The Transformation of Modern Administrative Law: Changing Administrations and Environmental Guidance Documents

Sam Kalen*

This Article addresses administrative law principles that apply to interpretive rules and guidance documents. Agencies today often rely heavily on the development of such documents. With the widely-touted “ossification” of the rulemaking process and the need for agencies to adapt to new circumstances, new court decisions, and changing administrations, interpretive rules and guidance documents are increasingly necessary, particularly for agencies implementing environmental and natural resource programs. Yet, administrative law principles governing the treatment of such documents are too vague. The long-standing difficulty of distinguishing between legislative (substantive) rules and non-legislative rules, when coupled with the doctrines of finality, ripeness and deference to agency interpretations all converge to demonstrate the need for clarity to ensure that new administrations will enjoy sufficient flexibility to modify such documents and change course.

The author thanks the entire faculty at Florida State University School of Law for its general support and, in particular, Robin Craig and David Markell for their helpful comments, but all the errors and omissions are solely those of the author.
"We have evolved our administrative system. We have worked out a great variety of basic forms and doctrines which have determined its structure and its relation to the other organs of government. But its operation in some respects has not been clearly foreseen. It is to these aspects of the system that we must now direct our energies."

INTRODUCTION

Walt Disney’s movie “Chicken Little” reminds us that we should be cautious before proclaiming the end is near. But it also teaches that we should not ignore warning signs of a fragile sky. Thus when Justice Scalia warned a few years back that "[i]t is indeed a wonderful new world that the Court creates, one full of promise for administrative-law professors in need of tenure articles and, of course, for litigators,”2 perhaps it was a signal that we should pause and reflect on whether something serious is happening or whether Justice Scalia was simply issuing another quixotic opinion. This Article suggests that, hyperbole aside, there is indeed something noteworthy looming on the horizon. But it is different than what Justice Scalia portends—he was concerned that the Court had created yet another nuance in administrative law by holding that Chevron deference would apply even if an agency’s interpretation of an ambiguous statutory provision is different than a prior interpretation upheld by a court. Allowing an executive agency the ability to proffer a new interpretation, he believed, would permit an Article III court’s decision to be subverted by a subsequent executive branch decision. But he missed the underlying point. The nascent world that threatens to emerge absent greater doctrinal clarity in the field of administrative law is one where interpretations increasingly occur in informal documents, and yet the continued flexibility that agencies enjoy when issuing policy or interpretive guidance documents—such as, agency manuals, memoranda, technical documents, policy statements, and even legal opinions—might be hindered by the actions of prior administrations. The extent that past or present presidential administrations can bind or limit the flexibility of future presidential administrations is an issue that affects us all.

Every four years, the public presumably expects that the winning ticket will influence the development and implementation of policy. If Al Gore had been sworn in as President in January 2001, the American public could have anticipated that he would have acted more aggressively toward the threat of global climate change than his rival, George W. Bush. And those voting for President Bush most likely expected the slower course of action the nation has witnessed during the past eight years. With each new election cycle, the ability of the executive office to influence policy on any range of issues—such as climate change—will surface. And with each new election cycle, the executive will confront limits on its ability to change policy. Some measure of restraint on a new administration’s ability to effect change may, indeed, be necessary to avoid pernicious efforts to change policy.3

Yet, we cannot make it so difficult for a new administration to change course that the policies developed by a former administration will remain embedded in the matrix of agencies’ binding norms. Administrative agencies must enjoy flexibility, which includes the ability to issue an array of policy and interpretative guidance documents that direct the staff and inform the public of how that agency expects to perform its functions—presumably in a manner consistent with the then-current administration. The ability to issue such documents is critical; agencies could not function effectively if they had to engage in a notice-and-comment rulemaking under the Administrative Procedure Act (APA) each time they alerted their staff and the public about new policy choices, new guidance, or new interpretations. Notice-and-comment rulemaking is cumbersome, often described as ossified: it is both rigid and difficult to maneuver, making it difficult to achieve timely results. When available, therefore, agencies often employ other devices to address policy preferences: legal opinions from agency counsel; management policies; guidance documents; manuals; instruction memoranda; and regulatory

guidance letters. Just as the need to issue such documents is critical, the ability to change or modify them with sufficient ease is equally critical; otherwise, the hands of a new administration can be tied by the artfulness of a prior administration.

Agencies' use of informal devices is so pervasive that the issue has not gone unnoticed in Congress. When the Republican Party held the majority, the House Committee on Government Reform expressed concern that the devices employed by agencies occasionally might be used as backdoor rulemaking attempts and that agencies should make clear that such documents are not legally binding on the public.⁴ Recently, toward the end of the Bush administration, the Office of Management and Budget and the President similarly announced reservations about the increased use of agency guidance—and arguably sought to curtail their use through the issuance of an OMB Bulletin and Executive Order No. 13422.⁵

Much of the concern about the use of agency guidance documents has been misdirected. These administrative tools are unquestionably needed in the modern era of increasing regulatory programs. Indeed, the ability to provide the public with easy access to information through the internet has transformed the way administrative agencies operate. The incisive issue, then, is not the use of these devices; rather, it is how courts and parties should treat them. Are they final agency actions subject to judicial review? Are they, in effect, “legislative” rules that must be promulgated in accordance with the APA's notice-and-comment rulemaking procedures? Are they binding and enforceable against the agency if the agency deviates from them? Or, if they contain an interpretation of an agency’s regulation, can they be modified without going through notice-and-comment rulemaking? And finally, to the extent any such device contains an interpretation of a statute or regulation administered by the issuing agency, should a court afford deference to that interpretation, and will that same standard of deference apply when a new administration offers a different interpretation?

This Article posits that the failure of courts to articulate a coherent approach toward informal agency devices threatens to undermine the flexibility necessary for new administrations to alter policies of former administrations.

---

This trend, if not checked, could lead to a paralysis in agency flexibility and an inability to effectively change course as new administrations come to power. In short, we could be on the precipice of a new era of administrative law. The subject of this Article is how we got here and how to avert this possibility.

In Part I, the Article briefly traces the development of the modern rulemaking process. It explains how agencies came to rely less on adjudication and more on rulemaking as the predominate mode of policy making. Now that we are several decades into this rulemaking phase of modern administrative law, several problems have emerged. With what is now commonly referred to as the ossification of the rulemaking process, the ability to engage in rulemaking has become cumbersome. In lieu of rulemaking, agencies are employing—perhaps with increasing frequency—informal tools to constrain their employees and inform the public. These tools, collectively referred to as guidance documents, are essential to the functioning of the modern executive agency.

Yet, will evolving principles of administrative law make it unduly difficult to change such guidance documents when new administrations come to power? If so, the ossification of the rulemaking process, when coupled with other fluid and potentially chilling principles of administrative law, may inhibit the flexibility of a new administration to effectuate change. Part II of the Article addresses how courts, and in particular the D.C. Circuit, have vacillated on their treatment of guidance documents. While concerned about their proliferation, courts are more recently appearing less inclined to conclude that such documents are impermissible attempts to avoid notice-and-comment rulemaking. And while the D.C. Circuit may signal to new administrations that their hands are not tied, its decisions provide little comfort absent revisiting some fundamental principles of finality, ripeness and the doctrine of deference. In Parts III and IV, the Article articulates the relationship of these various doctrines and how they each affect the flexibility of future administrations. Finally, in Part V, the Article suggests how all these doctrines, appropriately applied, could avoid vesting in one administration the ability to force a future administration into a notice-and-comment rulemaking process when it seeks to change course from its predecessor’s guidance documents.

I. FROM AD HOC DECISION MAKING TO MODERN ADMINISTRATIVE LAW

As we embark on what could be called a new phase in the development of administrative law, a brief précis of how we arrived here is warranted. The Special Counsel to President Eisenhower once observed, "[T]he development of administrative agencies in this country has not proceeded according to any basic plan. No master blueprint has been responsible for their creation and growth. Each has been an ad hoc solution to meet a particular exigency."6

Those words continue to resonate today, and perhaps through an appreciation of history and present circumstances, the course of administrative law will proceed more from the adoption of a purposeful and intellectually coherent structure than from an ad hoc response.

Although administrative and quasi-administrative agencies have existed for quite some time, indeed the roots of administrative law can be traced back to Federalist era in the 1780s, it was not until the early part of this century, first with the progressive era and then with the New Deal, that the modern regulatory state emerged with any prominence. Modern principles of administrative law generally emerged during the New Deal era, with the "burgeoning of the administrative process." The next phase of administrative law involved the general acceptance of the administrative regulatory process within our constitutional and political structure, resulting in the passage of the Administrative Procedure Act of 1946.

This led to a third phase involving a heightened focus on critical administrative law issues and proposals for making the administrative process function more efficiently, effectively, and fairly. Commentators generally

promoted increased use of rulemaking over the more traditional use of agency adjudication—then commonly referred to as either the “common law” approach or ad hoc policy making. In Securities & Exchange Commission v. Chenery Corp. (Chenery II), the Supreme Court held that agencies could choose between establishing policies on a case-by-case basis—that is, on an ad hoc basis in an adjudicatory proceeding—or through a rulemaking process. The Court nevertheless offered words of caution, noting that the flexibility to proceed in an ad hoc fashion was necessary to address unanticipated situations, where the agency lacked sufficient experience such that it needed to proceed carefully and incrementally employ a case-by-case approach.  

13. SEC v. Chenery Corp., (Chenery II), 332 U.S. 194 (1947). See generally Russell L. Weaver & Linda D. Jellum, Chenery II and the Development of Federal Administrative Law, 58 ADMIN. L. REV. 815, 816 (2006) (Chenery II “qualifies as our most underrated administrative law decision.”). In Securities and Exchange Commission v. Chenery Corp. (Chenery I), 318 U.S. 80 (1943), the Court did not address the issue squarely, but it signaled the approach it would take in Chenery II in American Power & Light Co. v. Securities and Exchange Commission, 329 U.S. 90, 106 (1946) (“Nor is there any constitutional requirement that the legislative standards be translated by the Commission into formal and detailed rules of thumb prior to their application to a particular case. If that agency wishes to proceed by the more flexible case-by-case method, the Constitution offers no obstacle. All that can be required is that the Commission’s actions conform to the statutory language and policy.”).

14. The case involved the Securities and Exchange Commission (SEC) review of a reorganization plan (and treatment of stock by management) for a public utility holding, pursuant to the Public Utility Holding Company Act of 1935. In Chenery I, 318 U.S. 80 (1943), the Court, in a 5-3 decision (Douglas, J., not participating), remanded the SEC’s decision. Writing for the majority, Justice Frankfurter held that the SEC incorrectly applied judicial principles to the treatment of the stock in the reorganization. He further observed:

"The difficulty remains that the considerations urged here in support of the Commission’s order were not those upon which its action was based. The Commission did not rely upon “its
Yet, echoing the apparent prevailing sentiment, the General Counsel to the Federal Communications Commission warned that the future of the administrative process could well rest on whether agencies choose wisely between the processes. "[I]n general, rule-making is a sounder way of proceeding than the case-by-case method or general declarations of policy and that, wherever appropriate, it should be employed."15 This same theme pervades Peter Strauss' 1974 classic inquiry into the Department of the Interior's administration of the 1872 Mining Law.16 Such recommendations often encouraged more widespread use of interpretive rules and statements of special administrative competence”; it formulated no judgment upon the requirements of the "public interest or the interest of investors or consumers" in the situation before it. . . . Had the Commission, acting upon its experience and peculiar competence, promulgated a general rule of which its order here was a particular application, the problem for our consideration would be very different. Whether and to what extent directors or officers should be prohibited from buying or selling stock of the corporation during its reorganization, presents problems of policy for the judgment of Congress or the body to which it has delegated power to deal with the matter.

318 U.S. at 92. The Court added that conduct could only be outlawed if the agency to which Congress delegated the authority to prescribe standards did so, such as “acting under the rule-making power delegated to it.” Id. at 92. See generally Kevin M. Stack, The Constitutional Foundations of Chenery, 116 Yale L.J. 952 (2007) (describing the role of Chenery and the principle that a court may review only the agency’s asserted reasons for its decision as a condition for affording Chevron deference). In Chenery II, although the Court indicated that the agency could act in an ad hoc manner, it nonetheless arguably cabined its language by noting that it did not mean to suggest in Chenery I that rulemaking was the only option. Chenery II, 332 U.S. at 201–02. It further noted that the SEC, unlike a court, has less reason not to act by rulemaking when formulating new standards of conduct. Id. at 202. While the majority disclaimed any rigid approach, it emphasized that “[t]he function of filing in the interstices of the Act should be performed, as much as possible, through this quasi-legislative promulgation of rules to be applied in the future.” Id. Perhaps predictably, Justice Frankfurter joined Justice Jackson’s dissent in Chenery II, with Justice Jackson caustically and exasperatingly writing that “[t]he difference between the first and the latest decision of the Court is thus simply the difference between holding that administrative orders must have a basis in law and a holding that absence of a legal basis is no ground on which courts may annul them.” Id. at 212 (Jackson, J., dissenting). Whether in a particular case or in a rulemaking, Justice Jackson indicated the basis in law would come in a rulemaking. For a modern day commentary, see generally William D. Araiza, Limits on Agency Discretion to Choose Between Rulemaking and Adjudication: Reconsidering Patel v. INS and Ford Motor Co. v. FTC, 58 ADMIN. L. REV. 899 (2006). Cf. Aeolus Systems, LLC v. United States, 79 Fed. Cl. 1 (2007) (rejecting argument that agency had to proceed through rulemaking in lieu of adjudication); see also Muniz v. Sabol, 517 F.3d 29 (1st Cir. 2008) (permitting agency to address generic issues through rulemaking in lieu of individualized adjudication).

policy. By 1974, Judge Skelly Wright could justifiably proclaim that “[a]dministrative law has entered an age of rulemaking.”

Now, several decades into this new age of rulemaking, agencies are finding the development of regulations increasingly more challenging. This is commonly referred to as the ossification of the rulemaking process. To begin with, agencies generally must comply with the traditional rulemaking requirements under section 553 of the APA, or similar alternative requirements under a specific statute for particular programs. For informal rulemakings under section 553, federal agencies must provide interested parties notice in the Federal Register and an opportunity for comment, as well as provide a statement of basis and purpose to support any final rulemaking decision.

