Mental Incapacity and Liability
Insurance Exclusionary Clauses:
The Effect of Insanity upon Intent

Catherine A. Salton†

Insurance coverage is usually denied where an individual intentionally causes damage to persons or property. The analysis becomes more complicated, however, where the mental capacity of the insured is in question. Courts have used a number of tests to examine the mental state of an insured in order to determine whether she could form the requisite intent. This Comment begins by examining the judicial confusion and inconsistency in applying these tests. The author argues that the existing tests are unsatisfactory, both in their formulation and in their application. The author proposes a new test for ascertaining mental capacity of an insured, one that will provide consistency, avoid confusion, and accord with the public policy of insurance.

When an individual who has purchased a standard liability or homeowner's insurance policy purposefully causes property damage or personal injury, an exclusionary provision within his policy generally denies coverage for the consequences of his act on the grounds that the harm was caused intentionally. When the mental capacity of the insured is in question, both the determination of intent and the application of the intentional act exclusionary clause are difficult. Courts have responded to this problem by developing various insanity "tests" to discern whether an insured was so mentally impaired that his acts could not be viewed as "intentional."

However, the courts are in conflict on the proper criteria to use to define insanity within each test. Courts have developed two basic lines of authority on the issue. Generally, the first view holds that if an injury results from an insane act, the intentional injury clause is inoperative and the insurer is liable. The other view holds that an injury inflicted by an insane person may be "intentional" where the actor understands the physical nature and consequences of the act, even though he is incapable

† B.A. 1985, University of Rochester; J.D. 1990, Boalt Hall School of Law, University of California, Berkeley. The author would like to thank Professor Justin Sweet and Michael Page for their assistance.
of distinguishing right from wrong. While these are the two basic positions courts have adopted, courts do not hesitate to alter their language from case to case. As a result, there is considerable confusion and inconsistency in this area of the law. This Comment will argue that the current tests are unsatisfactory, and that there is a need for a single test to determine mental incapacity for the purposes of intentional act exclusionary clauses. This Comment will offer a workable, alternative test for the courts.

Part I of the Comment will discuss the purposes of intentional act exclusionary clauses in insurance policies, the relevant doctrines and public policies involved in insurance law, and the determination of intent in cases where insanity is not at issue. Part II will explain the foundations of the treatment of insanity in insurance cases through an examination of the different approaches taken under tort and criminal law. Part III will identify and compare the various tests the courts have applied to determine whether an act performed by an insured whose mental capacity is in question was intentional for the purposes of insurance coverage. Part III will also argue that the various tests used by the courts in this situation are substantially flawed. Finally, the Comment will propose an alternative test designed to avoid the problems of the existing tests, provide consistency of results, and remain in accordance with the fundamental public policies behind insurance law.

I
INTENTIONAL ACT EXCLUSIONARY CLAUSES: POLICY BACKGROUND AND APPLICATION

A. Policy Background

Liability insurance policies are designed to furnish coverage for legal liability incurred by an insured as a result of unintentional and unexpected property damage and/or personal injury.¹ Actual policy language implements this design in two ways: (1) it restricts coverage to injury or damage resulting from an "accident"; and (2) it excludes from coverage injuries and damage that are "intended or expected" by an insured.² The

². DiMugno, Insurance Coverage for Intentional and Criminal Acts: An Overview, 1 INS. L. BRIEFINGS 151, 152 (1988). It is important to note that the standard policy language for liability insurance has undergone substantial change over the last twenty-five years. Prior to 1966, liability policies generally stated that damage or injury would be covered by the policy only if it was "caused by an accident which occurs during the policy period." Id. at 153. Any duty of the insurer to defend or indemnify the insured was restricted by this "accident" requirement. Note, Intentional Injury Exclusion Clauses—What Is Insurance Intent?, 32 WAYNE L. REV. 1523, 1524 (1986) (authored by Kristin Wilcox). Due to the difficulties encountered by the courts in construing the word "accident"—including conflicting opinions on whether the term was to be understood from the
typical general business liability policy, which covers only liability incurred in the course of doing business, combines these two conditions within a single coverage clause. The typical individual policy, such as a homeowner's or renter's policy, contains personal liability coverage for liability incurred by an individual personally. Unlike business liability policies, individual policies generally do not exclude intentional or expected injuries within the coverage clause. Instead, most of these policies have a separate clause that excludes coverage for injuries or damage intentionally caused by the insured. This separate provision is generally called an intentional injury exclusion clause.

Recognizing that the fundamental purpose of insurance is to protect against accidental events, courts have generally accepted intentional injury exclusion clauses as valid limitations on liability. The reasons for this acceptance are manifold, ranging from simple economics to theories of "moral hazard" and deterrence. One important reason is that insurers calculate the premiums for policies based on the probabilities of accidental losses. If the policy covered intentional losses, the insured would be in control of the risk, thereby denying the insurer the ability to fix rates fairly and efficiently.

A closely related reason is that of "moral hazard," which assumes that an individual who has insurance coverage for his intentional wrongdoing will be more likely to perform such acts.

---

3. DiMugno, supra note 2, at 153. The coverage clause is the section of the policy that actually grants coverage. The 1966 revised standard policy language, see supra note 2, is an example of a coverage clause that excludes intentional injury or damage.

4. DiMugno, supra note 2, at 153.

6. Id. at 154.

8. DiMugno, supra note 2, at 152.

10. J. APPLEMAN & J. APPLEMAN, INSURANCE LAW AND PRACTICE § 4492.01, at 21 (W. Berdal ed. 1979). One could hardly expect an insurance company to calculate effectively the probability of intentional losses.

11. See Forster & Steinmüller, An Alternative View of Moral Hazard, 45 J. RISK & INS. 531 (1978) (a moral hazard in insurance implies that, under the policy, the class of insureds will incur higher losses than it would if it were not insured); see also W. YOUNG & E. HOLMES, INSURANCE CASES AND MATERIALS ON THE LAW OF INSURANCE 137 (2d ed. 1985) (moral hazard refers to the
third reason, which ignores the effect on insurers, is based upon the well-established public policy prohibiting insureds from indemnification for injury or damage caused by their own intentional wrongful acts.12 This policy justification often supports judicial endorsement of intentional act exclusion clauses. In fact, this public policy has gone beyond judicial application to statutory codification in two states.13

Two rationales support the prohibition against indemnifying an insured for her intentional wrongful acts. First, and perhaps clearest, is a general, societal interest in deterring wrongful conduct on the part of the insured.14 As one commentator has noted, "a tortfeasor should not . . . be encouraged to commit intentional torts knowing that [her] mischief will be underwritten by an insurer."15 The second, related rationale is that of punishing the intentional tortfeasor by forcing her to bear the financial consequences of her acts.16

While policies favoring denial of coverage for intentional acts may seem fair, they conflict with the policy favoring the compensation of innocent victims.17 Often, the person who inflicts damage or injury is not financially capable of compensating the victim out of pocket; therefore, the victim's only opportunity for payment may depend on access to the

13. See CAL. INS. CODE § 533 (West 1990) ("An insurer is not liable for a loss caused by the wilful act of the insured; but he is not exonerated by the negligence of the insured, or of the insured's agents or others."); N.D. CENT. CODE § 26.1-32-04 (1989). This longstanding public policy is also reflected in the California Civil Code: "All contracts which have for their object, directly or indirectly, to exempt anyone from responsibility for his own fraud, or wilful injury to the person or property of another, or violation of law, whether wilful or negligent, are against the policy of the law." CAL. CIV. CODE § 1668 (West 1990).

wrongdoer's insurance coverage. 18

Various principles of contract interpretation work in concert with this compensation policy, and courts often rely upon these principles to support compensation of the injured party. In accordance with the contract doctrine of *contra proferentum*, 19 courts have taken the position that ambiguous exclusionary provisions are to be strictly construed against the insurer. 20 Under this reasoning, the insured is entitled to protection to the fullest extent that any reasonable interpretation of the exclusionary clause will permit, especially when the conduct insured against involves possible injury or damage to innocent third parties. 21

The *contra proferentum* doctrine has been applied with particular force to insurance policies. As one court pointed out, insurance contracts are "drawn for the company by men learned in the law of insurance"; 22 it is unlikely that the hapless purchaser of the policy will be equally educated. Also, insurance policies, especially homeowners' and renters' policies, are standardized, with very little opportunity for a typical insured to negotiate the terms. 23 In other words, insurance policies contain all the elements of adhesion contracts.

Other interpretation doctrines that have been used to restrict the scope of exclusionary clauses include the doctrine of plain meaning, by which courts construe policy language according to the understanding of the average person who buys the policy, 24 and the related doctrine of reasonable expectations, which protects the reasonable expectations of a policy purchaser even where there is no ambiguity in the policy language. 25

---

18. See Note, supra note 2, at 1528. This commentator also notes that courts may be more comfortable with finding coverage and thus placing the burden of the loss on the insurer, rather than denying coverage and shifting the loss to the insured or to the victim. *Id.*

19. This doctrine provides that where a court must choose among the reasonable meanings of terms in a promise or agreement, the preferred meaning is the one that operates against the party who supplied the terms. *Restatement (Second) of Contracts* § 206 (1981). It is important to note, however, that ambiguity is necessary before the doctrine of *contra proferentum* applies. If the language of the contract is clear and unambiguous, a court must give effect to that language. See *W. Young & E. Holmes, supra* note 11, at 55-56, and cases collected therein.

21. See, e.g., *Lyons*, 131 Ariz. at 340, 641 P.2d at 254 (quoting *Ruvolo*, 39 N.J. at 498, 189 A.2d at 208-09) ("[I]ustice demands that particular emphasis be laid on that doctrine where the conduct insured against involves possible injury or damage to members of the public."); *Rodef Sholom*, 91 Cal. App. 3d at 697, 154 Cal. Rptr. at 352.

24. See *W. Young & E. Holmes, supra* note 11, at 55-56, and cases collected therein.

Courts have had to keep these competing sets of policies and doctrines in mind as they have attempted to interpret the meaning of "intent" for the purposes of applying intentional injury exclusion clauses. The next Section provides a background of the courts' approaches to determining intent when mental capacity is not at issue.

B. Application of the Policy—Determining Intent When the Insured Is Not Insane

In cases where an insured is not insane, courts have generally taken one of three positions on the meaning of "intent" for the purpose of interpreting insurance exclusionary clauses. The majority viewpoint interprets "intent" as requiring that the insured both intended to perform the act that caused the harmful result and intended that some injury or damage occur from that act. This viewpoint has been called the subjective intent standard, and as of 1986, approximately twenty-eight states had applied this test. As an alternative to the requirement that the insured actually intended to cause harm, some courts using the subjective intent standard have used a related "inferred intent" standard. Under this standard, even though the insurer may not be able to prove that the insured intended some injury or damage to occur, courts will infer that intent when the insured's intentional act was of such a nature that harm was substantially certain to result.

