COMMENTARY ON "MULTIEMPLOYER BARGAINING RULES": SEARCHING FOR THE RIGHT QUESTIONS

Jan Vetter*

ONE way of investigating a topic is to look at it in the light of insights gained elsewhere. This is what Professor Douglas Leslie recommends in his very interesting article. He takes a number of ideas that have been developed within the law and economics movement and juxtaposes them with the legal rules governing multiemployer bargaining, specifically with rules applying to withdrawal from multiemployer bargaining units. The outcome of the enterprise is the suggestion of a series of questions having to do with various issues, including the competing explanations of the parties' incentives to adopt multiemployer bargaining (such as "cartelization" versus "wage premium" theory versus "relative wage" theory); the possible sources of transactions costs in collective bargaining (such as "batch" theory and "framing device" theory); and the criteria of choice between "precise" and "multifactored" rules. Although conceding that the questions he has raised are "devilishly difficult," Leslie concludes by expressing confidence that these are the "appropriate questions."

Although I am in no position to be anything other than agnostic to such an economic analysis, I am inclined to hope that these are not the appropriate questions, or at least not the only questions. Leslie’s questions can be answered, if at all, only by extensive study of unions and employers engaged in their customary pursuits. Thus, as they stand, the questions are not very useful to lawyers, governmental agencies, and judges in the ongoing process of fitting doctrine to litigated disputes. Moreover, I do not believe that we have a kennel full of social scientists baying to be set on the trail of these questions. I therefore do not think there is much prospect of usable answers to these questions emerging anytime soon.

A second way to proceed with some subject of interest is to begin by making explicit what we think we know and then to ask where our account seems inadequate or in need of support. In this Commentary, I will briefly attempt this type of investigation and suggest an approach to multiemployer bargaining that contrasts with that by Leslie. I do not mean to imply that what I say will be uncontroversial or universally accepted. I believe, however, that it will come within a familiar range of discourse and thus be readily digestible in the continuing professional dialogue on multiemployer

* Associate Dean and Professor of Law, University of California, Berkeley (Boalt Hall).
bargaining. Further, where my approach leaves unanswered questions, the questions will be, for better or worse, of the kind we are accustomed to addressing in litigation.

I. THE INCIDENCE OF MULTIEMPLOYER BARGAINING

The structural condition necessary to multiemployer bargaining exists where there are two or more competing employers whose employees are represented by the same union. In this setting, the union will most likely try to standardize wages and other terms of employment. This is not because unions generally seek to equalize pay throughout their constituency or within an occupation. On the contrary, unions may very well bargain to discriminate among employers according to ability to pay. When this occurs, however, the discrimination is likely to fall between employers in different businesses, as when job-shop printers are paid less than printers employed by newspapers; or, if it falls within the same business, between noncompeting employers in different markets. Among competing employers in the same market, the union will push for, while it is also pulled toward, the goal of equal pay for equal work. Competition in the product market may leave the parties, both union and employers, with no alternative. At the same time, equal pay for the same work reflects a popular sense of justice widely shared among employees, and its pursuit defines a political mission for the union, while employers do not willingly accept a competitive disadvantage in labor costs even when offsetting advantages allow it. In fact, this preference for equal employment terms has at times prevented unions from tapping an employer’s high profits when a competing employer remained in a relatively weak financial position.¹

If collective bargaining by competing employers with a common union is a necessary condition of multiemployer bargaining, it is plainly not a sufficient condition. In many such situations, multiemployer bargaining does not occur. The union instead conducts parallel negotiations with individual employers for separate agreements while trying, perhaps with considerable success, to standardize their terms. Two questions present themselves: When two or more competing employers are organized by the same union, why is not there always multiemployer bargaining, or, alternatively, why is there ever bargaining in this form?

