Recently I suffered the classic author nightmare. I had just packed off the manuscript of my forthcoming sixth edition of Legal Aspects of Architecture, Engineering and the Construction Process to my new publisher, PWS Publishing Co. To relax I decided to browse a recent issue of volume 27 of our sister Public Contract Law Journal. I found a fine student note, on page 117, by Michael D. Garson. He dealt with the Krygoski case1 and terminations for convenience in the federal procurement system. I had discussed that topic in my manuscript at section 34.03(B) by highlighting the famous Torncello case.2 The Krygoski case, he wrote, cast doubt on the plurality opinion in Torncello, which had stated that it would take a change of circumstances to justify use of the power to terminate for convenience. Otherwise, said the plurality, an unlimited power to terminate might make the entire contract invalid because of the one-sidedness created by the power.

I gritted my teeth, but revision it had to be. I added to section 34.03(B) that it was unclear as to the scope of the power to terminate for convenience in federal procurement.

But my troubles weren’t over yet. After I sent in the revision, my eyes lit upon the winter 1998 issue of The Procurement Lawyer (33 PROCUREMENT LAW. 2, at 3 (1998)). It contained a short piece by W. Bruce Shirk. He discussed District of Columbia v. Organization for Environmental Growth,3 a recent opinion by the D.C. Court of Appeals. It added to the termination for convenience confusion. Who has the burden of showing whether the termination had been proper, that is, did the government agency act in bad faith?

It is not my purpose to add to the federal procurement literature. These cases have been and will be the subject of much legal writing. But I want to link the confusion over this power in federal procurement shown by these cases with the decision of the American Institute of Architects (AIA) to insert paragraph 14.4 in A201-1997. That paragraph gives the owner the power to terminate for convenience.

Before I get to that, though, Shirk speaks a number of times of the “private sector interpretation.” He distinguishes the pedestrian private practice construction lawyer from the expert federal procurement specialist. As you will see, this bears on my theme.

But first, let me compare the federal procurement formula for measuring the contractor’s remedy and the one adopted by the AIA. The federal government does not like to pay profit on unperformed work. This would place a restraint on the federal agency’s power to change its mind, the purpose of convenience termination. So the federal convenience termination gives the contractor profit only on work performed. The contractor does not receive his full expectation interest. His restitution interest and reliance interest are protected, including profit on the latter. But he does not get his profit for the entire project.

But AIA Document A201-1997, paragraph 14.4.3, gives the contractor profit on work performed, as well as—I believe—profit on work performed. I do not share Dean Thomson’s belief, as expressed in his Guide to the 1997 AIA Document A201 (Federal Publications, Inc., 1997), that paragraph 14.4.3 can be read to give the contractor only profit on unexecuted work, not on work performed.

If I am right, what is the difference between a default termination (for cause) and one for convenience (without cause)? Since A201-1997, paragraph 4.3.10, requires that each party waive its right to consequential damages (unless paragraph 4.3.10 is deleted), it did not take the termination for convenience to bar consequentials. This expansive remedy may have been needed to get the Associated General Contractors to endorse A201. But why give this power to the owner if the contractor still gets its profit on unperformed work? Looks very much like a default termination, does it not?

The termination for convenience in A201-1997 raises another issue. Will federal procurement jurisprudence (governing by complex regulations, maintaining maximum procurement flexibility, avoiding waste of public funds, barring excess profits, preventing corruption, furthering social and economic objectives, preserving competent defense suppliers, using special dispute resolution, etc.) apply in disputes between private parties?

Bruce Shirk, as I have suggested, draws a distinction between the world of federal procurement and “the private sector.” Will “private sector” construction lawyers be able to handle complicated federal procurement concepts? Will Judge Allworthy in the Wisconsin Circuit Court for Dane County consider decisions from the Claims Court or the Court of Appeals for the Federal Circuit? (I believe he would.)

Even more, will the private owner believe its power is absolute (for convenience and without cause)? But as we have seen, this is not the way federal procurement law sees it. Moreover, if even the smart feds do not seem to agree on the limits to the power, has the AIA added unneeded additional confusion?

It should seem clear by now that I do not think much of the owner having a power to terminate for convenience as given in A201-1997. I would strike paragraph 14.4.

Show Me the Money: Construction Damages (1/98)
The 1998 Forum on Construction Industry/TIPS Fidelity and Surety Law Committee Annual Joint Program explores damages—from the perspective of the Owner, the Contractor, and the Surety—for traditional and design, build projects in litigation and arbitration. It also examines the issue of which parties may be available to pay the damages. These course materials also contain material covering the following issues: Claims for Damages and Defenses; Damages Recoverable in a Design-Build Scenario; False, Inflated and Overstated Claims—What Happens if You Fudge?; Damages in Arbitration; Pleading and Proving Claims for Attorney’s Fees and Costs; Effective Presentation of Damages Testimony, and more.