Congress then imposes additional, often-cumbersome, hurdles in a regulatory path, such as the requirement for an initial and final Regulatory Flexibility Analysis, the sixty day congressional layover period for certain

---

21. For example, the Clean Air Act contains its own rulemaking provisions. See 42 U.S.C. § 7607(d) (2006).

22. 5 U.S.C. § 553. “This requirement [to provide a statement of basis and purpose] is not meant to be particularly onerous. It is enough if the agency’s statement identifies the major policy issues raised in the rulemaking and coherently explains why the agency resolved the issues as it did.” Nat’l Mining Ass’n v. Mine Safety & Health Admin., 512 F.3d 696, 700 (D.C. Cir. 2008) (citations omitted). See also Nat’l Nutritional Foods Ass’n v. Weinberger, 512 F.2d 688, 701 (2d Cir. 1975) (statement must only be sufficiently detailed to permit judicial review).

major final rules,\textsuperscript{24} the Unfunded Mandates Reform Act of 1995,\textsuperscript{25} the Paperwork Reduction Act,\textsuperscript{26} the Data Quality Act,\textsuperscript{27} and the Federal Advisory Committee Act.\textsuperscript{28} Congress occasionally further encumbers a rulemaking proceeding by imposing specific requirements on an agency’s exercise of discretion, such as the 1996 amendments to the Safe Drinking Water Act, which requires a fairly specific risk assessment process and cost-benefit analysis for certain activities.\textsuperscript{29}

Nor has the executive branch been silent. From the early establishment of the Office of Management and Budget (OMB),\textsuperscript{30} to the preparation of budgets,

\begin{itemize}
\item \textsuperscript{25} 2 U.S.C. § 1501 (2006), requiring that, prior to issuing either a proposed or final rule that may result in the aggregate expenditure of $100 million or more (in any one year) to State, local, and tribal governments, or the private sector, executive branch agencies produce a written analysis of the estimated costs of compliance. See generally Daniel E. Troy, \textit{The Unfunded Mandates Reform Act of 1995}, 49 ADMIN. L. REV. 139 (1997).
\item \textsuperscript{30} The OMB is institutionally skeptical of regulation, or at least environmental regulation. For critical analysis discussing OMB’s involvement with environmental regulation, see William D. Araiza, \textit{Judicial and Legislative Checks on Ex Parte OMB Influence Over Rulemaking}, 54 ADMIN. L. REV. 611 (2000); Lisa Heinzerling, \textit{Statutory Interpretation in the Era of OIRA}, 33 FORDHAM URB. L.J. 1097 (2006); Richard J. Lazarus, \textit{The Tragedy of Distrust in the Implementation of Federal Environmental Law}, 54 LAW & CONTEMP. PROBS. 311, 330-34 (1991); Sidney A. Shapiro, \textit{OMB and the Politicization of Initial and then final regulatory flexibility analysis describing the impact of the rule on small entities (specifically defined), except when the agency head certifies that the rule will not have a significant economic effect on a substantial number of small entities. See, e.g., Aeronautical Repair Station Ass’n, Inc. v. FAA, 494 F.3d 161, 174-178 (D.C. Cir. 2007) (discussing challenges under the Regulatory Flexibility Act).

25. 2 U.S.C. § 1501 (2006), requiring that, prior to issuing either a proposed or final rule that may result in the aggregate expenditure of $100 million or more (in any one year) to State, local, and tribal governments, or the private sector, executive branch agencies produce a written analysis of the estimated costs of compliance. See generally Daniel E. Troy, \textit{The Unfunded Mandates Reform Act of 1995}, 49 ADMIN. L. REV. 139 (1997).

30. The OMB is institutionally skeptical of regulation, or at least environmental regulation. For critical analysis discussing OMB’s involvement with environmental regulation, see William D. Araiza, \textit{Judicial and Legislative Checks on Ex Parte OMB Influence Over Rulemaking}, 54 ADMIN. L. REV. 611 (2000); Lisa Heinzerling, \textit{Statutory Interpretation in the Era of OIRA}, 33 FORDHAM URB. L.J. 1097 (2006); Richard J. Lazarus, \textit{The Tragedy of Distrust in the Implementation of Federal Environmental Law}, 54 LAW & CONTEMP. PROBS. 311, 330-34 (1991); Sidney A. Shapiro, \textit{OMB and the Politicization of Initial and then final regulatory flexibility analysis describing the impact of the rule on small entities (specifically defined), except when the agency head certifies that the rule will not have a significant economic effect on a substantial number of small entities. See, e.g., Aeronautical Repair Station Ass’n, Inc. v. FAA, 494 F.3d 161, 174-178 (D.C. Cir. 2007) (discussing challenges under the Regulatory Flexibility Act).}
and finally to issuing a variety of Executive Orders mandating consideration of certain issues in various types of rulemakings, the executive office affects—albeit often subtly—the numerous political and non-political federal employees who must decide whether or how to engage in a rulemaking effort. Occasionally White House involvement is motivated by ideological positions, such as Vice President Dan Quayle’s Council on Competitiveness, which reviewed regulatory agendas for their impact on business. At other times, the involvement is perhaps benign, but time-consuming, such as the Vice President Al Gore’s effort to re-draft regulations in plain English. While considerable debate surrounds the exact nature and efficacy of presidential involvement, few question that it occurs. A recent example is the Bush White House’s directive...
to the Environmental Protection Agency (EPA) that the agency not set a separate national ambient air quality seasonal standard for ozone under the Clean Air Act (CAA).  

And finally, courts further contribute to the ossification of rulemaking. Once an agency surmounts the battery of regulatory hurdles, it often must then defend its action in court. This now means surviving a "hard look" into the administrative record and justification for the agency's regulatory decision. Through the APA, Congress directed that reviewing courts explore whether the agency acted "arbitrarily or capriciously, abused its discretion, or otherwise acted contrary to law." Largely developed by the D.C. Circuit during the 1970s, the "hard look" doctrine provides courts with the justification for ensuring an agency has examined "the relevant data and articulate[d] a satisfactory explanation for its action including a 'rational connection between the facts found and the choice made. '  

A reviewing court, moreover, will not occur simply by the appointment of politically aligned superiors in an agency, or through interagency task forces, and sometimes even with the involvement of other departments, including the Department of Justice or through communications with the White House's Council on Environmental Quality. General surveys (or questionnaires to former agency officials, as the authors used) will not portray a complete picture, without examining particular agency policies or "policy-laden" rulemaking efforts. For discussions of presidential control, see Colin S. Diver, Presidential Powers, 36 AM. U.L. REV. 519 (1987); Robert V. Percival, Separation of Powers, the Presidency and the Environment, 21 J. LAND RESOURCES & ENVTL. L. 25 (2001); Robert V. Percival, Presidential Management of the Administrative State: The Not-So-Unitary Executive, 51 DUKE L.J. 963 (2001); Lawrence Lessig & Cass R. Sunstein, The President and the Administration, 94 COLUM. L. REV. 1 (1994); Mark Seidenfeld, A Big Picture Approach to Presidential Influence on Agency Policy-Making, 80 IOWA L. REV. 1 (1994); Peter M. Shane, Political Accountability in a System of Checks and Balances: The Case of Presidential Review of Rulemaking, 48 ARK. L. REV. 161 (1995); Peter L. Strauss, Presidential Rulemaking, 72 CHI.-KENT L. REV. 965 (1997).

34. Steven D. Cook, White House Defends Intervention in EPA Decision on Ozone, 39 BNA ENVTL. REP. 12, 542 (2008).

sustain an agency's action on a basis or rationale other than as supplied by the agency in the administrative proceeding.38 The hard look doctrine, whether rightfully so or not,39 arguably discourages agencies from engaging in a rulemaking process that it ultimately might be required to do over.40 Judge Kavanaugh, of the D.C. Circuit, recently observed that
[the] judicially created obstacle course can hinder Executive Branch agencies from rapidly and effectively responding to changing or emerging issues within their authority, such as . . . effectuating policy or philosophical changes in the Executive’s approach to the subject matter at hand. The trend has not been good as a jurisprudential matter, and it continues to have significant practical consequences for the operation of the Federal Government and those affected by federal regulation and deregulation.\textsuperscript{41}

Quite predictably, therefore, federal agencies lean toward interpretive rules and policy guidance whenever possible. The APA exempts from notice-and-comment rulemaking “interpretive rules, general statements of policy, or rules of agency organization, procedure, or practice.”\textsuperscript{42} Agencies also may dispense with the requirements for notice-and-comment when they have good cause,\textsuperscript{43} and may under appropriate circumstances even issue interim final or direct final rules.\textsuperscript{44} It appears that Congress now may encourage such abbreviated rulemakings, as it has done, for instance, in the Energy Independence and Security Act of 2007, where it calls for “accelerated”

rulemakings and "direct final" rules if the agency does not receive any opposition.45

Today, federal agencies could not function effectively without the ability to issue policy guidance and interpretive rules.46 Interpretive rules, whether in the form of a manual or a legal opinion, serve the critical function of informing agency personnel of how to interpret or apply a statute or regulation. Absent such documents, agency personnel could interpret or apply a particular regulation or statute inconsistently in various regional or field offices.47 Also,

agency personnel often need guidance on how to apply a particular statute or regulation in light of changing legal doctrines or the effect of a particular court decision.48

The need for technical guidance is acutely important to environmental and natural resource agencies. The EPA arguably could not function without guidance documents, and it issues guidance covering virtually all of its programs, ranging from notice on pesticide registration labeling,49 federally permitted releases of air pollutants under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA),50 compliance and enforcement under the various titles of the CAA,51 as well as on how to administer the Clean Water Act (CWA).52 The agency maintains an online

database for its solid and hazardous waste program under the Resource Conservation and Recovery Act (RCRA), called RCRA Online, which includes a host of guidance and interpretive documents governing the program’s administration.\(^{53}\) The U.S. Army Corps of Engineers (“the Corps”) administers its section 404 CWA wetlands program in accordance with a delineation manual that outlines the criteria for determining whether a particular area is a wetland,\(^{54}\) and the Corps, in conjunction with the EPA, has issued guidance for establishing wetlands mitigation banks and for the use of in-lieu fees for mitigating wetlands losses.\(^{55}\) The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service have issued manuals providing guidance on how the agencies will engage in section 7 consultations under the Endangered Species Act (ESA) and process permits under section 10 of that statute.\(^{56}\) Similarly, the USFWS and agencies within the Department of the Interior (DOI) use manuals and other guidance documents for managing federal lands.\(^{57}\)

The public benefits from such information, by being alerted to an agency’s practice or current views.\(^{58}\) After all, the original justification for such documents was to “advise the public prospectively of the manner in which the agency proposes to exercise a discretionary power.”\(^{59}\) And the effect of advising the public prospectively of an agency’s views through a guidance document is similar to that of a rulemaking; it avoids the idiosyncratic and less

predictable approach of agency policy making through a case-by-case adjudication.\textsuperscript{60}

II. MODERN ADMINISTRATIVE LAW AND AGENCY GUIDANCE DOCUMENTS

An agency may revisit an earlier interpretation or guidance document for several reasons. A guidance document may have been premised upon an interpretation of the law that has since been undermined by a subsequent court decision. New congressional acts may alter an agency’s approach toward a particular program.\textsuperscript{61} Or, the agency simply might have gathered new information warranting a revision of earlier guidance. Even more importantly for our purposes, a new administration might arrive in Washington, D.C., with an entirely different agenda and approach toward implementing a host of programs.

Yet, how easy is it for an agency to issue or modify policy and guidance documents when, for instance, the reason is merely a change in policy direction by a new administration? The reality is that, today, the freedom agencies enjoy to issue or modify policy and interpretive guidance is uncertain.

Just how much flexibility future administrations will possess when implementing new policies and, if need be, to diverge from a prior statutory or regulatory interpretation contained in a guidance document, is likely to depend upon the convergence of several administrative law principles. These principles include: first, the factors courts employ when assessing whether a particular interpretive or other document is “final” or—even if final—“ripe” for purposes of judicial review; second, is how courts will identify whether a particular agency action constitutes a “legislative” or a “non-legislative” rule, with the former being subject to the notice-and-comment regulatory requirements; third, is the question of whether a private party can force adherence to a document; and, finally, there is the need to resolve the appropriate level of deference that courts will afford agency interpretations contained in documents developed other than through an APA-type notice-and-comment proceeding.

A. When Is a Guidance Document a Legislative Rule that Is Final and Ripe for Judicial Review?

The effort to distinguish between “legislative rules” and other documents that do not require an opportunity for notice-and-comment rulemaking has

---

\textsuperscript{60} See FRIENDLY, ADMINISTRATIVE AGENCIES, supra note 11, at 145 (urging greater use of policy documents and rulemakings in lieu of case-by-case adjudications).

\textsuperscript{61} In February 2008, for instance, the National Park Service rescinded a cruise ship management policy for Glacier Bay, Alaska—a policy which had been issued in 1990—because of its alleged incompatibility with a law that Congress passed in 1998. Rescind 1990 Cruise Ship Management Policy, Glacier Bay National Park \& Preserve, Alaska, 73 Fed. Reg. 6736 (Feb. 5, 2008).
plagued the field of administrative law for too long.62 Legions of articles address one aspect or another of the problem.63 Different courts imbue the analysis with their own spin. The Federal Circuit, for example, articulates the test simply as whether the agency has changed existing law or policy, or created new rights or obligations.64 The Ninth Circuit, in one case, focused on

62. See, e.g., Airport Comm'n of Forsyth County, North Carolina v. Civil Aeronautics Bd., 300 F.2d 185 (4th Cir. 1962). The lack of clear standards for distinguishing policy statements from legislative rules is not new. The Final Report of the Attorney General's Committee on Administrative Procedure, directed by Walter Gellhorn, recognized the distinction between interpretative rules and those that would be "legally binding." The latter "receive statutory force upon going into effect," while the former, the report continues,

do not receive statutory force and their validity is subject to challenge in any court proceeding in which their application may be in question. . . .

This distinction between statutory regulations and interpretative regulations is, however, blurred by the fact that the courts pay great deference to the interpretive regulations of administrative agencies, especially where these have been followed for a long time. . . . Consequently the procedures by which these regulations are prescribed become important to private interests. . . .

64. "[S]ubstantive rules" [are] those that effect a change in existing law or policy or which affect individual rights and obligations. "Interpretive rules," on the other hand, clarify or explain existing law or regulation and are exempt from notice and comment under section 553(b)(A). . . . "[A]n interpretive statement simply indicates an agency's reading of a statute or a rule. It does not intend to create new rights or duties, but only reminds affected parties of existing duties."