A second position, which may be called the "specific subjective intent" standard, is closely related to the first formulation. This standard also requires that the insured intended to perform the act. However, instead of demanding that the insured intended some general injury, the specific subjective intent formulation requires that the insured intended to inflict the precise injury or damage that in fact resulted. This con-

961, 966-68 (1970). Keeton writes, "The objectively reasonable expectations of applicants and intended beneficiaries regarding the terms of insurance contracts will be honored even though painstaking study of the policy provisions would have negated those expectations." Id. at 967. For a thorough discussion of Keeton's views and the doctrine of reasonable expectations, see Rahrert, Reasonable Expectations Reconsidered, 18 CONN. L. REV. 323 (1986). Although at first glance it seems unlikely, the doctrine has been used as a sword to deny coverage, see, e.g., American Family Mut. Ins. Co. v. Peterson, 405 N.W.2d 418, 419 (Minn. 1987) (holding that it would not have been reasonable for the insured to expect his policy coverage to include acts committed while voluntarily intoxicated), as well as a shield to preserve it, see, e.g., Mara v. Fire Ins. Exch., 222 Cal. App. 3d 590, 271 Cal. Rptr. 620 (1990).

28. See Note, supra note 2, at 1531 n.47.

29. See id. at 1532.

struction provides the widest coverage for an insured, because the exclusionary clause does not apply if the consequences of an act are not exactly what the insured had in mind.31

The third position used by some courts is the objective intent standard.32 Under this rule, courts deny coverage when they find that a reasonable person would have foreseen harm from the given act.32 Courts presume that the insured intended the natural and probable consequences of his acts,34 thus judicially injecting the traditional tort doctrine of foreseeability into insurance intent litigation.35 Naturally this position results in fewer decisions awarding coverage.

Although these three views appear relatively easily separable, in practice they are not. For example, in one case the Arizona court described its test as follows: "[I]f the injury results from the natural and probable consequences of the intentional act, the subjective intent of the actor is simply immaterial—the exclusion applies."36 This test has been described as "subjective" by one commentator and "objective" by another.38 One commentator suggests that many courts have confused their terminology in attempting to apply a given test.39

Thus, even when the capacity of the insured is not at issue, the application of intentional act exclusion clauses has proven difficult. When, however, a question arises as to the insured's capacity, the application becomes even more difficult because the above-described tests have been largely abandoned. As this Comment will show, the overwhelming majority of reported opinions do not use these tests as described when dealing with an insured who is insane.40

In the case of either the subjective intent standard or the specific subjective intent standard, the reason for this abandonment is clear. The subjective intent to perform a harmful act to cause some injury

31. See Rajspic, 110 Idaho at 733, 718 P.2d at 1171; R. JERRY, supra note 26, at 306.
32. See Note, supra note 2, at 1534. As of 1986, the objective intent standard had been applied in approximately ten states. See id. at 1534 n.65.
33. Id. at 1530.
34. Id. at 1534.
35. See id. at 1534 & n.66; see also R. JERRY, supra note 26, at 306.
37. See Note, supra note 2, at 1531 n.47.
38. See Note, supra note 15, at 1047 (1982). This confusion may have been caused by the Steinmetz court's usage of an inferred intent standard, which the author of Note, supra note 2, perceives as "objective," but which the author of Note, supra note 15, perceives as an alternative element of the "subjective" test.
39. See Note, supra note 2, at 1535-39 (discussing the confusion in terminology evidenced in different opinions in the Illinois courts and the problems that confusion creates in predicting the outcome of a given case).
40. See infra text accompanying notes 130-234.
41. See supra text accompanying notes 27-29.
42. See supra text accompanying notes 30-31.
presumes the insured's capacity to form an intention; the focus is on whether only the act, or whether the act and an injury (generally or of a specific type) were intended. In a case where the insured may have been insane or intoxicated, the focus of the court's attention must shift to the actual condition of the insured to determine whether he was mentally capable of formulating an intent at all at the time of the wrongful act.

The rationale for a separate test for insane insureds is less clear when the standard used is that of objective intent, or the inferred intent standard occasionally used in subjective intent jurisdictions. Under either of these standards, the actual intent of the insured to cause harm is not relevant to a finding that the exclusion clause applies, because the courts will presume that the insured intended the natural and probable consequences of his acts. If the actual intent of the insured is immaterial under these rules, a mental illness of the insured which may have negated the capacity to form the intent should also be immaterial.

The specialized tests that courts apply to insane insureds bear little resemblance to those applied to other insureds. In order to understand the foundation for these tests, it is useful to examine the treatment of insanity under tort and criminal law.

II
VIEWS OF INSANITY UNDER TORT AND CRIMINAL LAW

A. The Treatment of the Insane Under Tort Law

As a general rule in tort law, insane or mentally retarded individuals are liable for the torts they commit. The vast majority of courts have

43. See supra text accompanying notes 29-35.
44. See Note, supra note 2, at 1530-31 ("It is irrelevant that the insured did not actually intend harm, for it is assumed she intended the natural and probable consequences of her acts.").
adopted this position; five states have statutorily codified it, and it is the official view of the Restatement (Second) of Torts.

This general rule is applied to both negligent and intentional torts. In the area of negligent torts, a mentally disturbed person is expected to comply with the objective "reasonable man" standard, a standard that presupposes both reasonableness and emotional stability. The rule holding insane individuals responsible is almost invariably applied with respect to intentional torts as well, although there is some authority holding that an insane person may not have the mental capacity to form the specific intent that is an essential element of certain intentional torts, such as malicious prosecution, alienation of affection, misrepresentation, and defamation. When the intent required to create liability for a given tort is less sophisticated, insane persons will be held liable. Furthermore, a majority of courts hold insane individuals liable for their intentional killings in wrongful death actions.

The principles behind this nearly monolithic viewpoint on the tort responsibility of insane persons are both long-established and long-contested. Justifications of the general rule have included the following:

46. Louisiana appears to be the only state whose courts impose no liability on insane tortfeasors. See Yancey v. Maestri, 155 So. 509, 515 (La. Ct. App. 1934) (adopting the "well-recognized rule or precept of civil law, that an insane person is not liable in damages for his tortious acts"). However, one subsequent Louisiana decision may have cast some doubt on the continuing validity of Yancey. In Von Dameck v. St. Paul Fire & Marine Insurance Co., 361 So. 2d 283, 289 (La. Ct. App.), cert. denied, 362 So. 2d 794 (La.), cert. denied, 362 So.2d 802 (La. 1978), the court specifically refused to comment on the continuing validity of the case. One court has taken the position that insanity may be a defense to a negligence cause of action where the actor is suddenly, without forewarning, overcome by a mental disability or disorder that prevents him from conforming to the "reasonable man" standard. Breunig v. American Family Ins. Co., 45 Wis. 2d 536, 542, 173 N.W.2d 619, 623 (1970). However, other courts have long rejected this "sudden insanity" defense. See, e.g., Kuhn v. Zabotsky, 9 Ohio St. 2d 129, 133, 224 N.E.2d 137, 141 (1967); Sforza v. Green Bus Lines, Inc., 150 Misc. 180, 181-82, 268 N.Y.S. 446, 447-48 (N.Y.C. Mun. Ct. 1934).

50. See Ellis, supra note 45, at 1081.

51. See PROSSER & KEETON, supra note 45, § 135, at 1074.

52. See Ellis, supra note 45, at 1081 n.12.

53. Curran, supra note 45, at 54-55 (noting that insane persons have been held liable for the intentional torts of trespass to land, conversion, and assault and battery).

54. See id. at 56-57.

55. See id. at 54 & n.12 (noting that this policy was already established in cases dating back to 1845).

56. PROSSER & KEETON, supra note 45, at 1073. For a thorough discussion of the weaknesses of traditional tort rationales about the mentally disabled, see Ellis, supra note 45, at 1084-1109.
The fairness of holding that "where one of two innocent persons must suffer a loss, it should be borne by the one who occasioned it";\(^5\)

2. The encouragement of custodians or caretakers to be vigilant over the care of insane persons;\(^5\)

3. The prevention of dishonest defendants from capitalizing on the difficulty of identifying actual mental illness by successfully feigning insanity to avoid liability for harmful acts;\(^5\) and

4. The complications and difficulties of introducing insanity defenses as used in the criminal law into tort doctrine.\(^6\)

Insurance law generally does not follow the tort position because of the public policies specific to insurance law.\(^6\) However, these policies are not totally unrelated in spirit to some of the tort justifications. For instance, the insurance approach, which stresses the policy interest in awarding compensation to victims of attacks by insane persons,\(^6\) is in accord with the tort law emphasis on the compensation of victims (number 1 above). As another example, the deterrence rationale underlying exclusionary clauses themselves\(^6\) is ill-served by denying coverage to insane insureds, because an individual who lacks the mental capacity to conform his behavior to acceptable standards will not be deterred by the nonexistence of insurance coverage for the harm he inflicts.\(^6\) This reasoning does not conflict with the "vigilance" rationale often advanced in tort law (number 2 above), because one aspect of a custodian's duty to protect third parties against harm from an insane person could be to obtain insurance against the harmful results of the insane person's acts. Lastly, various doctrines such as plain meaning and contra proferentum\(^6\) apply in insurance law, since it is based upon the existence of a contract, whereas they do not operate within the tort context. These

---

\(^5\) See supra text accompanying notes 19-25.
contract doctrines also apply, as several courts have pointed out, to ensure that the purpose of insurance not be defeated.\textsuperscript{66} After all, one of the purposes of obtaining insurance is to provide coverage for the injuries for which the insured is liable.

Perhaps these policies unique to insurance law have encouraged courts to reject the strict responsibility position that tort law takes toward the insane. In rejecting the tort position, the courts embrace an approach very similar to that taken in criminal law: they accept the concept of an insane person's nonresponsibility for his act. Courts in insurance litigation have ignored the public policies relied upon in tort in order to avoid the complexities of determining insanity (numbers 3 and 4 above). Not unexpectedly, the courts in insurance litigation have adopted many of the concepts, approaches, and even the language used in criminal cases where the defendant is insane.\textsuperscript{67}

In order to explore the deep-seated relationship between the treatment of insanity in criminal and insurance litigation, the next Section will examine the various approaches criminal law has employed in cases of insanity, and will then describe the history, problems, and strengths of insanity tests that have been applied in criminal cases.

**B. The Treatment of the Insane in Criminal Law**

The criminal law approach to the problem of the insane wrongdoer differs significantly from the tort law approach. For centuries, insanity has been treated as a moral and legal excuse.\textsuperscript{68} The rationale for this treatment of insanity rests upon the basic foundation of criminal law itself—that individuals are responsible for their actions. Mental illness, as seen in traditional criminal doctrine, functions to limit the extent to which a person can be held responsible for what he does.\textsuperscript{69}

Two traditional conceptions of nonresponsibility—nonculpable ignorance and compulsion—underlie this perception of insanity as an excuse.\textsuperscript{70} The 1955 Tentative Draft of the Model Penal Code gives an example of the nonculpable ignorance condition in an insane person.