Multiemployer bargaining is common in both western Europe and in the

¹ For example, through the years that closely similar employment terms were maintained in the United States auto industry, Chrysler’s relatively weak capacity to pay stood immovably between the United Automobile Workers and General Motors’ high profits.
United States, and is reportedly more widespread in the former.\textsuperscript{2} In the United States, the National Labor Relations Board (Board) insists that multiemployer bargaining is conditioned on the consent of the parties.\textsuperscript{3} Although it may be true that powerful unions or dominant employers have sometimes succeeded in conscripting unwilling employers into multiemployer groups, it remains evident that, at least in the United States, parties most often enter into multiemployer relationships willingly and remain in them of their own volition. To the extent that multiemployer bargaining rests on a basis of consent, its existence must be explained in terms of incentives adequate to attract the loyalty of both sides.

To say this, however, seems to propose a paradox (as Leslie notes). Multiemployer bargaining is often thought to enlarge the employers' power relative to that of the union. Why, then, would the union consent to such a reduction in its bargaining strength? If, on the other hand, it is not correct that employers gain strength relative to that of the union by uniting in multiemployer groups, why do employers agree to bargain on this basis? In the next Part of this Commentary, I examine these questions.

\textbf{II. INCENTIVES}

It is said that competing employers may be put at a competitive disadvantage by separate negotiations with the same union.\textsuperscript{4} The union may "whip-

\textsuperscript{2} Compare Schmidt, Industrial Action: The Role of Trade Unions and Employer's Associations, in \textit{Industrial Conflict: A Comparative Legal Survey} 13-15 (B. Aaron & K.W. Wedderburn eds. 1972) (discussing employer's associations in Great Britain); id. at 43-47 (discussing "industry" or "multi-enterprise" agreements in West Germany); XV International Encyclopedia of Comparative Law \textsection\textsection 12-107, -111 (1984) [hereinafter Encyclopedia] (same); Schmidt, supra, at 53 (discussing employer's associations in France); XV Encyclopedia, supra, \textsection\textsection 12-191 (same); Schmidt, supra, at 35-36 (discussing employer's associations or "confederations" in Sweden and other Scandinavian countries); XV Encyclopedia, supra, \textsection\textsection 12-156, -161 (same) with Schmidt, supra, at 22-23 (discussing multiemployer bargaining arrangements in the United States); XV Encyclopedia, supra, \textsection\textsection 12-223, -232 (same). For more recent statistics on the number of multiemployer agreements in the United States, see Bureau of Labor Statistics, U.S. Dep't of Labor, Bull. No. 2065, Characteristics of Major Collective Bargaining Agreements—Jan. 1, 1978, at 12 table 1.8 (1980), cited in Charles D. Bonanno Linen Serv., Inc. v. NLRB, 454 U.S. 404, 410 n.4 (1982).

\textsuperscript{3} The Board will not establish a multiemployer unit over any party's objection, see United Fryer & Stillman, Inc., 139 N.L.R.B. 704 (1962), and the Board has held that the use of economic force to compel other parties to bargain on a multiemployer basis violates the right of each party to select its own bargaining representative. See United Mine Workers, Local No. 1854 (AMAX Coal Co.), 238 N.L.R.B. 1583 (1978).

\textsuperscript{4} See, e.g., A. Cox, D. Bok & R. Gorman, Cases and Materials on Labor Law 303 (10th ed. 1986) ("The multiemployer pattern may reflect the desire of several small employers who seek greater leverage in dealing with a single common union . . . ."). For a good general discussion of several of the suggested motivations for multiemployer bargaining, see id. at 303-06.
saw” the employers by striking against them in sequence, one at a time. As the union strikes against each employer while the employer’s competitors continue operations, the diversion of the struck employer’s customers places it under great pressure to make concessions to the union. Meanwhile, the union expends less of its resources than it would have expended in a strike against all the employers. By exploiting the whipsaw tactic, the union extends uniform terms throughout the product market at a higher level than it could have reached if it had confronted all the employers at once in a straightforward test of economic strength. Multiemployer bargaining, it is argued, legitimizes the lockout—that is, when the union strikes against one employer, the others can respond by locking out their employees, treating a strike against one as a strike against all. In maintaining discipline in the face of a whipsaw strike (that is, by locking out), the nonstruck employers can prevent the union from enlisting them as unwilling allies against the struck employer, as well as raise the union’s costs of striking.

