelands and 30 percent of its shorelands."\textsuperscript{844} Despite the state’s power to engage in such sales and leases, however, "[t]he Legislature has never had the authority . . . to sell or otherwise abdicate state sovereignty or dominion over such tidelands and shorelands."\textsuperscript{845} The state cannot convey this jus publicum, and the state holds such dominion in trust for the public. It is this principle which is referred to as the 'public trust doctrine.' Although not always clearly labeled or articulated as such, our review of Washington law establishes that the doctrine has always existed in the State of Washington.\textsuperscript{846}

Moreover, in general, in every grant of submerged lands "there was an implied reservation of the public right."\textsuperscript{847}

Washington's Shoreline Management Act of 1971\textsuperscript{848} fully meets the requirements of the public trust doctrine.\textsuperscript{849} As such, public recreational docks permitted under the Act do not violate the doctrine.\textsuperscript{850} Similarly, a county ordinance banning personal watercraft in navigable waters did not violate the public trust doctrine, because the doctrine is flexible, the "county had not given up its right of control over its waters," and "the Ordinance is consistent with the goals of statewide environmental protection statutes”; plus, “it would be an odd use of the public trust doctrine to sanction an activity that actually harms and damages the waters and wildlife of this state.”\textsuperscript{851}

\textsuperscript{851.} Weden v. San Juan County, 958 P.2d 273, 283–84 (Wash. 1998). \textit{But see} Biggers v. City of Brainbridge Island, 169 P.3d 14, 22 (Wash. 2007) (en banc) (holding that the Washington Constitution and the public trust doctrine limit local government authority to regulate the shoreline use, and police powers are limited there). \textit{See generally} Ralph W. Johnson, \textit{The Public Trust Doctrine and Coastal Zone
Because the public trust doctrine existed in Washington prior to the Shoreline Management Act of 1971, there could be no regulatory takings claims based on that statute’s limitations on shoreland property’s use.852 “The public trust doctrine resembles a ‘covenant running with the land (or lake or marsh or shore) for the benefit of the public and the land’s dependent wildlife.’”853 As a result, owners along shorelands “never had the right to dredge or fill [their] tidelands, either for a residential community or farmlands.”854

In navigable waters, the public has rights of navigation, fishing, boating, swimming, water skiing, and other related recreation.855 Such other rights probably include boating, bathing, fishing, bowfishing, skating, cutting ice, water skiing, and skin diving.856 However, “in Washington, the public trust doctrine does not encompass the right to gather clams on private property,” because shellfish rights follow title to the submerged lands.857

Nevertheless, Washington’s public trust doctrine is limited to surface navigable waters, and the Washington Supreme Court has refused to apply it to either ground waters or non-navigable waters.858 Moreover, absent specific statutory authorization, state agencies cannot “assume the State’s public trust duties and regulate in order to protect the public trust.”859 As a result, the public trust doctrine does not apply to the Department of Ecology’s implementation of state water law.860

In contrast, Washington has flirted with applying some version of a public trust doctrine to wildlife, especially shellfish. For example, the Washington Court of Appeals has stated that the public trust doctrine applies to the Department of Natural Resources’ regulation of shellfish such as geoducks.861

Pollution Control Hearings Bd., 969 P.2d 458, 467 (Wash. 1999) (holding that, in the water rights context, the public trust doctrine is not an independent source of regulatory authority for the Department of Ecology); Postema v. Wash. Pollution Control Hearings Bd., 11 P.3d 726, 744 (Wash. 2000) (en banc) (same).
861. Wash. State Geoduck Harvest Ass’n, 101 P.3d at 895. But see Citizens for Responsible Wildlife Mgmt. v. Washington, 103 P.3d 203, 205 (Wash. App. 2004) (“No Washington case has applied the public trust doctrine to terrestrial wildlife or resources. But we need not decide whether the
Nevertheless, the Department’s regulation of the commercial geoduck harvest pursuant to the wildlife statutes did not violate the public trust doctrine despite the public right to fish, because the state must “balance the protection of the public’s right to use resources on public land with the protection of the resources that enable these activities,” the Department had not given up its control over the state’s geoduck resources, and the regulation facilitated sustainable geoduck harvesting and natural regeneration of the resource, serving the public interest. Because the state owns the beds of navigable waters and because, under Washington case law, shellfish are considered part of the beds, the Department “has a continuing obligation under the public trust doctrine to manage the use of the resources on the land for the public interest. And [case law] is consistent with the conclusion that shellfish embedded on public property are resources that invoke a public right under the public trust doctrine.”

Wyoming

Date of Statehood: 1890

Water Law System: Prior appropriation

Wyoming Constitution: Wyoming has constitutionalized public rights in water through the constitutional declaration that waters belong to the state. Several other constitutional provisions are also relevant:

- Art. I, § 31: “Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channels, its control must be in the state, which, in providing for its use, shall equally guard all the various interests involved.”
- Art. 8, § 1: Irrigation and Water Rights. “The water of all natural streams, springs, lakes or other collections of still water, within the
boundaries of the state, are hereby declared to be the property of the state.”