---

67. See infra text accompanying notes 130-234.
69. See id. at 25. In a similar vein, noted commentator Herbert Fingarette has stated: "[The criminal defense of insanity] expresses, in however awkward and circumscribed a way, the principle that one who has lost his reason may not be criminally condemned, that the criminal law is a law for those who can be held responsible for what they do." H. FINGARETTE, THE MEANING OF CRIMINAL INSANITY 7 (1972). Another commentator frames this conception in the language of free will. "The legal system . . . is based on a concept of free choice. To the extent that a defendant is deprived of free choice he is exculpated in the eyes of the law." Tyrell, Insanity: A Crazy Defense, 35 MED. TRIAL TECH. Q. 48, 53 (1989).
70. See Moore, supra note 68, at 31.
This illustration describes a madman who believes that he is squeezing lemons when he chokes his wife, or believes that homicide is the command of God.\(^7\) The man is nonculpable because his mental illness caused him to be ignorant that he was squeezing his wife's neck or that the homicide was not actually the command of God. An example of the "compulsion" condition is an individual who is aware that he is injuring his victim, but is unable to desist from the act due to an uncontrollable, irresistible force within himself.\(^7\)

In their formulations of traditional criminal insanity tests, American courts have adopted both of these excusing conditions.\(^7\) An exemplar of a nonculpable ignorance test is the traditional *M'Naghten* test.\(^7\) The excuse of compulsion is typified in the irresistible impulse test.\(^7\) Another formulation, developed by the American Legal Institute in the Model Penal Code, combines the two conditions within one test.\(^7\) In the history of American criminal insanity tests, only the *Durham* and New Hampshire tests did not rely upon one or both of the ignorance or compulsion excuses. Under these tests, the very status of being mentally ill, as opposed to its "ignorance" or "compulsion" manifestations, is regarded as excusing.\(^7\)

In order to understand more fully the elements of these tests, which are the bases from which courts have derived the insanity tests used in insurance litigation, this Comment will briefly describe the tests themselves as they have been applied and the criticisms made of each one.

### 1. The M'Naghten Test

The *M'Naghten* formulation has historically been the landmark standard for the criminal insanity defense.\(^7\) It is named after Daniel

---

72. The excusing conditions of ignorance and compulsion also apply, in the guise of a mistake of fact or duress, to the noninsane criminal defendant. For example, one who believes he is using harmless food coloring when in fact it is a deadly poison is making a mistake of fact, which excuses him from criminal responsibility. An individual who acts under threats from others, or in a state of severe emotional disturbance caused by the victim's provocation, is acting under duress. This duress is also excusing. M’Naghten, who in 1843 shot and killed Edward Drummond, secretary to the Prime Minister of England. M’Naghten was acquitted in the subsequent criminal prosecution, and the case originated the now classic rule often alternatively termed the “right-wrong test.” Under this rule, the defendant would be judged criminally insane only if “at the time of the committing of the act, the party accused was labouring under such a defect of reason, from disease of the mind, as not to know the nature and quality of the act he was doing; or, if he did know it, that he did not know he was doing what was wrong.”

At the time the M’Naghten rule was formulated, many judges and lawyers believed that the presence of delusions was the only valid indication of mental illness. M’Naghten combines this conception of mental illness as delusion with the traditional legal excuse of ignorance. Three conditions are necessary for a finding of insanity under the test: first, a mental disease or defect must be present; second, as a result of this disease or defect, the defendant must suffer from a defect of reason; and third, this defect of reason must manifest itself in a delusional ignorance so that the defendant does not know what he is doing. This delusional state requirement is satisfied in two ways under the test: ignorance of the nature and quality of the act, or ignorance that the act was wrong. The test is disjunctive, for either type of ignorance will exculpate the defendant. However, the “nature and quality” type of ignorance has often been construed narrowly so that only those defendants who are not aware of the physical characteristics of the act and do not recognize that the act is harmful are definitionally insane. Cases in which the defendant suffers from this type of impairment are rare, so it is most likely that a criminal conduct if “the defendant, as a result of a severe mental disease or defect, was unable to appreciate the nature and quality or the wrongfulness of his acts.” 18 U.S.C. § 17(a) (1988).

80. Id. at 718. A remarkable public uproar resulted from M’Naghten’s acquittal, a familiar phenomenon even in recent years. For a recounting of the controversy surrounding the M’Naghten decision at the time, see D. Robinson, Psychology and Law 45-48 (1980).
81. See, e.g., State v. Carlson, 5 Wis. 2d 595, 607, 93 N.W.2d 354, 360 (1958) (referring to the test as both the M’Naghten rule and the right-wrong test).
83. See M. Moore, supra note 77, at 221.
84. See id.
85. See H. Fingarette, supra note 69, at 14.
86. See id. at 142.
87. See Note, supra note 78, at 136. One commentator has noted that the “nature and quality” wing of the tests usually has been omitted entirely from the test in United States courts. H. Fingarette, supra note 69, at 142.
88. See H. Fingarette & A. Hasse, Mental Disabilities and Criminal Responsibility 29 (1979) (“It is usual in insanity trials, for example in the case of homicide, that the defendant cognitively recognizes that he has a gun, that it can kill a person, and that he has no legal justification for doing so, yet shoots the victim.”). Professor Moore points out that M’Naghten himself knew that he was shooting a gun in order to kill a human being. Furthermore, M’Naghten
nal defendant, if adjudged insane, will be found so under the "ignorance that the act is wrong" wing of the test.\textsuperscript{89}

The \textit{M'Naghten} rule has armed judges, lawyers, legal commentators, and laypeople with substantial ammunition to criticize it.\textsuperscript{90} Much of this criticism revolves around the test's focus on the defendant's cognitive awareness, that is, his knowledge of the nature or moral status of his acts.\textsuperscript{91} Critics have argued that by limiting legal insanity to this knowledge element, the test ignores other important indicia of mental incapacity such as the "volitional" aspect of personality, which refers broadly to motive, desire, intention, will, and purpose, and the "affective" aspect, which refers to feelings, emotions, and moods.\textsuperscript{92} A volitional defect is one which prevents an individual from resisting impulses he knows are wrong. An affective defect is one which prevents an individual from feeling those emotions, such as remorse, which would ordinarily prevent him from acting in harmful ways. Because the \textit{M'Naghten} test pays no heed to these factors, the test is arguably underinclusive; its effectiveness is limited to a narrow pool of insane people,\textsuperscript{93} and it does not exculpate those people who would appear to a rational person as mentally ill.\textsuperscript{94}

Perhaps as a result of these criticisms, the \textit{M'Naghten} test has in the past been augmented with a volitional element which served as an alternative to the ignorance elements.\textsuperscript{95} This modified \textit{M'Naghten} test is conceptually very similar to the next two tests discussed below, the "irresistible impulse" and American Legal Institute ("A.L.I.") tests.

2. The Irresistible Impulse and A.L.I. Tests

The irresistible impulse test was formulated in response to the \textit{M'Naghten} test's failure to provide for volitional impairments in its definition of exculpatory mental illness.\textsuperscript{96} One commentator points out that although no particular case gives a classic definition of legal insanity as

\begin{itemize}
  \item was aware that homicide was both legally and morally prohibited. Believing he was being persecuted by the Prime Minister, \textit{M'Naghten} killed him in order to save himself from harm. Oddly enough, \textit{M'Naghten} should have failed the insanity test that was named after him. See M. \textit{Moore}, \textit{supra} note 77, at 223.
  \item \textsuperscript{89} Note, \textit{supra} note 78, at 136.
  \item \textsuperscript{90} See A. \textit{Goldstein}, \textit{The Insanity Defense} 46 (1967) (noting that critics describe the test as "a restrictive rule which reflects an outmoded faculty psychology").
  \item \textsuperscript{91} \textit{Id. See also Note, supra} note 78, at 138 ("Critics of \textit{M'Naghten} have argued that the use of 'know' limits the defense to a superficial and narrowly cognitive sort of intellectual awareness.").
  \item \textsuperscript{92} See, e.g., H. \textit{Fingarette}, \textit{supra} note 69, at 144; Note, \textit{supra} note 78, at 136, 138.
  \item M. \textit{Moore}, \textit{supra} note 77, at 219.
  \item \textsuperscript{93} \textit{Id. See H. Fingarette, supra} note 69, at 149.
  \item \textsuperscript{94} \textit{See id. at 12. No such augmentation has been taken with respect to an "affective" defect, however. One commentator suggests that this may be due to the dissimilarity between a lack of the usual affective response and the traditional excuses of ignorance (and, presumably, compulsion). Note, \textit{supra} note 78, at 139 n.34.
  \item \textsuperscript{95} A. \textit{Goldstein, supra} note 90, at 68; M. \textit{Moore, supra} note 77, at 219.
\end{itemize}
"irresistible impulse,"^{97} the case of *Parsons v. State*^{98} provides a representative formulation:

> Did he know right from wrong, as applied to the particular act in question? . . . If he did have such knowledge, he may nevertheless not be legally responsible if the two following conditions concur: (1) If, by reason of the duress of such mental disease, he had so far lost the *power to choose* between the right and wrong, and to avoid doing the act in question, as that his free agency was at the time destroyed; (2) and if, at the same time, the alleged crime was so connected with such mental disease, in the relation of cause and effect, as to have been the product of it *solely*.

Thus, the irresistible impulse test shares with *M'Naghten* the requirement that a mental disease be present, yet significantly expands the test’s exculpatory range. The test encompasses an insane person who knows the difference between right and wrong (and presumably was able to identify his act as morally and/or legally wrong at the time of its commission), yet who, as a result of his disease, had lost the ability to control his actions.^{100} Although no state currently follows this insanity test,^{101} the concept of an impairment of volitional capacity was incorporated into the widely used A.L.I. insanity test.

The A.L.I. test was developed in the 1950s as part of the Model Penal Code (“M.P.C.”).^{102} Section 4.01 of the M.P.C. proposes that “[a] person is not responsible for criminal conduct if at the time of such conduct as a result of mental disease or defect he lacks substantial capacity either to appreciate the criminality [wrongfulness] of his conduct or to conform his conduct to the requirements of law.”^{103} In essence, this test combines the *M'Naghten* and irresistible impulse tests and makes some minor changes in wording.^{104} In the comment to section 4.01, the Reporter of the Model Penal Code notes that the test includes the volitional prong because “cognitive factors are not the only ones that preclude inhibition; that even though cognition still obtains, mental disorder may produce a total incapacity for self-control.”^{105} Thus, the basic idea behind the inclusion of the volitional prong in the A.L.I. test is the same as that of the irresistible impulse test. The A.L.I. test differs from the irresistible impulse test, however, in that it avoids the implication that it

104. *M. Moore, supra* note 77, at 222.
is restricted to sudden, spontaneous acts; insane compulsion that is accompanied by brooding or reflection is also exculpating under the A.L.I. test.\textsuperscript{106}

Other changes are worth noting in the A.L.I. test. In contrast to the complete impairment of cognitive capacity demanded by the \textit{M'Naghten} test, or the complete incapacity for self-control required by the irresistible impulse test, the A.L.I. formulation encompasses a lack of "substantial" capacity.\textsuperscript{107} This change was implemented in recognition that most mentally ill people are not completely disoriented, or completely incapable of self-control,\textsuperscript{108} thus providing testifying psychiatrists with a more realistic standard with which to work.\textsuperscript{109} The standard also uses the term "appreciate," instead of the \textit{M'Naghten} term "know."\textsuperscript{110} The comment to section 4.01 does not discuss the reason or the significance of the change in language, but some commentators have suggested that "appreciate" could be intended to broaden the scope of the criterion in order to include affective aspects of personality.\textsuperscript{111} However, proponents of the change from "know" to "appreciate" have not indicated the specific difference in meaning between the terms.\textsuperscript{112} One commentator suggests that upon deeper analysis, the terms are virtually interchangeable.\textsuperscript{113}

The primary criticism of tests including the volitional prong is that this prong cannot effectively distinguish an irresistible impulse from an impulse not resisted.\textsuperscript{114} The comment to section 4.01 of the Model Penal Code recognizes that the prong inevitably calls for a distinction between

\textsuperscript{106} See id.
\textsuperscript{107} See id. § 4.01 comment 4.
\textsuperscript{108} As pointed out in the comment to § 4.01:
The schizophrenic, for example, is disoriented from reality; the disorientation is extreme; but it is rarely total. Most psychotics will respond to a command of someone in authority within the mental hospital; they thus have some capacity to conform to a norm. But this is very different from the question whether they have the capacity to conform to requirements that are not immediately symbolized by an attendant or policeman at the elbow.