If this analysis is accepted, it may explain why employers are willing to join in a multiemployer bargaining unit, but at the cost of making a puzzle of the union’s consent. If the union’s choice is between obtaining uniform terms through a single negotiation with the multiemployer group or achieving higher uniform terms through separate, parallel negotiations with the employers individually, the union might be expected to choose the latter alternative.

Before advancing some additional considerations that may push unions toward multiemployer bargaining, I should qualify somewhat the argument just presented to account for employers’ interest in this bargaining structure. In saying that multiemployer bargaining “legitimizes” the lockout, I am invoking an underlying assumption that employers can lock out to counter a whipsaw strike only in the-setting of formal multiemployer bargaining. The legal history of this assumption, however, is more complicated.

In 1950, in its first ruling on the lockout as a response to the whipsaw strike in multiemployer bargaining, the Board held the tactic to be illegal. At that time, the Board considered any lockout to be an unfair labor practice unless it fell within a narrowly defined “defensive” category, such as a lockout to preempt a strike that would cause exceptionally severe operational losses. The Board’s unwillingness to characterize multiemployer lockouts as defensive (and thus permissible) met an unsympathetic reaction in the federal courts of appeal. Because of this reaction, and perhaps because of a

change in the Board’s membership following the replacement of a Demo-
cratic with a Republican administration in 1952, the Board in 1954 changed
its view, and the United States Supreme Court ultimately agreed with the
changed position in 1957, upholding the legality of the multiemployer lock-
out.8 The next important development occurred in 1965, when the Court
collapsed the Board’s distinction between “defensive” and “offensive” lock-
outs and upheld the lawfulness of a single employer’s lockout designed sim-
ply to exert economic pressure on the union for the purpose of winning
concessions from the union in collective bargaining.9 As the Board quickly
recognized, the Court’s decision seemed to imply that an employer could
lock out employees represented by a union that had, in separate negotia-
tions, struck against a competing employer over a similar demand.10 In effect,
pursuant to the Court’s 1965 decision, it would appear that an employer
may lock out in what can be only functionally defined as a multiemployer
bargaining situation, as well as in one formally established by mutual
consent.

In sum, the legality of the multiemployer bargaining lockout was not
clearly established until 1957, and the Board clearly and decisively distin-
guished between lockouts in formally and functionally defined multiem-
ployer settings from only 1957 to 1965. Before 1957, unions did not
necessarily lose legal protection against lockouts by agreeing to multiem-
ployer bargaining, and since 1965 they have not necessarily maintained such
protection by withholding agreement. Notwithstanding the lockout’s legal
vicissitudes, multiemployer bargaining has been a common practice over the
entire period.

This history suggests two points. First, even though the parties may
attach great importance to the prospect of whipsaw strikes and the availabil-
ity of lockouts in response, these factors are not the only, nor necessarily the
dominant, considerations influencing the parties’ choices. Second, over at
least most of the post-World War II period, unions, in agreeing to multiem-
ployer bargaining, have not given up as much as might be supposed. Before
1957, they could hope that they gave up nothing. Since 1965, there may
have been nothing to give up.