Splane v. West, 216 F.3d 1058, 1063 (Fed. Cir. 2000) (quoting Paralyzed Veterans of Am. v. West, 138 F.3d 1434, 1436 (Fed. Cir. 1998), quoting Orengo Caraballo v. Reich, 11 F.3d 186, 195 (D.C. Cir. 1993)). In Splane, the court concluded that a general counsel opinion was "interpretive" and therefore not subject to a notice and comment process. Id. at 1070. Conversely, in Coalition for Common Sense in Government Procurement v. Secretary of Veterans Affairs, the Federal Circuit held that a "Dear Manufacturer" letter, requiring that manufacturers refund the difference between a drug's wholesale commercial price and the associated federal ceiling price, was a substantive rule ripe for judicial review. 464 F.3d 1306, 1317–18 (Fed. Cir. 2006). The court reasoned that the "letter is substantive in nature because it changes existing law and affects individual obligations." Id. at 1317.
whether a particular agency document or interpretation was duly promulgated as if it were a rule, and as such would have the force and effect of law. 65

Quite frequently, courts deftly avoid the quagmire of having to distinguish between "legislative rules" and other documents that do not require an opportunity for notice-and-comment rulemaking by concluding that either there is no final agency action or the matter is not ripe for review. 66 For instance, the Tenth Circuit, in Public Service Co. of Colorado v. EPA, concluded that two EPA opinion letters were not final and subject to judicial review, because the impact of the letters was neither direct nor immediate. 67 The opinion letters described EPA's opinion on what type of CAA permit would be required for the construction of a new power plant that would be integrated with and constructed near an existing plant. 68 The letters concluded that the two facilities would constitute a single source, and as such be treated as a major modification requiring a Prevention of Significant Deterioration permit. 69 In reaching its conclusion, the court focused on four factors: (1) EPA was not the actual permitting agency, but the state agency would determine what type of permit would be required; (2) the opinions did not mark the consummation of the agency's decision-making process, which could not occur until action on any permit application; (3) there would be several layers of review before any EPA action; and (4) the opinions did not determine any rights or obligations, nor would any legal consequences flow (directly) from the opinions. 70 Similarly, in San Diego v. Whitman, the Ninth Circuit held that EPA's letter to the City of San Diego, regarding the applicability of the Ocean Pollution Reduction Act of 1994 to the City's wastewater treatment plant, was not a final agency action subject to judicial review. 71 The court reasoned that the letter neither marked

the consummation of the agency's decision-making process nor imposed any immediate legal obligation on the City.\textsuperscript{72} And a district court refused to allow a challenge to a guidance document explaining an agency's position on the scope of its jurisdiction under section 404 of the CWA in light of a new court decision.\textsuperscript{73} The court reasoned that the document was not "final" agency action.\textsuperscript{74}

\textbf{B. The D.C. Circuit Signals Concerns with Agency Guidance Documents}

The D.C. Circuit has struggled mightily—but arguably unsuccessfully—to address the dynamics of modern administrative law and what would appear to be an increasing number of issues presented by guidance documents. Several years ago, in order to determine whether an agency action constituted a policy statement or required following the notice-and-comment requirements of informal rulemaking, the D.C. Circuit employed an effects analysis test, examining several factors whose importance has shifted over time.\textsuperscript{75} The court at one time emphasized that the principal inquiry should be whether the challenged statements were published in the Code of Federal Regulations—if not, then they were only policy statements.\textsuperscript{76} But such a simple approach no

\textsuperscript{72} Id. at 1101.  
\textsuperscript{75} See Molycorp, Inc. v. EPA, 197 F.3d 543 (D.C. Cir. 1999); Louisiana Envtl. Action Network v. EPA, 172 F.3d 65 (D.C. Cir. 1999) (discussing preamble language). Those factors are: (1) the agency's own characterization of its actions; (2) whether the document was published in the Federal Register or the Code of Federal Regulations; and (3) whether the action has a binding effect on private parties or the agency. \textit{Louisiana Envtl. Action Network}, 172 F.3d at 69; \textit{see also} Florida Power & Light Co. v. EPA, 145 F.3d 1414, 1418 (D.C. Cir. 1998) (dismissing petition for review of statements in a preamble to a proposed rule, concluding that no "final regulations" had been issued and the case was not yet ripe); Am. Portland Cement Alliance v. EPA, 101 F.3d 772, 776 (D.C. Cir. 1996); Gen. Motors Corp. v. Ruckelshaus, 742 F.2d 1561 (D.C. Cir. 1984) (\textit{en banc}). One court described the D.C. Circuit's test as a two-part inquiry for determining whether an agency action is a policy statement or a document that should have been issued as a substantive rule: "[p]olicy statements (1) must not impose any new rights or obligations, and (2) must 'genuinely leave the agency and its decision-makers free to exercise discretion' and in weighing these criteria "the ultimate issue is the agency's intent to be bound." Alliance for Bio-Integrity v. Shalala, 116 F. Supp.2d 166, 172 (D.D.C. 2000) (citations omitted). The D.C. Circuit early on applied a legal effects test. Gibson Wine Co. v. Snyder, 194 F.2d 329, 331 (D.C. Cir. 1952).  
\textsuperscript{76} See Florida Power & Light Co. v. EPA, 145 F.3d 1414, 1418 (D.C. Cir. 1998); Am. Portland Cement Alliance v. EPA, 101 F.3d 772, 776 (D.C. Cir. 1996). In \textit{Pacific Gas & Electric v. Federal Power Commission}, the court indicated that documents not promulgated in accordance with the appropriate procedures generally are not substantive, enforceable rules. 506 F.2d 33 (D.C. Cir. 1974). Rather, such documents announce the "agency's tentative intentions for the future. When the agency applies the policy in a particular situation, it must be prepared to support the policy just as if the policy statement had never been issued." Id. at 38.
longer governs. In *Alaska Professional Hunters Ass’n, Inc. v. FAA*, for instance, the D.C. Circuit focused on whether the agency changed a prior definitive interpretation of its regulations, and if so the court would require that the agency proceed through a notice-and-comment process.77 Justice Breyer, writing for the entire Supreme Court in *Long Island Care at Home, Ltd. v. Coke*, appears to endorse this view.78

Since 2000, the D.C. Circuit’s decisions have become less predictable. In 2000, the court sent a strong message to agencies that increased reliance on guidance documents might prove problematic. It delivered this message in *Appalachian Power Co. v. EPA*, where the court held that it could review and vacate a CAA guidance document, because the agency had failed to follow APA notice-and-comment rulemaking.79 One commentator at the time predicted that life after *Appalachian Power* could prove interesting, as the court suggested that a host of EPA guidance documents might succumb to the same fate.80

*Appalachian Power* involved EPA’s issuance of one of many guidance documents necessary to help inform the administration of the CAA. In 1992, EPA issued regulations requiring that certain air permits contain requirements for “periodic monitoring” of emissions.81 The regulations left a number of issues unresolved and created uncertainty about the insertion of periodic monitoring requirements in CAA permits. Released in 1998, EPA’s “Periodic Monitoring Guidance” (PMG) document sought to address the ambiguities in

---

To the extent that a change in a prior interpretation of a regulation is accomplished outside the APA rulemaking process, the doctrine of “fair notice” may apply. *See United States v. Chrysler Corp.*, 158 F.3d 1350, 1356 (D.C. Cir. 1998) (“an agency is hard pressed to show fair notice when the agency itself has taken action in the past that conflicts with its current interpretation of a regulation.”); *Satellite Broadcasting Co., Inc. v. Fed. Commc’n’s Comm’n*, 824 F.2d 1, 3 (D.C. Cir. 1987) (“Traditional concepts of due process incorporated into administrative law preclude an agency from penalizing a private party for violating a rule without first providing adequate notice of the substance of the rule.”). This doctrine, however, arguably should have currency only when an interested party has legitimate due process protections.

78. 127 S. Ct. 2339, 2349 (2007) (“But as long as interpretive changes create no unfair surprise—and the Department’s recourse to notice-and-comment rulemakings in an attempt to codify its new interpretation... makes any such surprise unlikely here—the change in interpretation alone presents no separate ground for disregarding” it).

79. 208 F.3d 1015, 1028 (D.C. Cir. 2000).

81. *Appalachian Power*, 208 F.3d at 1017, 1025.
the 1992 regulations. Petitioners argued that EPA had impermissibly attempted to prescribe substantive rules through the guise of a guidance document, which had not been adopted in accordance with notice-and-comment rulemaking. EPA responded by objecting to any challenge, claiming that the court lacked jurisdiction to hear the case because the guidance document was not a final rule.

Early in the opinion, Judge Randolph foreshadowed the tenor of the court's decision. Before discussing the merits, he observed:

The phenomenon we see in this case is familiar. Congress passes a broadly worded statute. The agency follows with regulations containing broad language, open-ended phrases, ambiguous standards and the like. Then as years pass, the agency issues circulars or guidance or memoranda, explaining, interpreting, defining and often expanding the commands in the regulations. One guidance document may yield another and then another and so on. Several words in a regulation may spawn hundreds of pages of text as the agency offers more and more detail regarding what its regulations demand of regulated entities. Law is made, without notice and comment, without public participation, and without publication in the Federal Register or the Code of Federal Regulations.

With that, it is not surprising that the court then held that it could review the document under CAA's procedures for allowing judicial review of "nationally applicable," "final action[s]" by the EPA. The court dismissed EPA's contention that the document was not final because it was not binding. It explained how documents such as the PMG could be binding in a practical sense and rejected EPA's suggestion to the contrary, noting that the challenged part of the guidance document consisted of the agency's settled position—one that would need to be followed in future circumstances.

But the court added that merely because something may be binding does not necessarily mean it is final. The court identified two elements for finality: first, the action "must mark the consummation of the agency's decision-making process," and second, it must be one that determines "rights or obligations" from "which legal consequences will flow." It found both elements present.

82. Id. at 1019.
83. Id. at 1023–1024.
84. Id. at 1020. EPA further raised ripeness as an issue, but the court summarily rejected the argument. Id. at 1023 n.18.
85. Id. at 1020.
86. Id. at 1021 n.10.
88. Id. at 1021–22.
89. If the "binding" nature of the action is not necessarily sufficient for finality, the court curiously added that an agency action could be final without being "binding." Id. at 1022 n.15. Of course, this might suggest that the court unnecessarily engaged in an analysis of the "binding" nature of the PMG to determine its jurisdiction.
90. Id. at 1022.
The document was not a draft and it contained mandatory commands. In rejecting boilerplate language in the document that it was not final and could not be relied upon to create any enforceable rights, the court noted that the "entire Guidance, from beginning to end—except the last paragraph—reads like a ukase. It commands, it requires, it orders, it dictates."

Having established its jurisdiction, the court then examined whether the PMG altered EPA's existing periodic monitoring rule or reflected a valid interpretation of the existing rule. Believing that the guidance document "significantly broadened" EPA's existing regulation, the court set aside the document as impermissible rulemaking contrary to the rulemaking requirements under the statute. Conspicuously absent from any part of this opinion is any discussion about deference to EPA's interpretation of its existing regulation.

The court's entire reasoning masks some fundamental flaws. The court built its house of cards by manipulating what is meant by "binding." It rejected a simple test that would rely upon whether the document was promulgated or should have been promulgated in accordance with the procedures laid down in the particular statute or the APA. It similarly rejected as unhelpful any test that would depend upon whether the document is characterized by the agency as a rule—because policy statements and interpretative rules may be "rules," although neither require notice-and-comment rulemaking. Rather, the court focused almost exclusively on whether the PMG was "binding" in a practical sense, concluding that it was—it represented a settled position which had "legal consequences."

The court further suggested that, regardless of whether a document is "binding," it might nonetheless constitute final agency action if it marks the end of a decision-making process and, not surprisingly, has legal consequences. Yet, the analysis underlying both these inquiries effectively employs a "practical effect" test for determining whether to assign "legal consequences" to a particular document. And the apparent justification for why the document had a practical effect is that the court merely believed that states must follow the PMG. But the application of a practical effect inquiry overlooks the fact that the court was reviewing an abstract challenge to the

98. See, e.g., id. at 1022 ("State agencies must do so"); id. at 1023 ("[T]he entire Guidance, from beginning to end—except the last paragraph—reads like a ukase. It commands, it requires, it orders, it dictates.").
document, and the record contained absolutely no information on (a) the practical effect; (b) whether it marked the consummation of an agency process; or (c) the legal consequences of not complying with the guidance in any particular case.

A couple decisions succeeding Appalachian Power suggested that the D.C. Circuit might begin to restrict an agency’s ability to employ guidance documents in lieu of going through notice-and-comment rulemaking. In Barrick Goldstrike Mines, the court held that EPA’s “Metal Mining Facilities” guidance was a final agency action subject to judicial review.99 There, the Barrick gold mining company argued that EPA impermissibly extended the toxic release inventory program to mining activities without following rulemaking requirements.100 Both EPA’s rulemaking preamble and its guidance document interpreted the rule to apply to mining activities.101 Siding with the mining company, the court appears to have been influenced by EPA’s oral argument, where the agency conceded that its position was “final,” and that, if Barrick failed to follow EPA’s guidance, it would be subject to an enforcement action.102 As such, the agency’s purported guidance appeared binding and thus subject to judicial review.103

In CropLife America v. EPA, the court similarly reviewed and then invalidated an EPA guidance document.104 For many years, EPA had relied on data from human studies when making its regulatory decisions for approving pesticides under the Federal Food, Drug and Cosmetic Act and the Federal Insecticide, Fungicide and Rodenticide Act, but during 1998 it began to consider such data only on a case-by-case basis.105 Then, in late 2001, EPA issued a press release with an accompanying directive, announcing that it would no longer allow the use of such data, pending review by the National Academy of Sciences of the ethical issues associated with using third-party human studies.106 The CropLife court had “little trouble” concluding that the directive was “indeed a binding regulation.”107 The court reasoned that it was

100. “The company alleges that in applying the program [Emergency Planning and Community-Right-to-Know Act, 42 U.S.C. § 11023] to mining, EPA in fact revised the program; that its revision were substantive; that they were not made through rulemaking, as they should have been; and that the revisions were made instead through statements in ‘rulemaking preambles’ and in detailed directives issued in the form of ‘guidance’ and a letter.” Id. at 47.

107. Id. at 881.
“aimed at and enforceable against the petitioners,” and reflected “an obvious change in established agency practice.”

When issued, Appalachian, Barrick and CropLife appeared troubling. They seemingly ignored, and possibly perpetuated, the long-standing confusion between interpretive and legislative rules, as well as obfuscated the need to ensure that an agency action is both “final” and “ripe” for judicial review. In Appalachian Power, the court purportedly followed this prescription, but effectively created a tautology: it concluded that the rule was tantamount to a legislative rule and, as such, “binding.” Because it was binding, there would be legal consequences, and therefore it was subject to judicial review under the CAA.