- Art. 8, § 2: “There shall be constituted a board of control, to be composed of the state engineer and superintendents of the water divisions, which shall, under such regulations as may be prescribed by law, have the supervisions of the waters of the state and of their appropriation, distribution and diversion, and of the various officers connected therewith. Its decisions shall be subject to review by the courts of the state.”

- Art. 8, § 3: “Priority of appropriation for beneficial uses shall give the better right. No appropriation shall be denied except when such denial is demanded by the public interest.”

- Art. 8, § 4: “The legislature shall by law divide the state into four (4) water divisions, and provide for the appointment of superintendents thereof.”

- Art. 8, § 5: This provision establishes the office of the state engineer.

- Art. 13, § 5: Municipal corporations have authority to acquire water rights.

- Art. 16, § 10: This provision governs the construction and improvement of works for the conservation and utilization of water.

**Wyoming Statutes:**

- Wyo. Stat. Ann. § 35-10-401: This provision prohibits obstruction of a “public river or stream, declared navigable by law,” or pollution of waters.

- Wyo. Stat. Ann. Title 41, Chapter 3: Water Rights. This provision establishes preferences for domestic and transportation purposes, steam power plants, and industrial purposes.\(^{865}\) “The legislature finds, recognizes and declares that the transfer of water outside the boundaries of the state may have a significant impact on the water and other resources of the state. Further, this impact may differ substantially from that caused by uses of the water within the state. Therefore, all water being the property of the state and part of the natural resources of the state, it shall be controlled and managed by the state for the purposes of protecting, conserving and preserving to the state the maximum permanent beneficial use of the state’s waters.”\(^{866}\) These statutes encompass reservoirs (Article 3);

\(^{866}\) Id. § 41-3-115(a).
abandonment of water rights (Article 4); water divisions and superintendents (Article 5); water districts and commissioners (Article 6); water conservancy districts (Article 7); flood control districts (Article 8); underground water (Article 9); and instream flows (Article 10).

- WYO. STAT. ANN. § 41-12-301: Colorado River Compact.

**Definition of “Navigable Waters”:**

The Wyoming Supreme Court acknowledges the variety of definitions of “navigable waters,” including the federal commerce definition, which it uses as the title definition of navigability. The court noted:

> We understand that “navigability in the Federal sense” means the capability or susceptibility of waters, in their natural condition, of being used for navigation in interstate or international commerce, and navigability in any other sense may mean any one of a variety of definitions given navigability by either of the several states of the Union.  

Historical statutes in Wyoming reference transportation and log floatation.  

Regarding public use rights in Wyoming, “the actual usability of the waters is alone the limit of the public’s right to employ them.” Except in federally navigable waters, “the exclusive control of waters is vested in the state,” and hence “[i]t follows that the state may lay down and follow such criteria for cataloguing waters as navigable or nonnavigable, as it sees fit, and the state may also decide the ownership of submerged lands, irrespective of the navigable or nonnavigable character of the waters above them.” As a result, because the Wyoming Constitution gives the waters to the state, fine distinctions of navigability are unimportant. “The test of navigability does not determine other uses to which the state may put its waters even though navigability would determine the title to the land underlying them.”

**Rights in “Navigable Waters”:**

> “[I]f a river is nonnavigable the bed and channel of the stream belong to the riparian owner.”

Nevertheless, in Wyoming, the public has rights in the waters themselves, irrespective of bed ownership. According to the Wyoming Supreme Court:

---

870. Id.
871. Id. at 144.
872. Id.
873. Id. at 145.
At the modern common law, public waters are generally confined to those which are navigable; and public rights therein to navigation and fishery, and privileges incident thereto. In the arid region of this country another public use has been recognized by custom and laws, and sanctioned by the courts—a public use sufficient to support the exercise of eminent domain.\(^{874}\)

Thus, Wyoming waters are public, and the constitutional declaration of state ownership is valid.\(^{875}\)

More expansively, "the Legislature was aware that, without regard to their being navigable or nonnavigable in the Federal sense or any other concept of navigability, [the state’s] waters are usable for purposes other than irrigation, consumption, power or mining and that the waters might be used for transportation by floatation."\(^{876}\) As a result, the public has a right to float in the North Platte River, which was also recognized in the 1959 State Laws of Wyoming.\(^{877}\)

State ownership of the waters themselves impresses those waters with a public trust.\(^{878}\) The public can float craft down any waters so usable, regardless of bed ownership, and can scraped bottom, disembark, and pull the craft over shoals.\(^{879}\) Moreover, members of the public can hunt or fish while floating.\(^{880}\) However, public use rights do not give the public the right to wade or walk on privately owned streambeds.\(^{881}\)