\textsuperscript{112} See H. Fingarette, supra note 69, at 152 & n.33 ("So far as I can see, those who propose replacing 'know' with 'appreciate' or comparable language fail to give any specific and acceptable meaning to the new terms.") (footnote omitted).
\textsuperscript{113} See M. Moore, supra note 77, at 222.
\textsuperscript{114} See A. Goldstein, supra note 90, at 77 ("[T]he 'control' tests . . . [are seen as] broaden[ing] the defense far too much, making it available to psychopaths, to neurotics, perhaps to all who commit crime. This is said to follow from the impossibility of determining which acts were uncontrollable, rather than merely uncontrolled, and the attendant suspicion that the former category does not really exist; from the fact that weaknesses in self-control are to be found in most men; and from the consequent ease of asserting an inability to control one's conduct.") (footnote omitted); see also S. Glueck, Law and Psychiatry: Cold War or Entente Cordiale 50 (1962) ("It is claimed to be extremely difficult to prove the actual irresistibleness of a particular impulse.") (footnote omitted); Note, supra note 78, at 140 ("[The ABA and APA] opted for
incapacity and mere indisposition. But, the problem is not addressed further than a remark that the Institute "believe[s] that the distinction can be made." Other criticisms of the volitional prong have included concerns about public safety if the prong is included in insanity tests\textsuperscript{116} and confusion in the actual application of the test.\textsuperscript{117}

3. The New Hampshire and Durham Tests

The New Hampshire and Durham tests present a dramatic break from the traditional legal approaches to insanity described above. Instead of attempting to recombine the traditional excuses of ignorance and compulsion into a new, "better" formulation, these tests ignore volitional and cognitive criteria and simply maintain that an accused is not criminally responsible if his unlawful act is a product of a mental disease or defect.\textsuperscript{118} Although both tests were subsequently overruled by the courts that developed them, the tests have had an important impact on the debate over the appropriate standards for determining mental incapacity.\textsuperscript{119}

The history of these two tests is too lengthy to recount here,\textsuperscript{120} but both tests are based upon the belief that mental illness is in essence a physical disease.\textsuperscript{121} Both share the assumption that if a criminal act is the result of such an abnormal medical condition, the defendant is ipso facto not responsible for his behavior, regardless of what actual behavioral form his disease may take. The acceptance of the view that mental illness is a scientific concept led to the natural conclusion that the medical professionals involved—that is, psychiatrists—were uniquely qualified to testify to the court on whether or not a defendant had such a condition, and thus whether or not he should be adjudged responsible.\textsuperscript{122}

In fact, Durham was explicitly decided to provide psychiatrists a wide

\end{itemize}
purview of testimony to provide to the court;\textsuperscript{123} earlier tests such as \textit{M'Naghten} were seen as insufficient because they prevented psychiatric witnesses from introducing evidence of disabling symptoms outside the peculiar criteria of the tests.\textsuperscript{124}

Criticism of the \textit{Durham} and New Hampshire tests, also called the product tests, focused on their failure to provide a clear standard by which a jury could judge the evidence presented—the same reasons that had initially recommended the test.\textsuperscript{125} Unlike the \textit{M'Naghten}, irresistible impulse, and A.L.I. tests, the product tests gave no pathological criteria for the jury to judge the defendant's mental condition. Instead, the jury was left to rely almost exclusively on the expert witnesses' labeling of the act as a "product" of "mental disease."\textsuperscript{126} One commentator notes that as the \textit{Durham} test was applied in various cases, "it became clear to the court that psychiatric conclusions about 'product' were often disguised moral judgments about the culpability of the accused,"\textsuperscript{127} and that this factor led the District of Columbia eventually to reject the \textit{Durham} rule entirely,\textsuperscript{128} as the New Hampshire court had done nearly a century earlier.\textsuperscript{129}

\section*{C. Determining Mental Incapacity for Intentional Act Exclusion Clauses: The Current State of the Law}

In this Section, the Comment will show that courts dealing with insane insureds generally utilize mental and behavioral criteria from the criminal insanity tests in order to determine if an intentional act exclusionary clause serves to deny coverage for an insured's wrongful acts.

In recent years, American courts have been divided into two distinct camps on the issue of insane insureds and the applicability of intentional act exclusionary clauses. Basically, the first view holds that if an injury

\begin{itemize}
  \item\textsuperscript{123} See id. at 228.
  \item\textsuperscript{124} See A. Goldstein, \textit{supra} note 90, at 82-83 (noting that the \textit{Durham} court felt that "symptom tests . . . tend to freeze the law in conventional patterns and make it difficult for psychiatric witnesses to introduce new clusters of symptoms that might be equally disabling").
  \item\textsuperscript{125} \textit{Id.} at 84.
  \item\textsuperscript{126} \textit{Id.}
  \item\textsuperscript{127} M. Moore, \textit{supra} note 77, at 231. Elsewhere, Moore relates a remarkable example of the power psychiatrists had under the tests, in the story of psychiatrists at St. Elizabeth's Hospital. See Moore, \textit{supra} note 68, at 37-38. These psychiatrists, who were often called to testify in District of Columbia criminal trials, had made a policy decision that psychopathic and sociopathic disturbances would not be included as mental illnesses within the \textit{Durham} rule. A weekend meeting at the hospital changed that policy, and the disturbances were declared to be mental illnesses for legal purposes. One of the consequences of the policy change was that the District of Columbia Court of Appeals awarded a new trial to a sociopathic defendant because the weekend change of nomenclature denied him new medical evidence vital to his defense. \textit{Id.}
  \item\textsuperscript{128} See United States v. Brawner, 471 F.2d 969 (D.C. Cir. 1972); M. Moore, \textit{supra} note 77, at 230.

\end{itemize}
results from an insane act, the intentional injury clause is inoperative and
the insurer is liable. The opposing view holds a narrower view of
insanity, finding that an injury inflicted by an insane person may be
termed intentional where the actor understands the physical nature and
consequences of the act, even though he is incapable of distinguishing
right from wrong—a position even more restrictive than the M’Naghten
test. Although the courts have been divided along these lines, some
jurisdictions have shown little reluctance to alter and fine-tune the tests.
The willingness to change the language used within the tests has intro-
duced some confusion into this area of the law.

I. Ruvolo and its Progeny: A Broad Definition of Insanity

In 1963, the New Jersey Supreme Court handed down a decision
which quickly became the leading case concerning the effect of insanity
on the operation of intentional act exclusionary clauses in insurance poli-
cies. Ruvolo v. American Casualty Co. concerned a physician,
Anthony Ruvolo, who shot and killed another physician with whom he
had practiced medicine. At the time of the killing, Ruvolo had a per-
sonal liability insurance policy in effect, which was issued by the defend-
ant insurer. This policy provided that the company would pay all sums
that Ruvolo “shall become legally obligated to pay as damages” because
of the death of any person resulting from [his] ‘activities.’ The cover-
erage was limited by an exclusionary clause providing that the policy did
not apply to death “caused intentionally by or at the direction of the
insured.”

The victim’s widow filed a wrongful death suit, which Ruvolo’s
insurer refused to defend on the ground that the death had been caused
by Ruvolo’s intentional act. The guardian of the insured then filed a
declaratory judgment action against his insurer, seeking to establish that
the policy afforded coverage. The insurer’s defense was that the inten-
tional act exclusion clause applied. The trial court, relying upon psychia-
trists’ affidavits that Ruvolo was insane at the time of the killing and
lacked the capacity to form a rational intent to kill, granted summary
judgment for the plaintiff. The trial court held that an act performed
under such circumstances could not be considered an intentional act, and

133. Id. at 493, 189 A.2d at 206.
134. Id., 189 A.2d at 206.
135. Id. at 494, 189 A.2d at 206.
136. Id. at 495, 189 A.2d at 207.
as a result, the intentional act exclusion clause did not apply.\textsuperscript{137} The insurer appealed.

On appeal, the New Jersey Supreme Court first examined the issue of insanity and the operation of the exclusionary clause in the policy. Although noting that public policy prevents the indemnification of an insured from the consequences of his willful criminal act, and that exclusionary clauses achieve this aim, the court also pointed out that in applying such provisions “it has come to be commonly accepted that where the death or loss involved . . . is the product of an insane act, recovery is not barred [under the policy].”\textsuperscript{138} The court accepted the proposition that insanity would not trigger the exclusionary clause. It perceived that the case required it to formulate a test to determine whether the insured had the mental capacity to perform an act intentionally.\textsuperscript{139}

The court concluded that if an insured would have been excused from responsibility under New Jersey’s criminal standard, which was at that time the \textit{M’Naghten} test,\textsuperscript{140} then the act was not intentional for the purposes of the insurance policy.\textsuperscript{141} But the court did not stop there. Noting that exclusionary clauses are drawn by experts working for the insurer, the court held that such clauses would be strictly construed against the insurer and that the insured was entitled to the most protection that any reasonable interpretation of the clauses would permit.\textsuperscript{142} The court stressed that where the conduct insured against involves possible injury or damage to the public, this doctrine deserved especial emphasis.\textsuperscript{143} Thus, the court reasoned, coverage should not be limited to insureds who satisfy the \textit{M’Naghten} definition. Instead, the court proposed an alternative test for cases in which the insured’s mental capacity was in question:

\begin{quote}
[If] the insured was suffering from a derangement of his intellect which deprived him of the capacity to govern his conduct in accordance with reason, and while in that condition acting on an irrational impulse he shot and killed [the victim], his acts cannot be treated as “intentional” within the connotation of defendant’s insurance contract.\textsuperscript{144}
\end{quote}

The court went on to examine the trial court’s grant of summary judgment to the plaintiff, determining that the lack of important factual details about Ruvolo’s mental condition made granting summary judg-

\end{itemize}
ment inappropriate.\textsuperscript{145} 

The \textit{Ruvolo} court's formulation of the test is an attempt to preserve insurance coverage for a group of insureds who would not meet the \textit{M'Naghten} definition of insanity. Whereas the \textit{M'Naghten} test covers only those individuals who suffer from a cognitive incapacity—that is, those who are unable to understand the nature and consequences of their act or its moral wrongfulness\textsuperscript{146}—the \textit{Ruvolo} test provides a specific criterion for those insureds who are \textit{volitionally} incapacitated and cannot control their actions.