C. The D.C. Circuit Softens Stance on Guidance Documents

Since Appalachian Power, agencies have become increasingly savvy in their drafting of documents, and the D.C. Circuit has been less inclined to criticize their use. Three good examples are Wilderness Society v. Norton, Center for Auto Safety v. National Highway Traffic Safety Administration, and Cement Kiln Recycling Coalition v. EPA. The first case, Wilderness Society, involved the National Park Service’s (NPS) 2001 Management Policies

108. Id. The directive was binding because parties could no longer rely upon human studies. Id. at 883. Nor could it be classified as a policy statement; the court identified two tests that it had applied in the past for distinguishing policies from legislative rules: one test whose analysis focuses on the “effects” of the agency action, and another whose analysis focuses on the “agency’s expressed intentions.” Id. Both tests, the court added, nevertheless converge when examining whether the challenged action is binding on the agency or private parties. Id.

110. The Clean Air Act authorizes the D.C. Circuit to hear appeals from certain “rules” and “final action[s] taken.” 42 U.S.C. § 7607(b) (2006). The Appalachian Power court noted that it did not have to resolve two conflicting lines of cases interpreting whether a policy statement is a “rule,” 208 F.3d at 1021 n.13, ostensibly because it concluded that the policy guidance was a “final action taken.” The court reasoned that a final action is one that marks the “consummation” of the agency’s decision-making process and “by which ‘rights or obligations have been determined,’ for from which ‘legal consequences will flow’ . . . .” Id. at 1022. The PMG satisfied these criteria, according to the court, because the decision-making process on the PMG had concluded and the PMG appeared to be binding—that is, it constituted a rule. Id. Elsewhere in its opinion, while the court notes that the case has been presented “in pure abstraction,” it nonetheless rejects the notion that the case is not ripe, concluding that nothing could impact the outcome. Id. at 1024 The court further adds that a challenge to a particular permit might escape review by the D.C. Circuit, the court entrusted with reviewing the validity of EPA’s action under the CAA. Id. at 1023 n.18.

111. 434 F.3d 584 (D.C. Cir. 2006).

112. 452 F.3d 798 (D.C. Cir. 2006).

113. 493 F.3d 207 (D.C. Cir. 2007). The court’s analysis mirrored its earlier opinions in General Motors Corp. v. EPA, 363 F.3d 442 (D.C. Cir. 2004), and Independent Equipment Dealers Ass’n v. EPA, 372 F.3d 420 (D.C. Cir. 2004). In General Motors, EPA issued a letter addressing whether certain solvents were solid wastes, under RCRA. 363 F.2d at 445. Although the letter reiterated an earlier interpretation by the agency, the petitioner nevertheless sought judicial review pursuant to RCRA’s judicial review provision. Id. at 447. The court held that the letter was not a final regulation reviewable under the statute. Id. at 453.
Concerned that the NPS was not identifying and managing wilderness areas in a manner required by statute and the agency's Management Policies, the Wilderness Society sued the NPS. Part of its argument was that the NPS had failed to develop management plans for certain parks, as required by the policies. NPS responded by arguing that the Management Policies were not rules enforceable against the agency, but rather provide only internal guidance. The court agreed, rejecting the argument that the Management Policies were binding. The court identified two approaches for determining whether an agency's action constitutes a binding norm: (1) the effects of the agency action; and (2) the agency's expressed intentions. Oddly, this second approach not only includes the agency's characterization of its action, but also whether the agency published the policy in the Federal Register or the CFRs and whether it has binding effects on either the agency or private parties. Even though the document contained directives reminiscent of the words highlighted in Appalachian Power, the court nevertheless concluded that it was a non-binding guidance document. Several reasons apparently animated its conclusion. To begin with, the Management Policies contained only broad directives. Next, although noticed in the Federal Register, they were not published through notice-and-comment rulemaking. The court observed that the failure to publish a document as if it was a rule is particularly noteworthy, as "the real dividing point between regulations and general statements of policy is publication in the Code of Federal Regulations." This language potentially signals an important shift toward focusing on procedure as a surrogate for line-drawing. The court also found the agency's characterization of the document as simply a set of internal guidelines for the agency, which could be ignored if so instructed by a political appointee, as "telling." And, almost sub silentio, the court abandoned the concern it expressed with guidance documents in Appalachian Power, when it concluded that any other result "would chill efforts by top agency officials to gain control over their bureaucratic charges through internal directives."

The next case, Center for Auto Safety, allowed the agency to use informal letters to alert the regulated community of a change in agency policy. Since

the mid-1980s, the National Highway Traffic and Safety Administration (NHTSA) had allowed auto manufacturers to voluntarily recall defective or non-complying cars in particular regions of the country when the manufacturer determined that the need for the recall was occasioned by climate conditions only affecting cars in that particular region.128 In 1997 and 1998, NHTSA sent letters to the major manufacturers outlining concerns with this past practice, and establishing detailed guidelines that might allow companies to distinguish between locales when conducting recalls.129 Several years later, the Center for Auto Safety complained to NHTSA about the agency’s approach toward allowing regional recalls and, after about two years of engaging in a correspondence campaign with NHTSA, challenged NHTSA’s letters as legislative rules that should have been issued with the opportunity for notice and comment.130 On appeal from a dismissal by the district court, the D.C. Circuit affirmed.131

The court began its inquiry by asking whether the letters constituted either “final agency action” under the APA or a “de facto rule or binding norm” that required compliance with the APA’s rulemaking procedures.132 But then it said, curiously, that these two inquiries are essentially the same. Although noting that it is “not always easy to distinguish”133 between unreviewable agency actions and those that establish binding norms, the court articulated the following principles guiding the inquiry:

“In determining whether an agency has issued a binding norm or merely an unreviewable “statement of policy, we are guided by two lines of inquiry.” One line of analysis considers the effects of an agency’s action, inquiring whether the agency has “(1) impose[d] any rights and obligations, or (2) genuinely [left] the agency and its decisionmakers free to exercise discretion.” . . . The language used by an agency is an important consideration in such determinations. The second line of analysis looks to the agency’s expressed intentions.

This entails a consideration of three factors: “(1) the [a]gency’s own characterization of the action; (2) whether the action was published in the Federal Register or the Code of Federal Regulations; and (3) whether the action has binding effects on private parties or on the agency.”134

Applying these principles, the court concluded that NTHSA’s letters were neither final agency action nor binding rules. Instead, the letters merely reflected the agency’s view of its statutory obligations—and as such are

“nothing more than a privileged viewpoint in the legal debate.”\textsuperscript{135} They were not published in the CFR, and they only purported to be guidelines and read as such.\textsuperscript{136} Moreover, the author of the letters lacked the statutory authority to issue any binding regulations or make any final determinations regarding regional recalls.\textsuperscript{137} This all distinguished this case from Appalachian Power Co., where the document there “read like a ‘ukase.’”\textsuperscript{138} The court ended its analysis by rejecting the argument that the guidelines had practical if not legal consequences.\textsuperscript{139} The court reasoned that whether that was true or not overlooked the Supreme Court’s language in Bennett v. Spear, requiring “legal consequences” before an agency action could be deemed final.\textsuperscript{140}

In the third case, Cement Kiln Recycling Association, the D.C. Circuit ostensibly softened its criticism of agency practice announced in Appalachian Power.\textsuperscript{141} EPA released a guidance document for conducting site-specific risk assessments at facilities that burn hazardous waste as fuel for their operations.\textsuperscript{142} Such assessments were deemed necessary to provide permitting authorities with sufficient information to impose conditions on the operation of facilities to protect human health and the environment.\textsuperscript{143} The rule did not include any specific requirements for assessments, but rather provided a list of factors to use when conducting any specific inquiry.\textsuperscript{144} As part of its challenge to the rule and guidance document, the Cement Kiln Recycling Coalition claimed that the guidance document constituted a de facto rule not issued through notice-and-comment rulemaking.\textsuperscript{145} EPA primarily sought to persuade the court that neither the rule nor the guidance document was ripe for review—

\textsuperscript{135} Id. at 808. The court analogized to AT&T Co. v. EEOC, 270 F.3d 973 (D.C. Cir. 2001), involving a challenge to an agency’s legal interpretation of a company’s obligation under the Pregnancy Discrimination Act of 1979. See id. In AT&T, the agency’s compliance manual provided an interpretation of the Act (which adopted a Ninth Circuit’s interpretation of the Act in lieu of a contrary interpretation by the Seventh Circuit). AT&T, 270 F.3d at 974. Pursuant to a request by AT&T, the agency provided a letter of determination on the applicability of the Act to AT&T, reaffirming its adherence to the interpretation in the manual—and thus to the Ninth Circuit’s interpretation. Id. AT&T sought a declaratory judgment, although admitting that the letter itself was not a final agency action. Id. at 975. The court rejected AT&T’s suggestion that the principles of Appalachian Power Co. ought to apply, reasoning that neither the manual nor the letters inflicted any injury upon AT&T and the manual and letter would only be relevant in any subsequent action by the agency to the extent a court might find the analysis persuasive. Id. at 976. Cf. City of Dania Beach v. FAA, 485 F.3d 1181 (D.C. Cir. 2007) (FAA letter authorizing activity contained a new interpretation and, as such, held to be a reviewable final agency order).

an odd strategy because the rule undoubtedly was ripe for review and RCRA mandated that petitions for review from rulemakings be filed within ninety days of the date of promulgation. Only at the end of its brief, did EPA respond to the merits of the challenge, noting that the guidance was not intended to be binding, it was not published in either the Federal Register or the CFR, and no language in the document said it was binding.

After dispatching the claim that the case was not ripe, the court provided comfort to agencies that it would no longer engage in any speculation about the ultimate binding nature of guidance documents. The court observed that whether something is a “legislative rule” or not depends upon whether the agency intends it to be binding and whether it is, in effect, binding. The court applied its pre-Appalachian Power three part test from Molycorp, Inc. v. EPA, which examines (1) the agency’s characterization of the document; (2) whether the document was published in the Federal Register or CFR; and (3) whether the document is binding on the agency or private parties. It arguably downplayed the second inquiry, noting that its method of publication merely illuminates whether the document has the force of law. But that factor, coupled with the agency’s insistence that it was not binding and the lack of any language in the document suggesting that it was binding, led the court to conclude that it was not a de facto rule on its face. And, perhaps most importantly, in response to the Coalition’s claim that EPA had deliberately added caveats to the document in response to the decision in Appalachian Power Co., the court observed that “[w]e can hardly fault EPA for responding to an opinion of this court. There is nothing improper about an agency changing its language in light of our decisions . . .”

The unpredictable nature of the tests developed by the D.C. Circuit, and possibly that court’s emerging reticence toward treating an agency’s action as a de facto rulemaking, is perhaps best illustrated in Ass’n of Irritated Residents v. EPA. Community and local environmental groups were concerned about emissions from animal feeding operations (AFOs), where livestock is raised for

147. Id.
148. Because the D.C. Circuit exercised jurisdiction only over rulemakings, the court observed that it either lacked jurisdiction or the guidance document constituted a rulemaking and, if so, had to be vacated for lack of compliance with notice-and-comment requirements. consumption.\textsuperscript{156} AFOs release several pollutants, including ammonia, nitrous oxide and methane, during the normal course of their operations, and sometimes in sufficient quantities to require that the facilities either report the emissions or submit to regulation. If released in sufficient quantities, these pollutants can pose significant public health concerns for nearby residents.\textsuperscript{157} However, the fugitive nature of the emissions, coupled with the difficulty of establishing any monitoring system, tempered EPA's effort to enforce these environmental laws against the agricultural community.\textsuperscript{158} A coalescence of interests ultimately led EPA to offer individual AFOs the ability to sign a generic form of a consent agreement, which would require the payment of a specified penalty and commit the AFO to a course of monitoring and resolve any potential or outstanding claims of violations of the CAA, CERCLA or the Emergency Planning and Community-Right-to-Know Act (EPCRA).\textsuperscript{159}

Petitioners challenged EPA's actions, including the three Federal Register Notices announcing the offer for the consent agreements and then eight separate orders approving various consent agreements.\textsuperscript{160} Their primary argument tried to persuade the court that the three Federal Register notices

\textsuperscript{156} Id. at 1028. An AFO is a lot or facility where certain animals are confined and fed for at least 45 days a year and where "crops, vegetation, forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility." Concentrated Animal Feeding Operations, 40 C.F.R. § 122.23(b)(1) (2007).

\textsuperscript{158} The National Research Council's report observes that "[e]stimating emissions of gases, PM, and other substances from AFOs is technically difficult." Id. at 11.

\textsuperscript{160} Petitioners' Opening Brief at 25, Ass'n of Irritated Residents v. EPA, 494 F.3d 1027 (D.C. Cir. 2007) (No. 05-1177) (2006 WL 3622127).
collectively constituted "a legislative rule disguised as an enforcement action." 161 Like any other legislative rule, they claimed, it operated prospectively and prescribed obligations, and it further constrained the agency's enforcement discretion—all without following the requirements for a rulemaking or affording the public a meaningful opportunity to comment. 162 They supplemented this argument by further asserting that EPA violated the CAA, CERCLA, ECPRA and the agency's own regulations regarding enforcement actions, because neither the statutes nor regulations allowed any exemption for agricultural sources, and to be a valid enforcement action, EPA was required to allege individual facts that would establish violations of specific requirements. 163 They believed that the D.C. Circuit could exercise jurisdiction under both the CAA and CERCLA provisions, which provide, respectively, for direct review of regulations or final actions and direct review of any regulation. 164

The government raised several jurisdictional issues, including that the Federal Register notices were not reviewable final agency actions and that the orders constituted unreviewable enforcement decisions. 165 The Federal Register notices, according to EPA, were neither final agency actions nor rulemakings over which the court could exercise jurisdiction. 166 The agency argued that final agency action could occur only when a consent agreement has been approved. 167 EPA further posited that the consent agreements were part of an enforcement proceeding and, under Heckler v. Chaney, not judicially reviewable. 168

167. Id.
168. EPA asserted that "the agency action must create new rights or obligations that govern future behavior. The consent agreements do not create any new rights or obligations but resolve the respondents' liability for potential violations of existing conditions." Id. at 37. EPA dismissed petitioners' two principal cases, National Ass'n of Homebuilders v. U.S. Army Corps of Engineers, 417 F.3d 1272 (D.C. Cir. 2005), and Croplife America v. EPA, 329 F.3d 876 (D.C. Cir. 2003), arguing that the challenged agency action in the former case involved the creation of a future specific right, while the latter involved a binding change in agency policy. Id. at 37–38. EPA also argued that the consent agreements did not limit EPA's discretion; rather, the agreements reflected EPA's exercise of enforcement discretion and the agency retained its power to proceed against any AFO not signing an agreement or violating any agreement. EPA distinguished Community Nutrition Institute v. Young, 818 F.2d 943 (D.C. Cir. 1987), emphasizing that in Young, the agency had constrained its enforcement discretion—quite different than the Federal Register notices here. Id. at 40–41. EPA further
The D.C. Circuit panel, with Judge Rogers dissenting, rejected the claim that EPA's consent agreement program was judicially reviewable or required rulemaking procedures. Writing for the court, Judge Sentelle began by determining whether the case involved an "enforcement" decision or a rulemaking. He wrote that "[o]ur analysis of this case begins and ends with . . . whether the Agreement constitutes a rulemaking subject to APA review, or an enforcement proceeding initiated at the agency's discretion and not reviewable by this court." If the Agreement constituted an enforcement proceeding, then Heckler v. Chaney would suggest that the court lacked jurisdiction to review such actions. Conversely, if this was not an enforcement action, then EPA would have been required to proceed through notice-and-comment rulemaking. Judge Sentelle resolved this inquiry by concluding that precedent easily placed the case as one involving non-reviewable discretionary enforcement decisions.