Sweet on Construction Law (6/97)
"...Hard law need not be dry, desiccated and boring. The Construction World, the backdrop against which this law operates, is hardy boring. It is full of struggles, pain, tension and even laughter. Writing about it should reflect this.”
Professor Justin Sweet
This new book, titled Sweet on Construction Law, is based on a series of lectures. Sweet, a seasoned writer in the field of construction law, departs from the conventional method of legal writing and writes in the conversational manner he uses to captivate audiences in his lectures. He engages you with anecdotes, personal experiences, and heretical opinions about the Construction World. Sweet on Construction will clarify the issues and suggest solutions so you can counsel your client at various stages from planning through completion of construction projects. The book offers you pros and cons on using various types of contracts, cost-methods, and systems when building. It also helps you analyze the strength of your client’s case and predict outcomes when considering litigation.

Design/Build Process: Licensing and Procurement Requirements in the 50 States (6/97)
The design/build method of project delivery has risen in popularity over recent years due, in large part, to the project owner’s desire to limit its exposure for designer-contractor conflicts, and to fast track construction by a single designer-constructor team. Much has been written about the risks and rewards of design/build, particularly with regard to issues that span jurisdictional boundaries.
However, the designer/builder who leaves its home state in pursuit of work faces logistical hurdles as well as the risks discussed above. Design/Build Process: Licensing and Procurement Requirements in the 50 States will help you identify the licensing requirements of its target jurisdiction and ensures that the design/build business entity is appropriately structured. In addition, if it works for public owners, it must ensure that its target clients are permitted to award a design/build contract without running afoul of competitive bidding mandates.

Construction Advocacy and All That Jazz (4/97)
(13th Annual Meeting)
Advocacy takes on many forms. Attorneys serve their clients as advocates in trials and arbitrations as well as in partnering, mediation and court-sponsored settlement conferences. The Forum’s 1997 Annual Meeting focused on Construction Advocacy and presented advocacy in its many forms, with an eye on sharpening lawyering skills and providing pointers on the use of expert witnesses and computer-generated materials. The materials contained in this publication represent a collection of the presentations. The conference was held in New Orleans, April 24-26, 1997.

Hurry up and Slow Down: Dealing with Delays in Construction Projects (1/97)
The materials contained in this publication represent a collection of information presented at the January 23, 1997, conference sponsored annually by the Forum on the Construction Industry and the TIPS Fidelity & Surety Law Committee in New York City. The materials address the subject of delays in construction projects—how to recognize them, analyze them, and how to prove the cost and schedule impacts they cause.

Growing Global: A Practical Guide for North American Firms Offering Goods or Services in the International Marketplace (9/95)
This publication covers how the design, construction, equipment sales and supply of materials are becoming increasingly international. Among the complex impacts of the Canada/U.S. Free Trade Agreement, NAFTA, and the Uruguay Round of GATT, North American firms have obtained greater access to foreign markets. Some companies and their attorneys have adapted to these changes and have reaped the first fruits of a larger market.
PC: 5570045
$125

This two-volume set covers practical information regarding a broad range of subjects related to the design/build system. Presentations focus on select contract, legislative, insurance, and labor law issues. The materials also focus on strategies for prosecuting and defending claims on behalf of the design/build team.
PC: 5570044
$125

I Got Ya' Covered: Insurance and Surety Bonds in the '90s (1/95)
The materials cover a wide range of construction insurance issues and will provide practical tips regarding drafts insurance clauses in construction contracts and the procurement of proper insurance coverage.
PC: 5570043
$125

Changing Role of Construction Counsel in the '90s (10th Annual Meeting—4/94)
What must counsel do to survive in the ‘90s and beyond? These course materials present new tools and skills to better prepare construction counsel to survive and prosper. The materials discuss the: New Responsibilities for the Transactional Construction Counsel; New Techniques to Enhance Persuasion; New Approaches in Analyzing, Budgeting, and Managing Cases by In-house Counsel; and Emerging Role for the Construction Lawyer.
PC: 5570041
$125

Environmental Construction: Market or Minefield? (1/94)
This publication was a presentation by the ABA Forum on Construction Industry and the TIPS Fidelity and Surety Committee. The materials concentrate on the industry in clean-ups, construction work and other environmental law primed to avoid contractor entry into the environmental field, new regulations and requirements for treating demolition debris, NEPA, and other selected regulatory developments.

THE CONSTRUCTION LAWYER
HeinOnline -- 18 Constr. Law. 47 1998
Complete Coverage of 1997 Changes

Designed to save you time trying to isolate the changes that affect you or your clients, this book identifies and analyzes every major and minor change made to the 1997 A201 document. You'll have access to a side-by-side comparison of the 1997 and 1987 documents highlighting each change as well as a paragraph-by-paragraph explanation of each change.

In addition to a brief history and explanation of how and why the changes occurred, this book will also:
- identify every change made to the A201 document
- give you a detailed analysis of the changes
- demonstrate how the changes affect you and the other parties involved
- translate AIA language into practical, meaningful terms.

1998 • 8 1/2 x 11 • 176 pages • paper

Regular Price: $99.95   Forum Members: $89.95

Simplify the task of reviewing and understanding the extensive changes made to the A201—order your copy today.

"This Deskbook is a marvelous tool. Every owner, contractor, architect, engineer, and lawyer who has occasion to use the standard AIA documents should have a copy of this Deskbook and use it."

James P. Groton
Senior Partner, Sutherland, Asbill, & Brennan LLP