The specific criterion for a finding of volitional incapacity emerges from the language of the test itself. For example, the phrase "capacity to govern his conduct" in the \textit{Ruvolo} test appears to be equivalent to the phrase "capacity to conform conduct" used in the A.L.I. criminal standard. Although the phrasing of the A.L.I. test focuses on the capacity of the actor "to conform his conduct to the requirements of law,"\textsuperscript{147} while the \textit{Ruvolo} test uses the phrase "in accordance with reason,"\textsuperscript{148} the emphasis on the volitional capacity of the actor remains the same in both. In addition, the \textit{Ruvolo} test requires that the insured have acted upon an "irrational impulse" while in a volitionally incapacitated condition, which seems to be a concept drawn from the irresistible impulse test.\textsuperscript{149}

Yet a problematic ambiguity lies within the \textit{Ruvolo} formulation. One commentator has suggested that the volitional and cognitive elements are superimposed within the phrase "deprived . . . of the capacity to govern his conduct in accordance with reason," with the "capacity to govern" fragment indicating volitional capacity, and the "in accordance with reason" fragment indicating cognitive capacity.\textsuperscript{150} Perceived this way, the test eliminates the \textit{M'Naghten} standard from insurance litigation, since an individual who has the capacity to govern his conduct in accordance with reason but does not do so because of a cognitive defect would not be found insane under the test. However, given the extensive discussion of the specifics of the \textit{M'Naghten} test within the opinion and the court's statement that those insureds who met this definition would retain insurance coverage, it is not immediately clear why the court would replace the \textit{M'Naghten} standard with a test appearing entirely volitional in emphasis. One possibility is that no such replacement was intended, but rather the volitional test was meant to be applied \textit{in con-}

\textsuperscript{145} Id. at 500, 189 A.2d at 210.

junction with the M'Naghten standard in order to provide coverage to insureds who qualify under the specific terms of either or both tests. If intended to supersede the M'Naghten test completely, the Ruvolo test is poorly drafted in that the cognitive function is at most barely suggested by the phrase "in accordance with reason."

Despite this confusion, the Ruvolo test has been employed in other cases. In George v. Stone, a Florida appellate court adopted the exact terminology of the New Jersey opinion and applied the test to a situation in which an insured shot and severely injured his mother-in-law's physician. The court overturned the trial court's summary judgment in favor of the insurer, who had claimed that the insured's coverage was barred by an exclusionary clause excluding injury "caused feloniously or intentionally by or at the direction of an Insured," and remanded the case for trial on the merits.

Similarly, in Globe American Casualty Co. v. Lyons, the court found the Ruvolo reasoning persuasive as applied to an insured who had deliberately driven her car into an oncoming truck in an attempt to commit suicide. Quoting the doctrine of strict construction of exclusionary clauses against the insurer, and adding that the deterrent function of such clauses is poorly served by applying them to mentally incapacitated individuals, the court applied the Ruvolo test as follows: "If [the insured] was suffering from mental derangement which deprived her of her capacity to act in accordance with reason and while in that condition acted on an irrational compulsion to drive her vehicle into oncoming traffic, her act was not 'intentional.'" The Arizona court made minor changes in wording from the Ruvolo formulation. The Globe court replaced Ruvolo's requirement of finding a "derangement of [the] intellect," with the requirement that there be "mental derangement." The Globe test used "act in accordance with reason" to replace Ruvolo's "govern . . . conduct in accordance with reason," and used "irrational compulsion" to replace Ruvolo's "irrational impulse." While the court did not explain these changes, they do little or nothing to alter the meaning of the test.

Other courts have been influenced by the Ruvolo decision, but have

152. See id. at 262.
153. The insured also killed his bedridden mother-in-law and committed suicide. The wounded doctor brought the lawsuit. See id. at 260.
154. Id. at 262.
155. Id. at 261.
157. Id. at 339, 641 P.2d at 253.

159. Id. at 340, 641 P.2d at 254.
not followed the language of the test as closely as George or Globe did. In *Rosa v. Liberty Mutual Insurance Co.*,\(^{160}\) decided by a federal court apparently applying Connecticut law, psychiatric testimony established that the insured had long suffered from severe schizophrenia.\(^{161}\) The insured shot his victim twice during a rape attempt and had shown significant planning activity before the crime,\(^{162}\) yet the court found that these purposeful actions were “traceable exclusively to the impairment of his judgment and rational capacity by the influence of schizophrenia.”\(^{163}\) Further, the “derangement of his intellect deprived him of the ability to govern his conduct in accordance with reason and intent, to judge the nature, character and consequence of his act and to resist the impulses to do other than what he did.”\(^{164}\) As a result, the insured’s actions were not intentional within the meaning of the insurance policy’s exclusionary clause, which provided that coverage was not available for injuries “‘caused intentionally by . . . the Insured.’”\(^{165}\)

Although the *Rosa* opinion cites the *Ruvolo* decision,\(^{166}\) its formulation of an insanity test does not follow the *Ruvolo* test strictly, but rather contains a grab bag of elements from nearly all criminal standards. The *Rosa* test partially follows the *Ruvolo* language in its finding that the insured suffered a “derangement of his intellect [which] deprived him of the ability to govern his conduct in accordance with reason . . . .”\(^{167}\) However, the *Rosa* test expands upon *Ruvolo’s* language, which seems to apply only to individuals with volitional incapacities, by adding the specific language of the cognitive and volitional criteria drawn from traditional criminal standards: the insured was unable to judge the nature, character, and consequences of his act, was unable to govern his conduct in accordance with reason, and was unable to resist the impulse to commit the act.\(^{168}\) Additionally, the opinion suggests the influence of the *Durham* and New Hampshire product tests in finding that the crime was traceable exclusively to the insured’s schizophrenia.\(^{169}\)

In *Congregation of Rodef Sholom v. American Motorists Insurance*
Co., a California court took a similar approach: the opinion discusses Ruvolo and approves of the policy considerations behind the test, but departs from the Ruvolo standard significantly in formulating its own test. The insured in Rodef Sholom was a sixteen-year-old boy who set a fire in a wastebasket in a classroom. The fire spread and caused substantial damage to the building. The boy had been under the care of a psychiatrist, who testified in court that the boy was suffering from a “schizoid personality caused by mental disease” at the time of his act and that an irresistible impulse forced him to set the fire. The trial court held that the intentional act exclusion in the insured’s policy applied unless the insured’s conduct demonstrated legal insanity under the M’Naghten test, then the criminal standard in California. Under that standard, the jury found the boy to be sane.

The appeals court disagreed with the trial court's use of the M’Naghten test. Discussing Ruvolo, the court highlighted the policy considerations underlying the decision: exclusions should be strictly construed against the insurer, and this doctrine applies with special emphasis when the insured-against conduct involves injury to the public. Although noting that the exclusion of intentional acts from coverage stems from a belief that an individual should be financially responsible for the consequences of his intentional acts, the court stated that an individual who lacks substantial capacity to conform his conduct to the law will not be influenced by the existence of insurance. Furthermore, the public’s strong interest in the compensation of victims reinforces the principle that exclusionary clauses be interpreted as narrowly as possible. Accordingly, the court concluded that the “concept of insanity” relevant to insurance exclusions should be broader than that provided by the M’Naghten test.

The court then noted that although the A.L.I. test of criminal insanity “more nearly comports to the proper rule than does M’Naghten,” neither standard was appropriate in the insurance context. Instead, the court applied the following rule:

If [the insured] was suffering from a mental disease or defect which deprived him of capacity to intend to set the fire and cause the damage complained of, or which deprived him of the capacity to govern his con-

duct in accordance with reason, then he did not act intentionally as that word is used in the exclusionary clause in [the insurer's] policy of insurance.\textsuperscript{180}

*Rodef Sholom* departs from *Ruvolo* in several ways. First, it returns to the traditional criminal test requirement of a “mental disease or defect,” as opposed to *Ruvolo*’s broader “derangement of the intellect” requirement. The *Rodef Sholom* test is very clear in its separation of the cognitive and volitional criteria. The cognitive criterion is embodied in the “capacity to intend” phrase, and the volitional criterion is embodied in the “capacity to govern conduct” phrase. In this respect, the *Rodef Sholom* test is clearer than the *Ruvolo* test because it uses specific language to encompass both cognitively and volitionally incapacitated insureds.

Another group of tests shows the influence of the *Ruvolo* decision but does not use its specific language or that of any of the other related tests. Rather, these tests simply state that exclusionary clauses do not apply where an insured is insane or lacks the mental capacity to form an intent. For example, in *Nationwide Mutual Fire Insurance Co. v. Turner*,\textsuperscript{181} the court held that “an insane individual cannot commit an intentional act within the meaning of an intentional injury exclusion clause.”\textsuperscript{182} No further criteria were presented by the court; “insanity” remains essentially undefined, without the specific cognitive and volitional elements employed by other tests.\textsuperscript{183}

2. *Wagner and Its Progeny: Insanity Defined in Terms of Cognitive Awareness*

The line of authority in opposition to *Ruvolo* defines insanity in much narrower terms. The leading case is *Colonial Life & Accident Insurance Co. v. Wagner*,\textsuperscript{184} decided in Kentucky a year after *Ruvolo*. In

\item \textsuperscript{184} 380 S.W.2d 224 (Ky. 1964).
\end{itemize}
Wagner, the insured was an employee of a hotel that had a group insurance policy. That policy excluded coverage for "death or other loss caused or contributed to . . . by injuries intentionally inflicted upon the Insured Employee by any other person." The insured, Warren Wagner, was shot and killed by a man who claimed that his mental condition was such that he could not intentionally commit the offense. Testimony was presented that the killer "got spells where he did not know what he was doing," and a psychology professor who had interviewed the killer maintained that the man was incapable of forming a rational intention to perform the act. The court noted, however, that when the killer himself was asked whether the killing was intentional, he repeatedly replied that it was. In addition, there was evidence that the killer had threatened the life of the victim prior to the attack.

The trial jury was instructed that the exclusion clause did not apply if they believed that the killer did not have sufficient mind or intellect to know the difference between right and wrong, or to form a rational intent to shoot the insured. They were instructed that the clause did apply if they found that the gunshot wounds were intentionally inflicted. The jury returned a verdict for the victim's widow. The court of appeals remanded for a new trial, holding that if the evidence presented was substantially the same, the trial court should direct a verdict for the insurer. In support of its conclusion, the court distinguished between the nonapplication of criminal sanctions to an insane person and the finding that there was no intention behind the act:

In law, there are many conditions under which a person may intentionally kill and not be subject to criminal punishment. A man may kill in self-defense. . . . The executioner may kill with the sanction of the State. All of this destruction is intentional, but excusable. Similarly a person may be excused from penalty if he is insane at the time he commits a criminal act. He may do the act with every intention of consummating it, but if it is shown that he was mentally insufficient, he is excused from the imposition of the usual sanctions. The absence of punishment, however, does not retrospectively expunge the original intention.

The court went on to discuss another case, Deloache v. Carolina Life
Insurance Co.,\textsuperscript{194} which had held that whether an insured was mentally or legally responsible for his act was irrelevant for the purposes of insurance coverage.\textsuperscript{195} The Wagner court accepted the Deloache reasoning and held that under the terms of the policy at issue, the act was intentional and therefore specifically excluded from the policy coverage.\textsuperscript{196} In a second appeal, the court stated its conclusion in even stronger terms: "Irrespective of whether [the killer] was insane, the gunshot wounds which caused the death of the assured were 'intentionally inflicted' as this term is used in the policy."\textsuperscript{197}

In effect, Wagner maintained that an insane person, though possibly so incapacitated that he could not judge right from wrong, was nevertheless capable of forming an intention to perform an act. It further suggested that if an insane person was at least rational enough to understand the nature of the act he was performing, then he was acting "intentionally" for the purposes of insurance coverage, even though his mental condition may not have allowed any other sort of intellectual functioning. Compared to the existing criminal tests of insanity, this test went beyond even the narrow cognitive view of the M'Naghten standard; it split off the "understanding the nature and consequences" criterion from the "right and wrong" criterion, and discarded the latter.