First, he noted that the court already had applied Chaney to an instance where the agency had initiated and settled an enforcement action, and that the facts involved here fell squarely within the court precedents. Reasoning that EPA had opted for a "broader strategy" in lieu of individual enforcement actions, he observed:

169. Ass'n of Irritated Residents v. EPA, 494 F.3d 1027, 1033, 1037 (D.C. Cir. 2007).
170. Id. at 1030.
172. Id. at 1032-33.
173. Id. at 1031. The prior case, Schering Corp. v. Heckler, 779 F.2d 683 (D.C. Cir. 1985), involved a lawsuit brought by a drug manufacturer against the Food and Drug Administration (FDA), alleging that the FDA had improperly settled an enforcement proceeding against a rival drug manufacturer. The settlement there succeeded two district court actions involving the question of whether the drug manufacturer was selling a "new animal drug" without first having received FDA approval and the legal issue of whether genetically identical drugs fell within the FDA's statute—an issue left open in a 1983 Supreme Court decision. See United States v. Generix Drug. Corp., 460 U.S. 453 (1983). The Schering settlement agreement required that the drug manufacturer submit a petition to the agency, requesting that the agency determine whether to classify the drug as a new animal drug under the statute. 779 F.2d at 685. About a month after that petition had been filed with the FDA, the competing drug manufacturer filed an action in district court challenging the settlement agreement. Id. The district court dismissed the case, reasoning that the "agency has merely postponed any decision with regard to enforcement until it has had an opportunity to determine" whether drug is subject to FDA's approval, the D.C. Circuit concluded that the case fell "squarely within the confines of Chaney.

174. Ass'n of Irritated Residents, 494 F.3d at 1031.
175. Id.
The Agreement is intended to save the time and cost of litigation while providing the agency with an opportunity to determine whether, and to what extent, AFOs are subject to the statutory requirements. These considerations, he concluded, fell within EPA’s “expertise and discretion.”

Second, Judge Sentelle examined whether the relevant statutes themselves afforded EPA discretion. Parsing the language of the CAA, CERCLA and EPCRA, which all couch the agency’s enforcement authority in “permissive” terms, he reasoned that no statutory language “rebuts the Chaney presumption that the Agreement, as a civil enforcement decision, is committed to the discretion of the agency.”

Lastly, although having already ostensibly answered his initial question, Judge Sentelle addressed petitioners’ argument that the consent agreement was a “rule” under the APA. This aspect of the opinion asked whether the agency’s action, in the words of the APA, “prescribe[d] law.” It did not, he reasoned, because the agency’s action neither “work[ed any] change in the agency’s substantive interpretation or implementation of the Acts,” nor cabined the agency’s prosecutorial discretion to such a degree that it rose to the level of a substantive rule.

Judge Sentelle distinguished the two primary cases relied upon by petitioners, National Ass’n of Homebuilders v. U.S. Army Corps of Engineers and Croplife America v. EPA. While the Corps in

178. *Id.* at 1033.
179. *Id.* Petitioners argued that the compliance agreement was a rule under the APA, because it operated prospectively, prescribed obligations, and constrained EPA’s enforcement discretion. Petitioners’ Opening Brief at 25, Ass’n of Irritated Residents v. EPA, 494 F.3d 1027 (D.C. Cir. 2007) (No. 05-1177), 2006 WL 3622127. They further noted that EPA’s action constituted a rulemaking as it “seeks to resolve broad policy questions.” Petitioners’ Amended Reply Brief at 2, Ass’n of Irritated Residents v. EPA, 494 F.3d 1027 (D.C. Cir. 2007) (No. 05-1177), 2007 WL 917334. Indeed, petitioners expressed concern with the precedent that this case might establish and referred to what “[l]egal scholars have called this emerging trend by administrative agencies ‘regulation by litigation.’” *Id.* at 15 (citations omitted).

180. Ass’n of Irritated Residents v. EPA, 494 F.3d 1027, 1034 (D.C. Cir. 2007). He distinguished Community Nutrition Institute v. Young, 818 F.2d 943 (D.C. Cir. 1987) (per curiam), where the court held that the Food and Drug Administration’s “announcement of action levels that specified when merchants would be subject to enforcement proceedings under the statute constituted a rule.” *Id.*

181. 417 F.3d 1272 (D.C. Cir. 2005). Homebuilders involved a challenge to the U.S. Army Corps’ issuance of certain nationwide permits, allowing qualified parties to avoid having to submit an individual permit application for regulated CWA section 404 activities. The court had little trouble concluding that the Corps’ action was both final and subject to review—the Corps was defining who could proceed through a less rigorous process in lieu of an individual permit. See *id.* at 1284. In response to the claim that it had not complied with the Regulatory Flexibility Act, the Corps argued that its action, even if final, did not constitute a rulemaking, but instead operated as an adjudication. *Id.* The Homebuilders court held otherwise, noting that “‘rules is rules,’ no matter their gloss” and each of the nationwide permits “is a legal prescription of general and prospective applicability which the Corps has issued to implement” its congressionally delegated permitting authority. *Id.* at 1284–85.

182. 329 F.3d 876 (D.C. Cir. 2003).
Homebuilders had effectively adopted a program prospectively authorizing activities that otherwise would have been illegal, Judge Sentelle concluded that this was not the case in Irritated Residents.183 He similarly distinguished Croplife, merely indicating that the court there was confronted with a binding agency document.184

Judge Judith Rogers issued a lengthy dissent. She rejected the suggestion that the case involved an enforcement scheme or that it was a matter committed solely to the agency’s discretion.185 According to Judge Rogers, the initial notice in the Federal Register had all the trappings of a legislative rule: it was of general applicability; it would have future effect; and it would define the rights and obligations of the regulated community regarding compliance with the three environmental laws, thus effectively cabining the agency’s enforcement authority.186 Contrary to the majority view, she believed the case was similar to Croplife: the protocol in Croplife created a binding norm no different than the protocol here—a general approach governing the agency’s responsibilities under the statutes toward this particular industry, and binding on both the agency and those who entered into the agreements (“most of the regulated AFO industry”).187 In short, “EPA adopted a new generalized approach toward enforcing three environmental statutes in the future by means of an enforcement protocol unrelated to particularized findings of past or ongoing statutory violations and untethered to the enforcement regimes established by Congress . . . .”188

Regardless of whether EPA lacked any choice but to proceed as it did with consent agreements, it seems reasonable to conclude that Judge Rogers’ opinion persuasively describes why EPA’s action constituted a rulemaking. To begin with, raising the shield of Heckler v. Chaney seems inapposite. Chaney is premised upon courts’ inability to intrude into an agency’s decisionmaking process on who or when to prosecute for violations of the law.189 The Chaney Court evinced concern with reviewing an agency’s decision to refrain from

183. Ass’n of Irritated Residents, 494 F.3d at 1033–34.
184. Id. Mindful of Chaney’s cautionary footnote 4, where the Court intimated that judicial review might be available if the agency has “‘consciously and expressly adopted a general policy that is so extreme as to amount to an abdication of its statutory responsibilities,’” Judge Sentelle also added that nothing here suggested that EPA had adopted a policy of not enforcing the acts. Id. at 1035–36 (citing Heckler v. Chaney, 470 U.S. 821, 833 n.4 (1984)). And he further rejected the argument that EPA lacked the authority under the relevant statutes to enter into the consent agreements. Id. at 1036–37.
185. Id. at 1037–46 (Rogers, J., dissenting).
186. Id. at 1039 (Rogers, J., dissenting).
187. Id.
188. Id. at 1040 (Rogers, J., dissenting).
189. Heckler v. Chaney, 470 U.S. 821, 831–33 (1984). Judge Sentelle, while focusing on footnote 4 of Chaney, avoided the Court’s accompanying language emphasizing that the Court was establishing only a presumption of un-reviewability that could be rebutted when the agency’s underlying statutory authority “provided guidelines for the agency to follow in exercising its enforcement powers.” Id. at 833.
initiating a proceeding against a particular party. After all, the Chaney Court reasoned, what meaningful standard could a court employ to assess whether an agency acted appropriately in not taking any enforcement action? Whether or not one agrees with the reasoning in Chaney, those concerns were not readily apparent in Irritated Residents. The Irritated Residents petitioners sought review of certain actions by EPA (not the inaction of refraining from undertaking an enforcement action). It is unquestionable that an EPA enforcement decision holding someone liable under the CAA, the CWA or other environmental statutes is judicially reviewable. The law to apply when EPA prosecutes under its statutes is the scope of authority Congress delegated to the agency to prosecute administratively, as well as whether the agency decision to prosecute in a particular manner is arbitrary or capricious. Even the last part of Judge Sentelle’s opinion ironically confirms this: there, he reviewed whether the consent agreements exceeded EPA’s authority under the Acts—an argument he nevertheless rejected. But it illustrates that if this were a properly adopted “rule,” a court could then examine whether it comported with the statutory mandates or if the agency otherwise acted arbitrarily or capriciously.

EPA’s actions in Ass’n of Irritated Residents, therefore, could easily be classified as constituting a final and reviewable agency rulemaking. Even Judge Sentelle’s framing of the question would suggest as much, when he reasoned that the case involved either a rulemaking or an unreviewable enforcement proceeding. But aside from Judge Sentelle’s binary choice, it seems hard to describe what EPA did as anything other than a rulemaking. EPA did not engage in any individualized review of the facts of any AFO or initiate any enforcement proceeding or adjudication—it instead issued a notice in the Federal Register for the industry at large. It adopted, according to Judge

190. The Chaney Court observed that, “[f]or us, this case turns on the important question of the extent to which determinations by the FDA not to exercise” enforcement authority is judicially reviewable. Id. at 828 (emphasis in original).

191. Chaney’s deviation from the presumption in favor of judicial review under the APA can only be justified if the decision is understood as reflecting the inherent difficulty of determining what law to apply when the agency has not taken any action. Courts at the time of Chaney had not yet struggled with how to address those instances where inaction would constitute “action” under the APA. Although he generally criticizes the weak reasoning of the Court in Chaney, Cass Sunstein notes that the Court avoided more knotty issues, such as the failure of an agency to undertake a rulemaking. Cass R. Sunstein, Reviewing Agency Inaction After Heckler v. Chaney, 52 U. Chi. L. Rev. 653, 675 (1985). See generally Eric Biber, Two Sides of the Same Coin: Judicial Review of Administrative Agency Action and Inaction, 26 VA. ENVTL L. J. 461 (2008); Eric Biber, The Importance of Resource Allocation in Administrative Law, 60 ADMIN. L. REV. 1 (2008).

192. Ass’n of Irritated Residents v. EPA, 494 F.3d 1027, 1036 (D.C. Cir. 2007).

193. See id. at 1030.

194. EPA admitted “[w]hile [it] has the authority on a case-by-case basis to require AFOs to monitor their emissions and to come into compliance with applicable Federal laws, that process has proven to be difficult and time consuming . . . .” Animal Feeding Operations Consent Agreement and Final Order, 70 Fed. Reg. 4958 (Jan. 31, 2005). The agency further suggested that it was not exercising enforcement authority when it added that it “believe[d] that the alternative to the Agreement suggested
Sentelle, a "broader strategy" or, in the words of the APA, a strategy that "prescribe[s] law or policy." While Judge Sentelle may have indicated that the policy does not prescribe "law," it surely prescribes the agency's policy of how it will approach compliance with the laws by the AFOs. In short, EPA's "Air Compliance Agreement" is in form no different than if it had been called an "Air Compliance Program." This type of prospective policy program, which establishes the rights and obligations of those who participate and sign the consent agreements, including EPA, is indistinguishable from a typical rulemaking. It even began in a manner similar to rulemakings, with a Federal Register notice. Any suggestion that a rulemaking proceeding would have been difficult seems specious.

III. ARE GUIDANCE DOCUMENTS FINAL AGENCY ACTIONS RIPE FOR REVIEW?

This all suggests that the likely "binding" effect of an agency document influences how courts answer the initial question of whether a document is subject to judicial review, which then appears to influence whether it should have been promulgated in accordance with the APA's notice-and-comment rulemaking requirements. As well it should. But the problem is that the concept of "binding" reflects a normative judgment. A document is only binding in a legal sense to the extent that a court will treat it as such.

by several commenters—using enforcement authority to order AFO to measure their emissions and to comply with all applicable environmental requirements would take much longer."Animal Feeding Operations Consent Agreement and Final Order, 70 Fed. Reg. 40018 (July 12, 2005).

196. For the most part, it was the program announced in the Federal Register notices containing the generic language of the consent agreements, not the ultimate individual agreements entered into by a vast majority of the industry, which petitioners attempted to challenge as a rulemaking. The agency even developed the compliance program as if it were a negotiated rulemaking, with stakeholder participation, circulation of drafts and even some measure of public comment. Animal Feeding Operations Consent Agreement and Final Order, 70 Fed. Reg. 40016 (July 12, 2005). It established a nationwide monitoring protocol, with the ultimate goal of allowing the agency and industry to identify what farms to regulate. Animal Feeding Operations Consent Agreement and Final Order, 70 Fed. Reg. 4958 (Jan. 31, 2005). This program, moreover, appears to have been precipitated when some states in their rulemakings under the CAA (the development of State Implementation Plans) had exempted these sources from regulation. As Judge Rogers lamented,

EPA's new enforcement protocol will have significant and immediate negative consequences . . . . Ensuring accountability and informed decisionmaking means an agency needs to hear from those who are affected before it adopts an enforcement policy that eliminates enforcement of several statutes for years for a significant part of the AFO industry . . . .

Ass'n of Irritated Residents, 494 F.3d at 1043–44.