It may be true, nevertheless, that by entering into multiemployer bargain-
ing, unions may significantly enlarge the scale of any conflict that may
occur. Further, by bargaining with employers’ associations, they may settle

on terms less favorable than might have been won by bargaining separately with individual employers. There are, however, offsetting considerations. The union aims to standardize terms of employment, and joint bargaining for a single agreement greatly facilitates achievement of that goal. Many negotiations are reduced to one. The employers hammer out among themselves, rather than with the union, their different rankings of the issues that make up the bargaining agenda. A single agreement imposing uniform terms on all employers greatly simplifies administration of the relationship. Where there are many small employers or employees working short periods for different employers, as in construction and stevedoring, creation of a single unit aggregates employees into a base large enough to support group benefit plans. The efficiencies of multiemployer bargaining may benefit union officials, as well as the union’s membership, because part of the gain generated by the officials’ increased productivity no doubt accrues to them as higher compensation.

In addition, multiemployer bargaining enhances the union’s protection against rival unions, disaffected employees, and hostile employers. When bargaining is conducted on a single employer basis, the employees of each individual employer constitute the relevant group for determining representation. When the union and a group of employers agree to joint bargaining, the appropriate unit expands to include the union-represented employees of all the employers. Consequently, a rival union must organize a much larger group of employees if it hopes to replace the incumbent union as collective bargaining representative. The union can no longer be decertified by vote of the employees of one employer but only by a vote of employees in the multiemployer group as a whole. No individual employer can withdraw recognition of the union on the ground that it no longer represents a majority of that employer’s employees; rather, it is majority standing in the overall group that counts.

It is also possible that in some situations bargaining on a multiemployer basis increases the employers’ willingness to make concessions. Their competition with each other may not allow significant variation in labor costs, but if all competitors unite in the multiemployer group under one agreement, none of them is placed at a competitive disadvantage when they jointly make uniform concessions to the union. If they bargained individually, however, each employer would fear that it might give more than another employer and would therefore resist the union’s demands more strongly.

Finally, in examining union incentives to grant or withhold consent to multiemployer bargaining, it is useful to recognize that it may not be best to describe unions narrowly as economic institutions. We might conceive of unions as institutions trying to reach the combination of total employment and level of compensation that maximizes the employers’ labor costs. We
are probably better advised, however, at least for some purposes, to consider unions as political institutions more interested in producing some level of satisfaction among their membership than in maximizing the return to their economic strength. Although multiemployer bargaining may reduce the efficacy of the whipsaw strike and decrease by some uncertain and speculative amount the economic gains of the union's constituency, it may also better satisfy that constituency's sense of equity by more reliably standardizing terms of employment and by doing so at a lower level of conflict.

The incentives for employers to form a multiemployer unit have already emerged. Competing employers gain protection against disadvantageous differentials in labor costs. In addition, by engaging in multiemployer bargaining, employers avoid the difficulties that result from separate bargaining, such as gauging just the right mix of resistance and concession. Further, with multiemployer bargaining there is no legal risk in locking out, and there is a preexisting, mutual commitment to do so if the union should resort to a whipsaw strike.

III. DISINCENTIVES

Given all of these perceived benefits of multiemployer bargaining, the question remains why it is not more widespread than it is. There may be many reasons, varying from one situation to another, why parties on either side might withhold consent. Two possible cases will be suggested here. First, when a union represents the employees in an oligarchic industry, it may try to induce the few, prosperous employers to share their monopoly rents with their unionized employees. In this situation, parallel negotiations combined with the whipsaw strike may be most effective in securing large, uniform gains at a tolerable cost, and, thus, the union will be inclined to resist multiemployer bargaining. Second, in markets with one dominant firm, single employer bargaining may be one means by which that firm realizes the advantages of its position. This case may be illustrated with a hypothetical instance that shared some common features with the United States auto industry until recently.

Let us suppose that one firm, General Motors (GM), is dominant and is twice as large as its nearest competitor. The heavy costs of striking against GM will deter the union from doing so. (For example, strike benefits are expended at twice the rate of a strike against the next largest firm.) Consequently, the union will usually select a competing firm as the target of a whipsaw strike through which it will try to set the pattern for the industry. In settling with the target firm, however, the union will be careful not to settle at a level higher than GM is willing to accept; if GM was a formidable

---

11 For development of this view at length, see A. Ross, Trade Union Wage Policy (1948).
opponent earlier, it is doubly so after the union has waged a strike elsewhere. Indeed, it would not be startling to find some communication between the union and GM about the acceptable size of the settlement at the target firm.