The Wagner position was not an original one in the insurance context; it had been implied in earlier cases such as Rider v. Preferred Accident Insurance Co.\textsuperscript{198} and Pruitt v. Life Insurance Co. of Virginia.\textsuperscript{199} In Rider, an insured was shot and killed by a man allegedly incapable of distinguishing right from wrong. The appellate division overturned a verdict in favor of the insured victim's widow and directed a verdict in favor of the insurer, stating, "The undisputed evidence of the experts . . . is to the effect that [the killer], though insane, intended to shoot, and injure or kill, the insured; that he understood the physical consequences and results of such shooting."\textsuperscript{200} The Pruitt court similarly held that the evidence presented was "wholly insufficient to show that [the killer] . . . was so insane as not to know right from wrong. But it is idle to pursue that line of thought, because it remains proved that [the killer] intentionally stabbed [the insured] . . . ."\textsuperscript{201} The effect of these decisions is to

narrow the definition of insanity for the purposes of intentional act exclusionary clauses to a single element: incapacity to understand the physical nature and consequences of an act. This definition of insanity is much narrower than definitions in the Ruvolo line which cover both cognitive and volitional incapacities.

Wagner, Deloache, and Pruitt all concerned an insured who was the victim, not the perpetrator, of an insane act. Nonetheless, the reasoning of these cases has been applied to situations in which the insured claims insanity to avoid the operation of an exclusionary clause. In Rajspic v. Nationwide Mutual Insurance Co. (Rajspic I),202 the insured shot and injured the victim during an altercation. At her criminal trial, the insured was acquitted of assault with a deadly weapon on the grounds of insanity, and in a later civil suit brought by the victim, it was stipulated that the insured was legally insane at the time of the shooting.203 A verdict was entered for the victim, but the insurer refused to pay the judgment, claiming the act fell within the intentional act exclusionary clause in the insured's policy.204 The insured brought suit against the insurer for payment, and at trial the court refused the insurer's motion to exclude evidence of the stipulation.205 Instead, the trial court applied collateral estoppel based on the stipulation to the insured's insanity, and granted summary judgment for the insured on liability.206 The insurer appealed the summary judgment.207

In its analysis, the Supreme Court of Idaho first considered whether a person characterized as insane was capable of forming the intent necessary to commit an intentional tort, or whose actions, in the terms of this case, "could be considered within the intentional acts exclusion of the insurance policy at issue."208 The court concluded that insane persons could commit intentional acts,209 agreeing with the following statement from a Massachusetts insurance case that denied insurance coverage:

A person may be insane, entirely incapable of distinguishing between right and wrong, and without any just sense of moral responsibility, and yet retain sufficient powers of mind and reason to act with premeditation, to understand and contemplate the nature and consequences of his own conduct, and to intend the result which his acts are calculated to produce.210

210. Id. at 664, 662 P.2d at 536 (quoting Dean v. American Mut. Life Ins. Co., 86 Mass. (4 Allen) 96, 100 (1862)).
Thus, as the court stated, insanity under the law is not dispositive of whether the insured committed an intentional act within the scope of the policy exclusion.\textsuperscript{211} Therefore, the insanity of the insured for the purposes of the policy presented a question of fact. The court also overturned the trial court's application of collateral estoppel to the issue of the insured's insanity, holding that counsel's stipulation of insanity at the civil trial denied the insurer a full, fair opportunity to litigate the issue.\textsuperscript{212} The court remanded the case to the trial court for litigation of the issue of insanity.\textsuperscript{213}

The case was appealed again in \textit{Rajspic II},\textsuperscript{214} whereupon the court repeated its earlier conclusion that "an otherwise insane person may have sufficient capacity to understand and contemplate the nature and consequences of her actions."\textsuperscript{215} The court noted that other cases, such as \textit{Ruvo},\textsuperscript{216} \textit{Globe},\textsuperscript{217} and \textit{Rosa},\textsuperscript{218} had held that as a matter of law an insane person cannot intentionally cause injury as excluded in insurance policies.\textsuperscript{219} The court did not adopt this position,\textsuperscript{220} but did state that in order for the exclusion clause to apply, the insurer would have to prove that the insured was capable of forming the intent to injure the victim.\textsuperscript{221} The \textit{Rajspic II} court did nothing, though, to alter its previous position that an insane person can act intentionally if she understands the nature and consequences of her acts. In this respect, the \textit{Rajspic} opinions follow the \textit{Wagner} reasoning and suggest that a minimal level of cognitive awareness is sufficient to establish an intention for the purposes of insurance exclusions.

This "minimal level of awareness" concept was explored in more depth in a recent Virginia case, \textit{Johnson v. Insurance Co. of North America}.\textsuperscript{222} The insured in \textit{Johnson} shot his victim after planning the act, awaiting the victim's arrival home, and later conversing with him.\textsuperscript{223} During the trial, which was initiated by the insurer on a bill of complaint for declaratory judgment,\textsuperscript{224} three mental health professionals testified that the insured said he believed the victim was projecting voices into his

mind, preventing him from hearing the voice of God. They also testified that the insured told them that on the day of the shooting, God had commanded him to kill the victim and he had obeyed God's order. The trial court concluded that the exclusionary clause in the insured's policy applied, noting that "even though [the insured] was mentally ill, he was aware of his actions and of the consequences of those actions. . . . [The insured] may have been prompted by or acting under delusional beliefs, but he was aware of what he was doing and intended the resulting injury." 

The Supreme Court of Virginia affirmed the trial court judgment, agreeing that the insured's actions, though driven by delusion, were intentional. To support this seemingly internally inconsistent notion, the court noted that the two elements of the M'Naghten rule, which it termed the "nature-of-the-act test" and the "right-wrong" test, can logically be separated. The court found that when the insured shot the victim, he knew he was shooting at a human being, and acted deliberately and methodically in doing so. As the court stated, "He acted with resolve and determination, not knowing that what he was doing was wrong because God had ordered him to act." The court held that the minimal degree of awareness the insured possessed was sufficient to establish that the shooting was intentional, and therefore the insurance exclusion regarding intentional acts applied.

The court denied any weakness of its holding, insofar as an insured might be deemed insane under criminal law, yet be denied insurance coverage because he was found capable of forming an intent under insurance law. Quoting Wagner, the court stated that the refusal to apply criminal sanctions to an insane person "does not retrospectively expunge the original intention." 

Johnson provides the most detailed exposition of the position adopted by the Wagner line of cases. Regardless of the total nature of an insured's insanity, those courts only applied a test analogous to the first element of the M'Naghten rule—whether the insured was capable of understanding the nature and consequences of his acts. That capability of the insured determines whether his act was intentional for the pur-

poses of exclusionary clauses. Courts ignore other factors, such as the capacity to distinguish right from wrong, or the ability to desist from performing the wrongful act—favoring instead a narrowly defined level of cognitive awareness.

III
THE ARGUMENT AGAINST THE EXISTING TESTS

In Part I, this Comment discussed exclusionary clauses, the public policies and doctrines behind insurance law, and the determination of intent where insanity is not at issue. Part II described the different approaches taken toward insanity in the tort and criminal contexts, and listed the various tests implemented in criminal courts to determine whether the defendant is insane. Finally, this Comment discussed the tests for insanity as they have evolved in the insurance context, demonstrating that they are rooted in the tests developed in the criminal context.

In this Part, the Comment will argue that the various tests used to determine insanity in the insurance context are flawed for a number of reasons. First, certain tests are underinclusive in that they deny coverage to large numbers of insureds who are unable to control their actions. Other tests are overinclusive in that the criteria they apply are too vague, are overly dependent upon psychiatric testimony, and could be construed to cover voluntary intoxication. This Section of the Comment will examine the existing insurance insanity tests and describe the sources of their weaknesses.

A. Problems With the “Derangement of the Intellect” Test

The primary problem with Ruvolo v. American Casualty Co.\textsuperscript{235} and the cases following its test, such as George v. Stone,\textsuperscript{236} Globe American Casualty Co. v. Lyons,\textsuperscript{237} and Rosa v. Liberty Mutual Insurance Co.,\textsuperscript{238} lies in the substitution of “derangement of the intellect” or “mental derangement” for the more traditional “mental disease or defect.” Admittedly, establishing the proper legal definition of “mental disease,” which is essentially a medical/psychiatric concept, is problematic.\textsuperscript{239} However, the crucial difference between the phrases “derangement of the intellect” and “mental disease or defect” is that under the former, an insured’s voluntary intoxication through drugs or alcohol could possibly

\begin{itemize}
\item \textsuperscript{235} 39 N.J. 490, 189 A.2d 204 (1963).
\item \textsuperscript{236} 260 So. 2d 259 (Fla. Dist. Ct. App. 1972).
\item \textsuperscript{237} 131 Ariz. 337, 641 P.2d 251 (Ct. App. 1981).
\item \textsuperscript{238} 243 F. Supp. 407 (D. Conn. 1965).
\item \textsuperscript{239} See infra text accompanying notes 273-82.
\end{itemize}
qualify, whereas under the latter it could not.\textsuperscript{240}

The \textit{Ruvolo} court did not explain why it used the phrase \textquote{derangement of the intellect,\textquoteright } nor did it suggest that the phrase might cover voluntary intoxication. Instead, the court relied on two traditional doctrines of insurance law and focused on the underlying public policy the doctrines were designed to serve. The court relied on the following: (1) exclusion clauses should be strictly construed against the insurer, and (2) an insured is entitled to as much protection as a reasonable interpretation of the clause permits.\textsuperscript{241} The court explained its reliance on these doctrines by emphasizing that their underlying purpose—protecting members of the public—was particularly forceful where, as here, the insured's mental incapacity would absolve him of criminal responsibility.\textsuperscript{242}

Some commentators argue that including voluntary intoxication

\begin{footnotesize}
\textsuperscript{240} See Note, \textit{supra} note 15, at 1052. This result might not be objectionable if one adopts the widely accepted view of alcoholism and drug addiction as diseases. See generally H. \textit{Fingarette} & A. \textit{Hasse}, \textit{supra} note 88, at 144-48, 186-90 (discussing the labeling of addiction as a disease). Under this view, the conduct of an alcoholic or drug addict is perceived as involuntary. See \textit{id.} at 152-53. Addiction, then, could be included under the traditional rubric \textquote{mental disease or defect,\textquoteright } because like schizophrenia or mental retardation, it is involuntarily caused and maintained. However, the view of narcotics addiction and especially of alcoholism as diseases has been subject to withering attack from commentators inside and outside the medical profession. See \textit{id.} at 146 n.41, 189 n.60. A recent attack was made by the Supreme Court in \textit{Traynor v. Turnage}, 485 U.S. 535 (1988), where the Court upheld a Veteran's Administration regulation that classified alcoholism as \textquote{willful misconduct.} \textit{Id.} at 550-51. Fingarette and Hasse themselves conclude that \textquote{there is no medical foundation for adopting the general proposition . . . that addictive conduct is involuntary.\textquoteright } H. \textit{Fingarette} & A. \textit{Hasse}, \textit{supra} note 88, at 191. Moreover, as they point out, \textquote{massive descriptive evidence indicates that individuals often make choices to abandon addictive conduct or abstain from drug or alcohol use permanently or temporarily.\textquoteright } \textit{Id.} This Comment does not intend to enter into complex arguments about such conditions and their medical/legal ramifications. Recognizing, however, that the root question concerning the effect of intoxication on insurance coverage is its classification as voluntary or involuntary, this Comment takes the position of Fingarette and Hasse and concludes that addictive behavior is in its essence voluntarily undertaken, since even people genetically predisposed to those diseases can choose not to drink or use drugs. Such choice-driven behavior should not be deemed equivalent to truly involuntary conditions like schizophrenia or mental retardation, which are recognized as true mental diseases. This argument, of course, does not apply to situations where an insured has become intoxicated involuntarily (as, for example, a person whose drink has been spiked) or those individuals who react to drugs ingested pursuant to medical advice.