197. A good example is National Ass'n of Homebuilders v. Norton, 415 F.3d 8 (D.C. Cir. 2005). There, the United States Fish and Wildlife Service noticed in the Federal Register the availability of protocols that private parties could use to determine the possible presence of a particular species protected under the ESA and, as such, the likely need for such parties to obtain a permit under the Act. Id. at 11–12. The plaintiff argued that the protocols amounted to a substantive rule and should have been adopted in accordance with the APA. Id. The court effectively examined whether the protocols were binding, and concluding that they were not, held that that the protocols could not be judicially reviewed as final agency action. Id. at 13–17.
Admittedly, a document can be binding in a practical sense, as the court in Appalachian Power noted.\textsuperscript{198} But this is true only to the extent that parties perceive or expect that the document can be used in a court to force a particular result. The suggestion that private parties might nonetheless feel compelled to adhere to particular guidance, even if they believe it is incorrect and not legally justified, overstates the matter. Parties who truly believe that a guidance document is illegal or is costly for them will challenge it. And their perception and expectation ultimately rests upon a prediction of how a court might treat a document in a legal sense. Given this circularity, is there an answer that will allow agencies to continue to develop policy or guidance documents and issue interpretive rules without going through APA notice-and-comment rulemaking?

One answer is to have some generalized notion of how to treat agency policy statements, guidance documents or interpretive rules, when they have not been published in accordance with the APA’s notice-and-comment rulemaking requirements. If courts recognize that all such documents do not create enforceable rights or obligations, and only serve to direct agency personnel and inform the public in advance of how the agency generally expects to exercise its discretion when acting, then there would be no need for following the APA notice-and-comment rulemaking requirements (although notice and comment might still be useful\textsuperscript{199}). It should make little difference what any particular document says or does, the present focus of some courts. Rote phrases, containing carefully crafted words, deliberately divvied out throughout a document, ought not to determine a document’s fate.

It is an agency’s actual use of a document in a specific circumstance that will allow a court to examine whether the agency’s action is inconsistent with the law or otherwise arbitrary or capricious. Interpretations might be persuasive, or they might not be. An agency’s decision to change its guidance or interpretation may reflect arbitrary or capricious behavior—or it may not. These are all legitimate questions for courts to consider in the context of reviewing the merits of an otherwise final and reviewable agency action or a case against a third party. There is, after all, no need for what would appear to be the equivalent of pre-enforcement review that is typically not available

\textsuperscript{198} See Appalachian Power Co. v. EPA, 208 F.3d 1015, 1021 (D.C. Cir. 2000).

\textsuperscript{199} As explained later, greater deference may apply when an agency acts pursuant to notice-and-comment rulemaking. See infra notes 274–360 and accompanying text. Mathew C. Stephenson aptly notes that the level of formality surrounding the process an agency uses to announce its views may affect the agency’s judgment on its prospects before a reviewing court. Mathew C. Stephenson, The Strategic Substitution Effect: Textual Plausibility, Procedural Formality, and Judicial Review of Agency Statutory Interpretations, 120 HARV. L. REV. 528, 546 (2006). An agency is likely to interpret a statute more aggressively when employing formal procedural tools, in large measure because “the level of actual deference to agency interpretative decisions will be higher when the agency proceeds formally . . . .” Id. at 552. See also Einer Elhauge, Preference-Estimating Statutory Default Rules, 102 COLUM. L. REV. 2027, 2137–48 (2002); M. Elizabeth Magill, Agency Choice of Policymaking Form, 71 U. CHI. L. REV. 1383, 1437–42 (2004).
anyway. Absent compelling circumstances, therefore, pre-enforcement review of such documents should not occur.

Following this type of approach may avoid odd decisions like Animal Legal Defense Fund v. Veneman, a decision subsequently vacated sua sponte by an en banc Ninth Circuit panel.\textsuperscript{200} There, the Department of Agriculture deliberately developed vague regulations governing standards for nonhuman primate conditions of confinement, and the agency subsequently began to develop draft policy guidance filling in the gaps.\textsuperscript{201} When the agency abandoned the policy guidance, animal welfare organizations promoting the guidance challenged the agency’s decision. They claimed that the failure to finalize the guidance amounted to a reviewable final agency action.\textsuperscript{202} In addressing whether it could review the agency’s decision to abandon finalizing the guidance, the court broke its analysis into whether the guidance, if finalized, would have been reviewable and whether the failure to finalize the guidance was itself reviewable.\textsuperscript{203} The court concluded that the policy, if finalized, would not have been a “legislative” rule requiring notice-and-comment rulemaking.\textsuperscript{204} The court nonetheless decided that it would have been a judicially reviewable “interpretative rule from which legal consequence flowed.”\textsuperscript{205} The court buttressed its conclusion by observing that the agency had published the draft policy in the Federal Register and invited public comment. By reasoning that the draft policy would have legal consequences, if adopted, the court observed that the converse necessarily followed—the failure to adopt the policy had the legal consequence of allowing the status quo to remain.\textsuperscript{206} The court then allowed judicial review, employing as precedent cases reviewing an agency’s decision to withdraw a proposed legislative rule.\textsuperscript{207} This analysis seems questionable: if the guidance would have had legal consequences, why should it have been treated as a non-legislative rule? And if it truly would have been an “interpretive” rule, then why should the case have been ripe for review?

The case demonstrates the need for greater clarity when addressing the character of the governmental action and whether an action is both final and ripe for review. When he was on the D.C. Circuit, Chief Justice Roberts began to recognize the need to distinguish between agency actions that are “final” and those that ought to be judicially reviewable. For example, in Independent Equipment Dealers Ass’n, a trade association had requested EPA’s view on whether the association’s interpretation of one aspect of EPA’s CAA

\begin{thebibliography}{99}

\end{thebibliography}
regulations was correct. EPA responded soon thereafter in a letter, rejecting the association’s interpretation. The association then challenged the response letter under the CAA, claiming that it should have proceeded through notice-and-comment rulemaking, because it allegedly changed the agency’s interpretation of its regulation and, as such, was a legislative rule reviewable as a final action under the CAA. Then-Judge Roberts avoided focusing on whether the letter constituted “final” agency action, and instead suggested that the inquiry should address whether EPA’s action was reviewable. He concluded that it was not: it neither announced a new policy nor altered the regulations. It was simply informational and not binding, and to allow such a challenge would “muzzle any informal communications between agencies and their regulated communities—communications that are vital to the smooth operation of both government and business.” He drew support from the APA, as well, concluding that the letter was not an “agency action” because the letter did not “implement, interpret, or prescribe law or policy.”

While then-Judge Roberts correctly identified the need to distinguish between finality and reviewability, and intuitively recognized that allowing challenges to such documents would be problematic, he fell slightly short when articulating why. The rationale ought not to be because the challenged action does not “implement, interpret, or prescribe law or policy.” That would require an inquiry into the merits of whether, in fact, the challenged action does change the regulations, or prescribes some new law or policy. If the court must answer those questions first to determine whether to allow judicial review, then its reasoning becomes circular. Instead, the reason why such documents are not reviewable should be because they are not ripe for review.

This may require a more thorough understanding of the ripeness doctrine than we have seen from courts in the past, including clarifying the distinction between ripeness and finality. In Abbott Laboratories v. Gardner, the Court articulated the broad view that the doctrine of ripeness allows courts to avoid rendering premature judgments when presented with an abstract disagreement that might become better crystallized by subsequent agency actions.

215. 387 U.S. 136, 148–49 (1967). The underpinning for the ripeness doctrine is not entirely clear, whether it flows from Article III or serves merely serves as a judicial gloss on “finality” under the APA. See Poe v. Ullman, 367 U.S. 497 (1961) (avoiding constitutional issue when not clear that enforcement of challenged statutes would occur); but cf. U.S. Civil Service Comm’n v. Nat’l Ass’n of Letter Carriers AFL-CIO, 413 U.S. 548 (1973) (allowing pre-enforcement challenge when parties indicated that they wanted to engage in the otherwise prohibited conduct). As such, there are those who believe it should be abandoned as a part of any APA review. See John F. Duffy, Administrative Common Law in Judicial
Ripeness requires that a court "evaluate (1) the fitness of the issues for judicial
decision and (2) the hardship to the parties of withholding court
consideration."\textsuperscript{216} The doctrine effectively cautions that pre-enforcement or
application review of a particular "final" agency action is not necessarily
appropriate unless the matter is fit for review and hardship will occur absent
judicial intervention. Unfortunately, the doctrine encounters problems when its
application becomes overshadowed by the already murky concept of finality.

In \textit{National Parks Hospitality Ass'n v. Department of the Interior}, for
instance, a trade association for concessioners in the national parks challenged
a new rulemaking by the National Park Service.\textsuperscript{217} The Court, focusing on the
second element of the test (hardship to the parties without court intervention),
held that the issue was not ripe because the challenged rulemaking merely
reflected the agency's interpretation of a statute that it did not administer, and
as such did not create "adverse effects of a strictly legal kind."\textsuperscript{218} The Court
further emphasized that the regulation did not affect the conduct of the
regulated community.\textsuperscript{219} And when addressing the fitness for review, the Court
merely added a paragraph at the end of its opinion that the issue should "await
a concrete dispute" and, as such, was not ripe for review.\textsuperscript{220}

A similar inquiry into the legal effect of an agency decision persuaded the
Supreme Court in \textit{Bennett v. Spear} to focus on whether a particular agency
decision was a final agency action under the APA.\textsuperscript{221} In \textit{Bennett}, a group of
ranchers and irrigators challenged the USFWS's issuance of a biological
opinion under the ESA.\textsuperscript{222} The Service opined that the operation of a Bureau of
Reclamation project was likely to jeopardize the continued existence of the
Lost River sucker and the short-nose sucker, and also that the project had to
comply with certain measures to avoid an illegal "take" of either of the
species.\textsuperscript{223} Although the case principally involved whether the ranchers and
irrigators had standing to bring the action under the ESA citizen suit provision,
the government argued that, regardless of their standing, there was no judicially

\textit{Review, 77 TEX. L. REV.} 113, 162–75, 179 (1998) (suggesting that the doctrine of ripeness, like the
doctrine of exhaustion, has no place in an APA case).

\textsuperscript{223} Id. at 159, 170.
reviewable final agency action. The biological opinion, it asserted, was merely an advisory document, and the only reviewable action was any final decision by the Bureau of Reclamation on how it would operate its project. The Court held that an inquiry into finality requires “[f]irst, the action must mark the ‘consummation’ of the agency’s decision-making process—it must not be of a merely tentative or interlocutory nature. And second, the action must be one by which ‘rights or obligations have been determined,’ or from which legal consequences will flow.” The Court concluded that the biological opinion had direct and appreciable legal consequences, although quite narrow and pointed: in its view, the section of the biological opinion that addressed the take of the species carried with it immediate and important legal consequences, because absent compliance with certain measures to avoid take, the agency would be subject to the ESA’s sanctions. The Court, therefore, held that the biological opinion was final, implicitly assuming it was ripe for review.

Even when an agency does something other than issue policies, guidance or interpretations, if an agency action is ripe for review, judicial review should be available. Otherwise, courts risk engaging in myopic inquiries that ignore actual decisions by the agencies, such as in Fund for Animals, Inc. v. U.S. Bureau of Land Management. In Fund for Animals, the D.C. Circuit rejected a challenge to BLM’s implementation of its program for managing wild horses and burros on the public lands. Concerned that the number of wild horses and burros had grown too large, the agency developed a new strategy for addressing the burgeoning populations and requested increased funding from Congress to implement its strategy. After receiving the funding, BLM began implementing its new strategy, prompting the Animal Legal Defense Fund and others (collectively “ALDF”) to attempt to enjoin the program.

Shortly after ALDF filed the complaint, BLM issued an Instruction Memorandum (I-M), a short-term guidance document, outlining how the

233. Id. at 17.
agency expected to implement the program over roughly the fiscal year.\footnote{234}{Id.\footnote{235}{The plaintiffs filed a supplemental complaint responding to the agency’s instruction memorandum, but that claim became moot once the period for the memorandum had expired. \textit{Id.} at 18. The court also held that ADLF’s additional challenge to some site-specific agency actions undertaken in compliance with the program had become moot. \textit{Id.} at 22–23.}} That short-term I-M expired before the court considered the matter, prompting the court to conclude that any claim focused on the I-M was moot, and as such the court’s initial question was whether any “final agency action” existed that it could review.\footnote{235}{The plaintiffs filed a supplemental complaint responding to the agency’s instruction memorandum, but that claim became moot once the period for the memorandum had expired. \textit{Id.} at 18. The court also held that ADLF’s additional challenge to some site-specific agency actions undertaken in compliance with the program had become moot. \textit{Id.} at 22–23.} This led the court to focus solely on BLM’s budget request to Congress. Concluding that the budget request could not be treated as a rule because it did not implement, interpret or prescribe any law or policy, the request was not a judicially reviewable final agency action.\footnote{236}{Id.\footnote{237}{See \textit{id.} at 20 (“The budget request is a broad ‘programmatic’ statement”); \textit{id.} at 21 (“The budget proposal represents the Bureau’s latest plan . . . .”).}}

The court’s decision is analytically unsound. The court undoubtedly was concerned that, should review be available for presidential budget requests, a flood of litigation would rise from the numerous programs identified in such requests. But that concern perhaps obscured the real issue here; ADLF was not concerned with the budget request, but rather with challenging the program being implemented. The budget request merely articulated the elements of BLM’s actual program. And the court conceded that the budget proposal represented a programmatic agency action.\footnote{237}{See \textit{id.} at 20 (“The budget request is a broad ‘programmatic’ statement”); \textit{id.} at 21 (“The budget proposal represents the Bureau’s latest plan . . . .”).} Concurring in part and dissenting in part, Judge Griffith emphasized this point, noting that while budget requests are not reviewable, “this case is nothing more than a rather ordinary request for review of regulatory criteria promulgated by an agency in carrying out a congressional mandate.”\footnote{238}{Id. at 23 (Griffith, J., concurring in part, dissenting in part).} Judge Griffith, therefore, would have allowed review of the expired I-M—note that the BLM appeared to be following the expired I-M, and if any question persists about whether or not the agency was following the I-M, the court, at the very least, should have allowed that issue to be explored.\footnote{239}{\textit{Id.}}

These cases are emblematic of the challenges courts confront when reviewing agency guidance documents, a challenge made all-too illusory when trying to address whether a document is final or binding, or binding and so final, or if binding, not only final but also a “legislative” rule that should have gone through notice-and-comment rulemaking. Courts need to appreciate that a guidance document can be “final” in some sense but not “binding,” and that the document can be “final” and yet the case not ripe for review. This is because guidance documents may well \textit{appear} to mark the agency’s “consummation of its decision-making process,” but may not actually do so because such documents by their very nature are always “tentative or interlocutory” until applied in a particular circumstance. And whether or how any such documents
will be applied in a particular circumstance is unknown until later—or, to say it
differently, when the case becomes ripe. Cases such as Irritated Residents
and Fund for Animals underscore the point, because in both instances the
plaintiffs were challenging an agency’s actual implementation of a program or
policy.