Under these circumstances, there may be little incentive for the dominant firm to enter into multiemployer bargaining. In separate bargaining, the dominant firm's direct losses due to strikes will, over time, be less than that of its competitors, and its influence on the outcome of bargaining will remain predominant. Moreover, the dominant firm can more easily preserve some terms it has negotiated that are more favorable than those negotiated with other firms.

IV. THE BONANNO CASE

In his article, Leslie applies his theoretical apparatus to a recent United States Supreme Court decision, *Charles D. Bonanno Linen Service, Inc. v. NLRB.* In this case, the union struck against Bonanno Linen Service (Bonanno), a member of a multiemployer group, after an impasse had been reached during negotiations for a new collective bargaining agreement. In response, “most” of the other ten members of the group locked out. Several months later, Bonanno, having permanently replaced its striking employees and resumed operations, announced its withdrawal from the multiemployer group. The other employers ended the lockout and over the next several months negotiated an agreement with the union. The Board held that the agreement bound Bonanno because its withdrawal had been untimely and thus ineffective.

Under established Board doctrine, once parties consent to multiemployer bargaining, they can withdraw only if they give adequate notice to the other parties before the scheduled date of negotiations for a new agreement or before the actual commencement of negotiations. Once negotiations have commenced, withdrawal is not permitted absent “mutual consent” or “unusual circumstances.” “Unusual circumstances” have been limited to cases of extreme financial pressure on an employer or extensive fragmentation of the unit through withdrawals that had occurred without objection. Bonanno would have added cases in which impasse had been reached in bargaining to this categorical exception. The Board rejected this position,

Leslie is uncertain how Bonanno should have been decided because he lacks the information required to characterize adequately multiemployer bargaining within the theoretical scheme he outlines. I would be willing to support on narrow grounds the Board's ruling that, because Bonanno's attempted withdrawal was untimely, it should be held to the agreement eventually negotiated. The argument in support of a right of employer withdrawal on impasse, developed in several cases in the federal courts of appeal and adopted in Chief Justice Burger's dissenting opinion in Bonanno, was that such a right balances the union's right to use the whipsaw strike and to enter into interim agreements with defecting employers. I would say that granting the right of withdrawal on impasse is arbitrary in relation to the policy these courts would serve of matching the employers' arsenal with that of the union. What might arguably follow from the view that whipsaw strikes and interim agreements create an imbalance of power in favor of the union would be a rule that employers could withdraw on the occurrence of these events. Bonanno's attempted withdrawal may well have been motivated instead by a desire to challenge the union's majority status in a unit confined to its own employees, who were strike replacements and could be presumed to be hostile to the union.

V. CONCLUDING COMMENTS

The Bonanno case and Leslie's discussion of it raise a more general issue: Do the Board's rules too tightly constrain withdrawal from multiemployer bargaining? I share Leslie's uncertainty. I do believe that effective bargaining requires a stable framework, and this implies restraints on withdrawal, although not necessarily just the ones the Board has adopted. Moreover, I would probably ask questions different from, though not necessarily opposite to, those offered by Leslie. I would be influenced mostly by indications that the Board's interpretations of the National Labor Relations Act led to large-scale defections from multiemployer bargaining, either by unions or employers. This is because I think that the history of the Taft-Hartley amendments to the Act in 1947 established a place for multiemployer bar-

18 Bonanno, 454 U.S. at 412.
20 See 454 U.S. at 423-25.
gaining within the regime of industrial relations that the Act sponsors. Whether that notoriously elusive phenomenon—an imbalance of power—exists as such seems to me largely irrelevant within the general scheme of the Act.