\textsuperscript{242} \textit{Id.}, 189 A.2d at 208; \textit{see also} Globe Am. Casualty Co. v. Lyons, 131 Ariz. 337, 339-40, 641 P.2d 251, 253-54 (Ct. App. 1981) (\textquote{To deny coverage for acts caused by an individual lacking the mental capacity to act rationally is inconsistent with a primary purpose for incorporating intentional injury exclusions into insurance policies . . . . An individual who lacks the capacity to conform his behavior to acceptable standards will not be deterred by the existence or nonexistence of insurance coverage for the consequences of his acts.\textquoteright ); \textit{George v. Stone}, 260 So. 2d 259, 262 (Fla. Dist. Ct. App. 1972) (\textquote{The principle [that a person who is legally insane cannot be said to have acted intentionally for the purposes of intentional injury exclusion clauses] comports with the guiding principle of insurance law that exclusionary provisions are to be strictly construed against the insurer, and in favor of providing coverage in order that the purpose of insurance not be defeated.\textquoteright }).
\end{footnotesize}
within the meaning of "mental incapacity" is in harmony with the pro-
victim focus of insurance law, in that it provides compensation to inno-
cent victims "regardless of the origin of the assailant's mental derange-
ment." The language of *Ruvolo* has been used to reach just this result in
some case law. For example, in *Burd v. Sussex Mutual Insurance Co.*,
the same court that had decided *Ruvolo* seven years earlier used
*Ruvolo* to deny application of an intentional act exclusion clause to acts
committed by a voluntarily incapacitated insured. In *Burd*, the
insured was sued by the man he had shot while voluntarily intoxi-
cated. The insurer refused to defend on the grounds that the inten-
tional act exclusion clause applied. The New Jersey Supreme Court
cited *Ruvolo* for the proposition "that the concept of insanity relevant to
the exclusion clause of a liability policy [is] more expansive than the con-
cept of insanity accepted in the defense of a criminal charge." Following
this logic, the court held that the insurer bore the burden of proving
that the insured, notwithstanding his intoxication, formed the intent to
injure his victim.

This position dangerously skews the focus of insurance from the
coverage of fortuitous acts beyond the control of the insured, toward
protection against the financial consequences of the insured's choice to
ingest drugs or alcohol, essentially making such conduct "risk-free." One of the reasons behind intentional act exclusionary clauses is the pub-
lic's interest in deterring dangerous behavior. If the results of volun-
tary intoxication are outside the effect of such a clause, as arguably they
are under the *Ruvolo* "derangement of the intellect" language, the deter-
rence rationale is completely defeated. The drug and alcohol problems in
the United States powerfully argue against such a policy choice.

Recent reports indicate that the abuse of alcohol and other illegal

248. Id. at 399, 267 A.2d at 15.
249. Id., 267 A.2d at 15. Other courts have also refused to apply exclusion clauses to insureds
who commit torts while voluntarily intoxicated. See, e.g., State Farm Fire & Casualty Co. v.
Morgan, 185 Ga. App. 377, 364 S.E.2d 62 (1987) (adopting the view that if an insured is so
intoxicated as to be unable to know, understand, and intend to do the act, the act is not intentional),
Super. 53, 410 A.2d 718 (App. Div.) (relying on *Burd* to state in dicta that voluntary intoxication
can negate intent within the meaning of an insurance policy), appeal denied, 84 N.J. 389, 420 A.2d
317 (1980); Kenna v. Griffin, 4 Wash. App. 363, 481 P.2d 450 (1971) (holding that while
intoxication can diminish intent, the trial court properly found that the insured was not so affected
by alcohol that he could not form the requisite intent).
250. See supra text accompanying notes 1 & 8 (discussing the purpose of insurance coverage).
251. See R. JERRY, supra note 26, at 313; see also supra text accompanying notes 12-16.
drugs is not limited to a small proportion of Americans: substance-abuse disorders affect 3.8% of the population at any given time, and can be expected to affect 16.4% of all adults at some time during their lives. Alcohol abuse is overwhelmingly more common than abuse of all other drugs combined, but cocaine usage is rapidly becoming a problem of enormous proportions. Cocaine usage doubled between 1982 and 1987, when 5.2 million Americans reportedly ingested the drug. One year later, the White House Conference for a Drug-Free America estimated that 6 million Americans were cocaine users.

The American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders contains descriptions of symptoms that are induced by the consumption of various intoxicating substances. For example, alcohol intoxication can create aggressiveness, impaired judgment, irritability, and is frequently associated with the commission of criminal acts including murder. Cocaine intoxication can result in fighting, persecutory delusions, and aggressive or violent action against perceived enemies. Cocaine and other illegal drugs have, like alcohol, been linked to the commission of criminal acts.

Reports indicate that the inclusion of voluntary intoxication among the conditions vitiating intentional act exclusionary clauses could have a substantial impact on insurers, opening them up to widespread liability. Moreover, the coverage of damages arising from voluntary intoxication directly conflicts with the well-established judicial policy of preventing tortfeasors from insuring against their own intentional wrongdoing.

Several courts have emphasized this policy in interpreting exclusion clauses where the insured was intoxicated at the time of his tortious conduct. In Allstate Insurance Co. v. Sherrill, the court held that an insured may not assert a defense to an exclusionary clause based on lack

261. See supra notes 12-16 and accompanying text.
of capacity to form an intent, when that lack of capacity is solely based
on the voluntary ingestion of alcohol and/or drugs.\textsuperscript{263} In reaching its
conclusion, the court stated that “[p]ublic policy demands that a volun-
tary departure of one's good judgment and rational decision-making abil-
ities should not permit the insured to abrogate his financial responsibility
to those he brutally injures.”\textsuperscript{264} Similarly, in \textit{Hanover Insurance Co. v. Newcomer},\textsuperscript{265} the court affirmed a lower court's ruling that the inten-
tional act exclusionary clause applied to the physical assault committed
by the intoxicated insured.\textsuperscript{266} Determining that the intent to harm could
be inferred from the insured's act of wildly swinging a machete, the court
stated that although the evidence established that he was under the influ-
ence of intoxicants and marijuana, this evidence was “of no consequence,
for the law must not permit the use of such stimuli to become a defense
for one's actions.”\textsuperscript{267}

Voluntarily intoxicated insureds must not have the ability to com-
mit a wrongful act while protecting themselves from the civil conse-
quences; incapacitation due to the ingestion of alcohol and drugs should
not be equated with incapacitation due to the presence of an endemic
mental disease or defect. The public policy of deterrence of tortious acts
has little force when the insured is mentally ill, as it is unlikely that a
mentally ill insured would be influenced at all by the existence of insur-
ance coverage. However, in the situation of voluntary intoxication, the
deterrence rationale retains its persuasive force. Because the “derange-
ment of the intellect” language in \textit{Ruvolo} and other cases suggests that
drug- or alcohol-incapacitated insureds who harm others can avoid the
operation of an intentional act exclusionary clause, that language is in
direct conflict with the foregoing line of reasoning and should be
rejected.\textsuperscript{268}

\textsuperscript{267} \textit{Id.; see also} Travelers Ins. Co. v. Cole, 631 S.W.2d 661 (Mo. Ct. App. 1982) (holding that
the insured's ingestion of alcohol, ampicillin, and codeine was of no consequence); American Family
Mut. Ins. Co. v. Peterson, 405 N.W.2d 418 (Minn. 1987) (holding that the reasonable expectations
of the insured about his policy coverage would not include assaults committed while voluntarily
intoxicated, and reasoning that an insured should not be given any license to commit malicious acts).
\textsuperscript{268} Some commentators have advocated allowing insurers the right of subrogation against the
insured in situations where an innocent person is injured by an insured who was voluntarily
intoxicated or otherwise committed an intentional act. \textit{See Note, supra} note 15, at 1054; \textit{Case
Comment, supra} note 12, at 169. This solution has been touted as resolving the conflict between the
policies of compensating the victim on the one hand, and deterring wrongful conduct by the insured
on the other. \textit{See Note, supra} note 15, at 1054. The solution has received some limited case support,
most notably in Ambassador Insurance Co. v. Montes, 76 N.J. 477, 388 A.2d 603 (1978), where the
New Jersey Supreme Court granted an insurer a right of subrogation against an insured who had set
fire to his insured building and killed several people.
However, such a right to subrogation is a dramatic departure from established doctrine:
B. The "Non-Rule" Rules

Very different problems arise in cases presenting no specific standards for evaluating an insured’s insanity. In contrast to cases such as *Ruvolo*,269 *Rodef Sholom*,270 *Globe*,271 and *George*,272 which present specific cognitive and volitional criteria to judge an insured's mental condition, the opinions in cases such as *Turner*,273 *Arkwright*,274 *Dichtl*,275 *Mangus*,276 and *Mautino*277 give no more guidance than a statement that an insane insured cannot act intentionally for the purposes of exclusionary clauses.278 The problem with these cases is not in the interpretation of various mental or behavioral criteria, but rather that they do not provide any criteria at all. As a consequence, these cases trigger many of the same issues surrounding the New Hampshire and *Durham* tests for criminal insanity, which also provide no specific cognitive or volitional guidelines for the jury to use to determine insanity.279 The theory behind the New Hampshire and *Durham* tests was that psychiatrists, who are the experts at determining insanity, should be allowed a wide purview of testimony, but in practice psychiatrists were deciding the legal standards for insanity on an ad hoc basis without any kind of review.280

Like the *Durham* and New Hampshire tests, insurance cases that ordinarily, no right of subrogation can arise in favor of an insurer against its own insured. By definition, an insurer has a right of subrogation only against third persons, to enforce rights of the insured. Ordinarily, courts do not grant an insurer any rights of subrogation as against the insured. 16 J. COUCH, Cyclopedia of Insurance Law § 61:136 (R. Anderson rev. 2d ed. 1983). In addition, the case support that does exist for such a position is problematic. The holding in *Montes* has been limited to situations in which the insured's policy contains no specific clause excluding liability coverage for his intentional acts. See *Allstate Ins. Co. v. Malec*, 104 N.J. 1, 12, 514 A.2d 832, 838 (1986). Commentators have used an automobile insurance case, *Nationwide Mutual Insurance Co. v. Roberts*, 261 N.C. 285, 134 S.E.2d 654 (1964), to support the right to subrogation. See Note, supra note 15, at 1054 n.72. However, within the *Roberts* opinion, the court carefully distinguished between compulsory automobile insurance and other "voluntary" insurance. *Roberts*, 261 N.C. at 290-91, 134 S.E.2d at 659. The court awarded the insurer the right to subrogation based on a specific section of the compulsory automobile insurance legislation, and consequently whatever subrogation is allowed appears limited to analogous situations. Id. at 293, 134 S.E.2d at 661.