IV. DEFERENCE TO AGENCY INTERPRETATIONS

If we accept that policy and guidance documents are just what they
purport to be—informal documents designed to alert the agency staff and the
interested public of the agency’s views or expected approach to a particular
issue—and ordinarily should not be susceptible to judicial review unless a party
can demonstrate that the matter is ripe for review, then how those documents
are used in a particular circumstance becomes pivotal. We cannot, for instance,
initially say they generally are immune from review, and later conclude that
they are “binding” and thus merit either judicial enforcement or some measure
of deference. Yet this is precisely the problem posed by these informal
documents.

A good example is the National Park Service’s (NPS) Management
Policies (MP), such as those involved in The Wilderness Society v. Norton. Drafted
primarily during the Clinton administration, these polices had last been
revised in early 2001. When the Bush administration released drafts of new
policies, the New York Times published stories about how a political appointee
in the Department of the Interior had allegedly tried to influence their outcome;
NPS director Fran Mainella even wrote a letter to the New York Times
defending the NPS’s actions and indicating that nothing improper had been
done. In February 2006, Congress held an oversight hearing on the 2006
draft policies. A coalition of retired NPS employees claimed that the policies
violated the law and were critically flawed. Notably, that coalition of former

240. Gwendolyn McKee posits that finality should focus principally on whether the agency action
marks the conclusion of a decisionmaking process, and that any fuzziness between finality and ripeness
should be separated to avoid unnecessarily flooding the courts. Gwendolyn McKee, Judicial Review of

245. NPS Retirees Reject “Hoffman Lite” Version of National Park Service Management Policies,
Warn of Grave Dangers Still Posed by Rewrite, available at http://www.prnewswire.com/cgi-
NPS retirees told Congress that the “NPS Management Policies have become recognized, even by the Courts, as the official interpretation of the legislation establishing the NPS and its mission.”

Perhaps that statement alone illustrates the confusion surrounding the binding nature of policy or guidance documents.

While the D.C. Circuit held in Wilderness Society that the 2001 MPs were not judicially enforceable, that does not necessarily dictate how such policies will be treated in other litigation. In Southern Utah Wilderness Alliance (SUWA) v. National Park Service, the district court held that the 2001 MPs were entitled to Chevron deference, because they were procedurally similar to formal regulations. More recently, relying on SUWA v. NPS, wilderness advocates challenged a Park Service management plan for the Colorado River through Grand Canyon National Park, arguing that, by affording these policies Chevron deference, the SUWA v. NPS court had indicated that the policies must be judicially enforceable—thus rejecting the analysis in Wilderness Society.

The district court dismissed this argument, noting that the Ninth Circuit precedent would suggest that such policies have the force and effect of law only if they purport to prescribe substantive rules. The court emphasized that the MPs did not affect individual rights and obligations, and that the failure of the NPS to publish the policies in the CFR evinced NPS’s intention not to announce enforceable substantive rules. And it would be inappropriate to apply the entirely different question of deference, the court reasoned, to whether a policy has the force and effect of law.

Ultimately, whether such documents are judicially reviewable or enforceable by third parties cannot be divorced from the level of deference.

247. See supra notes 114–126 and accompanying text.

251. River Runners for Wilderness, 2007 WL 4200677, at *5–6. The court relied on United States v. Fifty-Three Eclectus Parrots, 685 F.2d 1131, 1136 (9th Cir. 1982), where the court articulated a two-part test for determining whether a policy would have the force and effect of law: it “must be legislative in nature, affecting individual rights and obligations,” and “it must have been promulgated pursuant to a specific statutory grant of authority and in conformance with the procedural requirements imposed by Congress.” Id. at *5–9.

252. Id.

253. Id. at *7–8.
courts will afford these policies when resolving particular cases. Several Supreme Court decisions since 2000 involving deference to agency interpretations appear poised to avert the percolating problem of the reviewability and enforcement of agency guidance documents. These decisions are Christensen,254 Mead,255 National Cable,256 and Oregon v. Gonzales.257 Legions of articles have been written on the constitutional and practical legitimacy of the now well-recognized Chevron doctrine258: if a court determines "Congress has directly spoken to the precise question at issue," then agencies must obey that command—albeit as articulated by the court. If, however, the statutory language is ambiguous, then the court will defer to an agency's reasonable interpretation.259 Some, such as Cass Sunstein, suggest that the Court has now introduced a third element of the inquiry, avoiding Chevron if the matter involves a "fundamental issue . . . that goes to the heart of the regulatory scheme . . . ."260

The oft-stated justification for affording deference is that whenever Congress has left a gap in a statute, it necessarily understood and expected that it was delegating to the agency the authority to exercise policy judgments, and that agencies are better suited than judges to choose between alternately acceptable policy choices.\footnote{261} If we accept that courts must afford some measure of deference to agency judgments, whether described in those terms or not,\footnote{262} the Supreme Court's decision in \textit{Christensen} marks a critical juncture in the Court's treatment of informal agency guidance documents. In \textit{Christensen}, the Court addressed whether the Fair Labor Standards Act prohibits an employer, whose employee is otherwise entitled to receive overtime, from requiring the employee to use compensatory time in lieu of receiving cash payments for that overtime.\footnote{263} In reaching this conclusion, the Court addressed whether it should defer to a Department of Labor Opinion Letter which concluded that employers could compel the use of compensatory time only in those instances where the employee so agreed in advance.\footnote{264} The United States and the petitioner argued that the opinion letter must be given deference under \textit{Chevron}.\footnote{265} The Court disagreed, noting that "interpretations contained in

\footnote{261. \textit{Chevron U.S.A., Inc. v. Natural Res. Def. Council}, 467 U.S. 837, 844, 865–66 (1984). The Court in \textit{Smiley v. Citibank (S.D.)}, N.A., articulated the reason for deference as follows: \textquote{We accord deference to agencies under \textit{Chevron} . . . because of a presumption that Congress, when it left ambiguity in a statute meant for implementation by an agency, understood that the ambiguity would be resolved, first and foremost, by the agency, and desired the agency (rather than the courts) to possess whatever degree of discretion the ambiguity allows.} 514 U.S. 735, 740–41 (1996). Cass Sunstein suggests that "[t]here is no reason to believe that in the face of statutory ambiguity, the meaning of federal law should be settled by the inclinations and predispositions of federal judges. The outcome should instead depend on the commitments and beliefs of the President and those who operate under him." Cass R. Sunstein, \textit{Beyond Marbury: The Executive's Power to Say What the Law Is}, 115 \textit{Yale L.J.} 2580, 2582 (2006). In an analogous vein to Sunstein's acceptance of agencies' law-interpreting power, Jack Goldsmith and John F. Manning proffer that the President's ability to fill in the details of ambiguous statutes rests upon what they call the President's "completion power." Jack Goldsmith and John F. Manning, \textit{The President's Completion Power}, 115 \textit{Yale L. J.} 2280 (2006). \textit{Chevron} step two is where Kenneth Bamberger would allow agencies to employ normative cannons of interpretation, in the first instance, with courts invested with the power to review norm-impinging agency choices to determine whether the agency's choice promoted or retarded "institutional barriers to accurate norm application." Kenneth Bamberger, \textit{Normative Cannons in The Review of Administrative Policymaking}, 118 \textit{Yale L. J.} (forthcoming 2008).

\footnote{262. This is not to suggest a void in critics of deference. Elizabeth V. Foote, for instance, argues that \textit{Chevron} inappropriately undermines the appropriate standard of review articulated in either the agency's specific statutory program or the APA. Elizabeth V. Foote, \textit{Statutory Interpretation or Public Administration: How Chevron Misconceives the Function of Agencies and Why It Matters}, 59 \textit{Admin. L. Rev.} 673 (2007).

\footnote{264. \textit{Id.} at 586–87.

\footnote{265. Petitioner actually argued that "[t]he courts must defer to all of the Secretary's 'fair and considered judgment on the matter in question,' even those which are set forth in a brief or opinion letter and not expressly contained in the Department's 'legislative' or 'interpretive' regulations." Petitioner's Brief at 33, \textit{Christensen v. Harris County}, Texas, 529 U.S. 576 (2000) (No. 98-1167), 1999 WL 1204475 (citing Auer v. Robbins, 519 U.S. 452, 462 (1997)). In its amicus curiae brief supporting the petitioner, the United States similarly cited \textit{Auer} for the principle that the Secretary's position was entitled to "substantial deference." Brief for the United States As Amicus Curiae Supporting Petitioners}
policy statements, agency manuals, and enforcement guidelines, all of which lack the force of law—do not warrant *Chevron*-style deference.\(^{266}\) The Court, relying upon its 1944 opinion in *Skidmore v. Swift & Co.*,\(^{267}\) further noted that, although interpretations contained in *regulations* are entitled to deference, interpretations of statutory language contained in *other formats* only are "entitled to respect" "to the extent that those interpretations have the "power to persuade.""\(^{268}\) It also rejected, arguably in dicta, the argument that the agency’s opinion letter, interpreting the agency’s regulations, should be given deference under *Auer v. Robbins*.\(^{269}\) The Court opined that "*Auer* deference is warranted only when the language of the regulation is ambiguous;" otherwise an agency could create de facto a new regulation under the guise of interpreting existing regulations, which have the force and effect of law.\(^{270}\)

The Court’s aside about affording *Auer* deference when an agency interprets its own ambiguous regulations (as opposed to statutes) presents an interesting paradox. To begin with, the suggestion that *Auer* deference remains viable appears troubling to some,\(^{271}\) particularly since the Court cites to *Bowles v. Seminole Rock & Sand Co.*,\(^{272}\) along with its reference to *Auer*. In *Seminole Rock*, the Court articulated that an agency’s interpretation of its own ambiguous regulation would be "controlling" unless "plainly erroneous" or "inconsistent" with the underlying regulation.\(^{273}\) And Justice Scalia’s opinion for the Court in *Auer* simply reaffirmed the vitality of *Seminole Rock*.\(^{274}\) But *Christensen* arguably reflects the majority of the Court’s sensitivity to the academic
commentary criticizing *Seminole Rock*.275 That said, no other Justice joined Justice Scalia’s dissent in *Christensen*, where he urged that *Seminole Rock* or *Auer* style deference should apply to agency interpretations of regulations.276 And the entire Court, as recently as 2007 in *Long Island Care at Home, Ltd. v. Coke*, appears to accept an agency’s interpretation of its regulation as controlling unless it is plainly erroneous or inconsistent with the underlying regulation.277 This approach, however, encourages the drafting of ambiguous regulations, followed next by the development of guidance documents interpreting those regulations, which then would be entitled to *Auer* deference. But *Auer* deference might apply only in connection with the issuance of the first guidance document, because any subsequent guidance document altering the interpretation might require notice-and-comment rulemaking.278

*Christensen* soon became overshadowed by the Court’s opinion in *United States v. Mead Corp*, where the Court attempted once again to articulate its standard for affording deference to informal agency documents.279 In *Mead*, the Court addressed whether a United States Customs Service tariff classification ruling warranted judicial deference.280 Writing for an 8-1 majority, Justice Souter recounted the Court’s many decisions touting the need for affording deference, whether acting under an express or implied delegation of authority from Congress—such as when a statute is ambiguous and the agency must fill the resulting gap.281 Typical indicators of such delegation, according to the Court, are when Congress provides the agency with authority to promulgate rules or engage in adjudications.282 These formal processes “tend[] to foster the fairness and deliberation that should underlie a pronouncement” that will have the force and effect of law.283 But the absence of these formal processes is not necessarily dispositive, Justice Souter added.284 With these standards in mind, the Court then proceeded to analyze whether

---

275. John F. Manning argues that *Seminole Rock* (or ultimately, *Auer*) deference undermines separation of power principles, and that “*Skidmore v. Swift & Co . . . establish[es] a nonbinding version of deference that accounts for an agency’s expert judgment when the agency is not exercising delegated interpretive lawmaking power. John F. Manning, Constitutional Structure and Judicial Deference to Agency Interpretations of Agency Rules, 96 COLUM. L. REV. 612, 686 (1996) (emphasis added); see id. at 618, 639, 669, 681. See also Robert A. Anthony, Which Agency Interpretations Should Bind Citizens and Courts?. 7 YALE J. ON REG. 1 (1990). Prior to *Christensen*, Richard Pierce, typically critical of unnecessary judicial intervention into rulemaking proceedings, deftly suggested that giving “binding effect” to interpretive rules or policy statements would not be an appropriate way to solve the rulemaking dilemma (the ossification of rulemakings) faced by agencies. Pierce, Deossify, supra note 19, at 85–86.

Congress either ever "thought" the classifications would be entitled to deference or whether it "meant to delegate authority to Customs to issue classification rulings with the force of law."\footnote{285} Finding no such intent by Congress, the Court treated the classifications as if they were informal agency guidance documents of the type identified in \textit{Christensen}, and as such possibly entitled to \textit{Skidmore} deference.\footnote{286}

The Court's decision in \textit{Mead} openly recognized that this new era of administrative law needs guidance. Justice Souter's opinion observed that agencies now act in "multifarious" ways, and the range of ways in which agencies act must be considered when determining the level of deference afforded their actions.\footnote{287} He responded to Justice Scalia's dissent, where Justice Scalia announced that he would bury \textit{Skidmore} and either apply \textit{Chevron} deference or not,\footnote{288} by explaining that the Court has "tailor[ed] deference to [a] variety" of "indicators that Congress would expect \textit{Chevron} deference."\footnote{289}

The Court's decision in \textit{Mead}, no matter how well-intentioned, is nonetheless problematic. Instead of simply interring \textit{Chevron} deference when an agency acts informally, the Court perpetuated the problem of how to articulate a rational reason for distinguishing among different types of informal agency actions. Justice Souter at one point focuses on whether Congress might have intended that the classification rulings have the force of law, while soon thereafter suggesting that the inquiry might focus on whether Congress intended to delegate authority to issue such rulings that have the force of law, and then later on whether Customs "ever set out with a lawmaking pretense in

\footnotetext{285}{Id. at 231–32. Justice Souter summarized the Court's holding near the outset of his opinion: We hold that administrative implementation of a particular statutory provision qualifies for \textit{Chevron} deference when it appears that Congress delegated authority to the agency generally to make rules carrying the force of law, and that the agency interpretation claiming deference was promulgated in the exercise of that authority. Delegation of such authority may be shown in a variety of ways, as by an agency's power to engage in adjudication or notice-and-comment rulemaking, or by some other indication of a comparable congressional intent. Id. at 226–27. Only a few years earlier, the Court had held that Customs regulations were entitled to \textit{Chevron} deference. See \textit{United States v. Haggar Apparel Co.}, 526 U.S. 380 (1999).}

\footnotetext{286}{Id. at 234–35. The Court observed, but did not decide, "[t]here is room at least to raise a \textit{Skidmore} claim here, where the regulatory scheme is highly detailed, and Customs can bring the benefit of specialized experience to bear on the subtle questions in this case . . . ." Id. at 235.}

\footnotetext{287}{Id. at 236.}

\footnotetext{288}{Justice Scalia's lengthy dissent warned that the Court's decision might prove to be "one of the most significant opinions ever rendered by the Court dealing with the judicial review of administrative action," and a "bad" one in his view. Id. at 261 (Scalia, J., dissenting). He premised one aspect of his analysis on a concern obviated by the Court's subsequent decision in \textit{National Cable & Telecommunications Ass'n v. Brand X Internet Services}, 545 U.S. 967 (2005). Justice Scalia opined that "[w]hat a court says is the law after according \textit{Skidmore} deference will be the law forever, beyond the power of the agency to change even through rulemaking." Id. at 249–50. In \textit{Brand X}, discussed infra notes 296–315 and accompanying text, the Court rejected that analysis.}

\footnotetext{289}{Id. at 236–37.}
mind when it undertook to make classifications like these." Each of these inquiries could produce a different result. Not surprisingly, therefore, Mead has produced a wave of critical commentary. In her cogent account of the impact of Mead on the lower courts and the need for greater coherence, Lisa Bressmen perhaps best summarizes the present quagmire when she stated that "[y]ears after Mead, we are no closer to determining when Congress has delegated, and an agency has exercised, authority to issue interpretations with the force of law."