278. See supra text accompanying notes 181-83.

280. For a discussion of the New Hampshire and *Durham* tests under criminal law, see supra text accompanying notes 126-29.
provide no guidelines for their insanity tests transfer the standard-making power to psychiatrists and are therefore susceptible to the resultant problems. One can argue that essentially undefined rules comport well with the pro-coverage public policies behind insurance law, by giving a court more latitude to find an insured insane and thus preserve coverage despite an exclusionary clause. However, under such "non-rules," it seems equally likely that the trial will become a battle of opposing experts, leaving the jury or judge essentially without guidance as to what behavior is to be regarded as legally insane and thus beyond the scope of an intentional act exclusionary clause. Such a rule is ad hoc; it is difficult to apply consistently across varying facts. One commentator has pointed out that "[t]he law cannot simply adopt a concept developed by psychiatrists for therapeutic purposes . . . . [N]o other discipline's conceptualization can safely be adopted and plugged into a legal formula."281 The American Psychiatric Association itself has warned that the clinical and scientific considerations behind its diagnostic manual "may not be relevant to considerations in which [the manual] is used outside clinical or research settings, e.g., in legal determinations."282

Specific mental and behavioral criteria are both well-established and have received wide acceptance in insurance litigation where the insured's mental capacity is in question.283 The criteria should be retained and explicitly put forth in order to provide guidelines to the court in its factfinding function. Such criteria provide a scope broad enough to protect the public interest in compensating the victim, while at the same time narrow enough to avoid confusion and inconsistency caused by an absence of all criteria.

C. Problems of Ambiguity in Drafting the Criteria

Tests including specific criteria for determining legal insanity in this context are not immune from criticism. The unclear separation of the cognitive and volitional prongs in Ruvolo has already been discussed,284 as have the difficulties with the use of "derangement of the intellect" in Ruvolo and related cases.285 In addition, several other formulations of an insurance-focused insanity test suffer from ambiguities and unclear language in the drafting of their criteria that reduce their effectiveness.

The test developed in Congregation of Rodef Sholom v. American Motorists Insurance Co.286 is a prime example of an ambiguous test.

281. M. Moore, supra note 77, at 227.
282. American Psychiatric Ass'n, supra note 256, at xxvi.
283. See supra text accompanying notes 132-82 (discussing the Ruvolo line of cases applying both cognitive and volitional criteria).
284. See supra text accompanying note 150.
285. See supra text accompanying notes 235-68.
While it avoids using the term "derangement of the intellect" for the better "mental disease or defect,"287 and more clearly separates the cognitive and volitional criteria than does Ruvolo,288 the test employs circular logic within the cognitive element. As stated, the cognitive prong declares that if an insured suffered from a mental disease or defect that "deprived him of capacity to intend to [commit a wrongful act] and cause the damage complained of,"289 then the insured did not act intentionally. The problem here is that intention is what the test is supposed to determine. Instead of defining this "capacity to intend" as, for instance, an inability to understand the nature and consequences of an act or its moral wrongfulness, the Rodef Sholom test begs the question by using the word "intend" within its criterion. In effect, its criterion provides little or no guidance to a court attempting to determine if an insured is sufficiently cognitively impaired to escape the operation of an exclusionary clause.

In addition, the Rodef Sholom court stated that the M'Naghten and A.L.I. criminal insanity tests were inadequate to serve the policies behind insurance law, which demand a broad interpretation of insanity, even though the A.L.I. test "more nearly comports to the proper rule."290 It is ironic, therefore, that the Rodef Sholom test may be more restrictive than the A.L.I. standard. The two tests share basically the same structure, since they both include cognitive and volitional prongs. However, the Rodef Sholom test as written seems to posit a complete deprivation of cognitive or volitional capacity,291 whereas the A.L.I test only demands a lack of substantial capacity.292 If, as the opinion states, the public's interest in the compensation of victims demands that exclusionary clauses be interpreted as narrowly as possible,293 it is counterproductive to include language limiting the pool of insureds who might qualify under the standard to an even narrower pool than a criminal test.

Rosa v. Liberty Mutual Insurance Co.294 also provides an excellent example of unclear drafting. Unlike Rodef Sholom, the cognitive and volitional elements, although present, are not clearly separated into distinct criteria. Instead, the language of the test combines both elements indiscriminately. As the court states, the insured's mental condition

287. Id. at 697, 154 Cal. Rptr. at 352.
288. See supra text accompanying note 180.
289. Rodef Sholom, 91 Cal. App. 3d at 697, 154 Cal. Rptr. at 352 (emphasis added).
290. Id., 154 Cal. Rptr. at 352
291. In its test, the court stated, "If [the insured] was suffering from a mental disease or defect which deprived him of capacity to intend ... or which deprived him of the capacity to govern his conduct in accordance with reason, then he did not act intentionally ... " Id., 154 Cal. Rptr. at 352 (emphasis added).
293. See Rodef Sholom, 91 Cal. App. 3d at 697, 154 Cal. Rptr. at 352.
“deprived him of the ability to govern his conduct in accordance with reason and intent, to judge the nature, character and consequence of his act and to resist the impulses to do other than what he did.”

The first volitional prong, like that in *Ruvolo*, contains what can be seen as cognitive elements in the phrase “accordance with reason and intent.” However, the *Rosa* test’s addition of the word “intent” to the *Ruvolo* “accordance with reason” language is circular and adds nothing to the meaning of the criterion. *Rosa* expands upon *Ruvolo*’s cognitive element with the phrase “nature, character and consequence,” which adds a clearer sense of judicial standards. But the *Rosa* test then combines the cognitive element with the second volitional “resistance to impulse” element by using the conjunctive “and” instead of “or.” Unlike the test in *Rodef Sholom*, which uses an “or” disjunctive between the cognitive and volitional elements, the *Rosa* test is not clearly broken into alternative prongs which would declare an act unintentional under either. Instead, under *Rosa*, it appears that both elements must be present. Whether or not such a result was intended, an insured who suffered from only one of the two conditions would probably be excluded under the *Rosa* test.

In order to comport with the public policies favoring a broader definition of insanity in insurance cases, a test must provide distinct, alternative cognitive and volitional prongs. In addition, a test must require that the insured lack only substantial capacity, not all capacity. Lastly, a workable test must avoid using the word “intent” within its language in order to refrain from circular logic.

**D. The “Minimal Cognitive Awareness” Tests**

The cases following *Wagner* use only a single cognitive awareness criterion: that of understanding the nature and consequences of one’s act. As a result, they do provide a certain clarity and simplicity in the determination of an insured’s insanity. However, by using only one of the two *M’Naghten* prongs, they are extremely underinclusive, retaining coverage for only a very small percentage of people considered mentally ill. For example, the act of an insured who suffers from an overwhelming delusion that murder is acceptable or even demanded of him would not reflect sufficient impairment for the act to qualify as not intentional; nor would the acts of a cognitively competent insured who was unable to restrain his actions due to uncontrollable compulsions be

---

295. *Id.* at 409.
296. See supra text accompanying note 150.
297. For a discussion of the *Wagner* line of cases, which consider only the cognitive prong of the *M’Naghten* test in making findings of insanity, see supra text accompanying notes 184-234.
298. See supra text accompanying notes 87-88 (noting that it is rare that a person will suffer from complete cognitive delusions).
without intent. Essentially, an insured who retains only a minimal level of cognitive awareness is declared able to form an intention, and is precluded from insurance coverage for his deluded or compelled acts.

That position is not only rejected by all the criminal standards but is also in direct conflict with public policies arguing for a broader view of insanity for the purposes of insurance litigation. Instead of supporting the doctrine that exclusionary clauses should be strictly construed against the insurer in order to reinforce the public interest in the compensation of victims, such a standard does the opposite: it gives an exclusionary clause sweeping powers to cover acts by insureds who in virtually any other context would be declared insane. Such a result is indefensible in insurance litigation, and should be rejected in favor of the inclusion of a cognitive criterion that encompasses the understanding of an act's moral wrongfulness, and a volitional criterion that would encompass compelled acts.

IV
A PROPOSAL FOR A NEW STANDARD OF INSANITY FOR USE IN INSURANCE CASES

The interpretation of a liability policy's intentional act exclusionary clause when the insured may be insane presents a vexing problem for courts attempting to balance the competing public policies governing insurance law. This Comment has attempted to show that the various tests courts traditionally apply in this situation suffer from flaws that either damage their clarity and effectiveness across different cases, or result in an overbroad or an overnarrow scope. To avoid these problems, and to strike the delicate balance between the policies emphasizing the deterrence of wrongful conduct and the policies demanding a narrow construction of exclusionary clauses, this Comment proposes a new standard. Acts would be deemed unintentional if

the insured suffered from a mental disease, defect, or other involuntarily caused mental impairment which substantially deprived the person of the ability to understand the nature and consequences or moral wrongfulness of the act, or which substantially deprived the person of the ability to control his conduct despite his understanding of the act or its wrongfulness.

This proposed standard uses familiar terminology from existing tests under the rationale that "the task of reform is likely to be easier if reli-

believed God had commanded him to kill the victim, but nevertheless was found to have acted intentionally).  

300. Even M'Naghten, the narrowest of all the criminal standards, contains a provision that would excuse an individual if he could not understand the moral wrongfulness of his acts. See supra text accompanying note 91.
ance can be placed upon doctrines of respectable lineage and relatively wide acceptance.\textsuperscript{301}

Though the proposed standard presents no dramatic break from concepts and terminology used in existing tests, it contains several improvements over them. First, it avoids the inclusion of harmful acts resulting from voluntary drug or alcohol intoxication, through the requirement of a “mental disease or defect or other involuntarily caused mental impairment.”\textsuperscript{302} Involuntary intoxications, such as an unexpected reaction to drugs taken pursuant to medical advice, would be included under this standard. In this respect, the proposed test balances the public policy deterring insureds from committing harmful acts by denying them coverage, and the policies recognizing a strong interest in the compensation of victims.

Second, the test contains and specifically delineates alternative cognitive and volitional criteria to avoid leaving courts without guidelines to judge an insured’s legal insanity.\textsuperscript{303} and to ensure a sufficiently broad scope of application.\textsuperscript{304} Under the cognitive prong, the test retains the two \textit{M’Naghten} elements—its criteria include those insureds who are actively hallucinatory and believe they are performing an entirely different act, as well as those who do not understand the wrongfulness of their acts. Laid out in this way, there can be no confusion as to whether the test includes a cognitive element, as there is in the \textit{Ruvolo} test.\textsuperscript{305} The proposed test also contains a criterion focused as directly as possible on the insured’s volitional capacity. As stated, this criterion removes any confusion from the cognitive prong, by substituting the phrase “despite his understanding of the act or its wrongfulness” for such phrases as “in accordance with reason.”\textsuperscript{306} Finally, the proposed test demands only a lack of substantial capacity on the part of insureds to satisfy each criterion, instead of requiring the total deprivation of capacity as suggested by other tests.\textsuperscript{307} Thus, the pool of insane insureds whose acts would avoid the operation of an exclusionary clause will not be inadvertently narrowed to parameters even more limited than those of the widely used A.L.I. criminal standard; the standard thereby adequately addresses the policy demanding the narrow interpretation of exclusionary clauses so that the public’s interest in the compensation of victims is satisfied.

The proposed test may not address all the difficulties endemic to a determination of whether a liability policy exclusionary clause bars coverage for an insane insured's acts. However, this test attempts to provide a more detailed and workable concept of insanity that takes into account the policies and doctrines involved in this area of insurance law, thus leading to more consistent and fair judgments in cases where the mental capacity of an insured is in question.