The Court nevertheless continues invoking the standards articulated in Mead when addressing deference to guidance documents. In Barnhart v. Walton, for instance, Justice Breyer observed that "Courts grant an agency's interpretation of its own regulations considerable leeway," adding that the Court in Mead clarified that Chevron deference did not necessarily require notice-and-comment rulemaking. His remark about Mead seems somewhat gratuitous, however, as Barnhart involved the application of Chevron deference to an agency's statutory interpretation contained in a regulation—and no one there disputed that the agency had accurately interpreted its regulation. Guidance documents only became relevant because Justice Breyer referenced consistent earlier agency informal interpretations, noting that "this Court will normally accord particular deference to an agency interpretation of ‘longstanding’ duration." And that recognition carried particular force in that case, since Congress had re-enacted the applicable statutory provisions and opted not to change the agency's longstanding interpretation.

In June 2005, the Supreme Court preserved one critical aspect of agency flexibility. In National Cable & Telecommunications Ass'n v. Brand X Internet Services, much was at stake: the ability of a new administration to ascend into power and, through rulemaking, alter a prior administration's interpretation and

implementation of an ambiguous statutory program.\textsuperscript{296} The \textit{Chevron} doctrine stood on the side of future administrations, while the principle of \textit{stare decisis} served as a potential counter-weight. The United States warned that there "is a significant conflict in the circuits concerning the interaction of the \textit{Chevron} doctrine with the rule of \textit{stare decisis}."\textsuperscript{297} It further argued that \textit{Chevron} deference should not be displaced by principles of \textit{stare decisis} and a prior judicial interpretation.\textsuperscript{298} Industry petitioners elaborated, arguing that interpretations of ambiguous statutory language should not rest on an approach that favors a race to the courthouse, with the outcome solidified until further congressional action.\textsuperscript{299}

In a 6-3 decision, the Supreme Court refused to limit a future administration's flexibility to re-interpret ambiguous statutory language through rulemaking.\textsuperscript{300} Writing for a majority, Justice Thomas opined that Congress delegated to the Federal Communications Commission the authority to promulgate rules, and the Commission interpreted the statute while exercising that authority.\textsuperscript{301} As such, it was entitled to \textit{Chevron} deference when interpreting ambiguous language.\textsuperscript{302} The agency could change a prior interpretation, provided that it "adequately explains the reason for a reversal of policy," and it would not be bound by a prior judicial construction:

A court's prior judicial construction of a statute trumps an agency construction otherwise entitled to \textit{Chevron} deference only if the prior court

\textsuperscript{296.} 545 U.S. 967 (2005).
\textsuperscript{298.} \textit{Id.} at 40–41. The United States distinguished \textit{Neal v. United States}, 516 U.S. 284 (1996), by suggesting that the interpretation at issue there was the only permissible interpretation of that statute—effectively an interpretation rendered under a \textit{Chevron} step one analysis. \textit{Id.} The Cable-Industry petitioners argued that \textit{stare decisis} would not trump \textit{Chevron} deference, although it believed that the Court did not need to reach that issue. Brief of Cable-Industry Petitioners at 16, 30, Nat'l Cable & Telecomms. Ass'n v. Brand X Internet Servs., 545 U.S. 967 (2005) (Nos. 04-277, 04-281).
\textsuperscript{300.} \textit{Brand X}, 545 U.S. at 997–1003.

\textsuperscript{302.} \textit{Id.}
decision holds that its construction follows from the unambiguous terms of the statute and thus leaves no room for agency discretion. Justice Thomas emphasized that Chevron was premised upon the principle that it is for agencies, not courts, to fill statutory gaps.

With that issue resolved, Justices Breyer and Scalia then engaged in a dialogue over whether Chevron deference could exist in circumstances where the agency does not act in a rulemaking process pursuant to delegated authority. Justice Scalia, joined by Justices Souter and Ginsburg on only the merits of the Court's decision, disagreed with the Court's approach toward deference under Mead. Instead, Justice Scalia believed that the Court should afford deference beyond what it said in Mead. Concurring in the Court's opinion, Justice Breyer responded that Mead clearly suggests that Chevron deference is not necessarily dependent upon the administrative formality of a rulemaking. "It is not surprising," he wrote, "that the Court would hold that the existence of a formal rulemaking proceeding is neither a necessary nor sufficient condition for according Chevron deference to an agency's interpretation of a statute."

---

303. Id. at 967, 982. "Only a judicial precedent holding that the statute unambiguously forecloses the agency's interpretation, and therefore contains no gap for the agency to fill, displaces a conflicting agency construction." Id. at 982-83; see also id. at 985 ("Before a judicial construction of a statute, whether contained in a precedent or not, may trump an agency's, the court must hold that the statute unambiguously requires the court's construction."). Justice Thomas agreed that Neal was inapposite, as it involved unambiguous statutory language. Id. at 984. This appears consistent with ending the inquiry at step one of Chevron, when a court initially must determine whether the agency's interpretation is clearly right or clearly wrong—perhaps another way of stating that the language is not ambiguous. See Gen. Dynamics Land Sys., Inc. v. Cline, 540 U.S. 581, 600 (2004) (describing interpretation as "clearly wrong" and that contained in Edelman v. Lynchburg College, 535 U.S. 106 (2002) as "clearly right").

305. Id. at 1003-20.

306. Id. at 1005 (Scalia, J., dissenting).

307. Id. at 1014-15 (Scalia, J., dissenting). Writing for a majority in Riegel v. Medtronic, Inc., 128 S. Ct. 999, 1009 (2008), Justice Scalia would have applied Skidmore deference to an agency interpretation contained in an amicus brief, albeit with the level of deference reduced by a change in interpretation.

308. Brand X, 545 U.S. at 1014-20 (Scalia, J., dissenting).

309. Id. at 1003-05 (Breyer, J., concurring).

310. Id. at 1004. In Barnhart v. Walton, 535 U.S. 212, 217-22 (2002), Justice Breyer examined whether an agency's construction of a statute (in its regulation) was permissible, under Chevron step two. In concluding that it was, he relied upon earlier agency guidance documents illustrating that the interpretation was longstanding. Id. at 219-21. He added that merely because the prior interpretation did not occur following notice and comment "does not automatically deprive that interpretation of the judicial deference otherwise due," citing Chevron and then invoking Mead. Id. at 221-22. Elsewhere, Justice Breyer elaborates on his approach toward agency deference, explaining that deference ought to be governed by a court's judgment about whether and to what degree it can assume that a reasonable legislator intended that an agency could interpret an ambiguous term and through what means. STEPHEN BREYER, ACTIVE LIBERTY: INTERPRETING OUR DEMOCRATIC CONSTITUTION 85, 104-08 (2005). Some lower courts, for instance, apply Chevron deference when they conclude that Congress expressly delegated to the agency the authority to render the particular type of agency decision. E.g., Pharm. Research and Mfrs. v. Thompson, 362 F.3d 817, 821-22 (D.C. Cir. 2004) (concluding that Chevron
But Justice Breyer never fully engaged Justice Scalia on a fundamental issue. Justice Scalia posited yet again his view that the Court's approach toward deference in *Mead* could lead to bizarre and possibly unconstitutional results. He questions, for instance, what would happen if a particular agency's interpretation is not entitled to deference and a court instead concludes that the "best" interpretation contradicts the agency's view. The agency, according to Justice Scalia, could then respond by adopting its rejected interpretation in a rulemaking proceeding, and subsequently be upheld under *Chevron*. This he believed "is not only bizarre. It is probably unconstitutional." He also feared that courts would now have to determine whether a prior judicial interpretation was premised upon a *Chevron* step one analysis, and if it was, whether the same stare decisis principle would apply. "I would," he opined, "adhere to what has been the rule in the past: When a court interprets a statute without *Chevron* deference to agency views, its interpretation (whether or not asserted to rest upon an unambiguous text) is the law."

Even after *Christensen* and *Mead*, federal agencies curiously still argue for *Chevron* deference under circumstances where it would no longer apply, including where an agency would otherwise argue that a guidance document was not a reviewable final agency action. Perhaps the most apt example involves a case where three law students were denied the benefit of their student loan cancellation due to their present employment. The critical issue was the extent that the court should defer to Department of Education (DOE) interpretations regarding the criteria for student loan cancellation, which were pronounced in a student aid financial handbook, and through telephone calls and e-mails. The handbook, according to the court, introduced a new criteria not found in the statute or the regulation—and the regulation merely parroted the statute. The district court upheld the DOE's interpretation of the statute deference was applicable to Secretary of the United States Dept. of Health and Human Services' interpretation of the Medicaid Act); Hospital Corp. of Am. v. Comm. of Internal Revenue, 348 F.3d 136 (6th Cir. 2003) (finding that *Chevron* deference applied to regulation issued without notice and comment); Schneider v. Feinberg, 345 F.3d 135 (2d Cir. 2003) (granting *Chevron* deference to tables not published along with a duly published regulation); see also Tualatin Valley Builders Supply, Inc. v. United States, 522 F.3d 937, 944-48 (9th Cir. 2008) (O'Scannlain, concurring) (urging *Chevron* deference for IRS revenue procedure).

313. *Id.* at 1017.
314. *Id.* According to Justice Scalia, executive agencies may not overturn or disregard decisions rendered by Article III courts. *Id.* "That is what today's decision effectively allows. Even when the agency itself is party to the case in which the Court construes a statute, the agency will be able to disregard that construction and seek *Chevron* deference for its construction next time around." *Id.*
315. *Id.* at 1019.
317. *Id.* at 78.
318. *Id.* at 75-76, 78.
and its regulations, giving the agency some degree of deference.\(^2\)\(^3\) On appeal, the DOE argued for *Chevron* deference, which, if applicable, the Second Circuit observed was mandatory under *In re New Times Securities Services*.\(^2\)\(^4\)\(^5\) The DOE alternatively argued that it would be entitled to *Skidmore* deference if not *Chevron* deference.\(^2\)\(^6\)\(^7\) The Second Circuit easily dispatched the government’s *Chevron* argument, by holding that the interpretation did not “emerge from any formal rule-making procedures” and, instead, reflected “ad hoc, previously unwritten rules.”\(^2\)\(^8\)\(^9\)

The court then went further and, in reversing the judgment of the district court, rejected the government’s argument that it was entitled to *Skidmore* deference as a consequence of its specialized experience.\(^2\)\(^0\)\(^1\) Important in the court’s analysis is the fact that the interpretation was developed by a staff member, who “does not report to the Secretary, bears no law-making authority, and is constrained by political accountability.”\(^2\)\(^1\)\(^2\) In order for *Skidmore* deference to apply, there must be a thorough consideration of the issue that the Second Circuit suggested “requires a macro perspective that a staff member, acting alone, lacks.”\(^2\)\(^1\)\(^3\) The court distinguished this case from those where it has applied *Skidmore* deference to agency officials who “hold substantial responsibility.”\(^2\)\(^1\)\(^4\) And the court warned future litigants that it would not suffice if the agency head, after the fact or through the litigation, simply endorsed the staff member interpretation.\(^2\)\(^1\)\(^5\)

More recently, the Court in *Gonzales v. Oregon* further restricted the degree of deference afforded administrative agencies, when, for instance, it is not clear whether the agency is interpreting its own regulation or the underlying

\(^{324}\) Id. at 80.  
\(^{325}\) Id. The Second Circuit, for instance, refused to afford *Chevron* deference to an administrative law judge’s interpretation, where the judge lacked delegated authority to issue binding decisions. Lin v. U.S. Dep’t of Justice, 416 F.3d 184 (2d Cir. 2005). The court rejected the government’s argument that the immigration judge’s decision was a binding rule, carrying the force of law: “[t]here is, in sum, no reason to believe that an IJ’s summarily affirmed decision [by the Board of Immigration Appeals] contains the sort of authoritative and considered statutory construction that *Chevron* deference was designed to honor.” Id. at 191. The court further avoided *Skidmore* deference by concluding that the decision was not persuasive. Cf. Shi Liang Lin v. U.S. Dep’t of Justice, 494 F.3d 296 (2d Cir. 2007) (en banc) (on appeal after its remand, court addressed applying *Chevron* deference to the Board of Immigration Appeals subsequent decision).  
\(^{326}\) Id. The court also concluded that the interpretation neither had “validity” nor the “power to persuade,” additional elements for receiving *Skidmore* deference. Here, the court observed that the Department labeled its interpretation as “advisory” only, and as a tentative interpretation it would not have any power to persuade. Id. at 81–82 (“We are especially disinclined to defer to an agency when it does not purport to speak authoritatively.”).
In 1994, Oregon had legalized physician-assisted suicide.\(^{328}\) Within the first year of the Bush administration, Attorney General John Ashcroft published in the Federal Register what he styled an Interpretive Rule, concluding that the use of controlled substances in this manner violated the Controlled Substances Act (CSA).\(^{329}\) Attorney General Reno, under the Clinton administration, had earlier concluded that the CSA did not allow displacement of state authority.\(^{330}\) Oregon and others then challenged the interpretive rule issued by Attorney General Ashcroft.\(^{331}\)

Justice Kennedy's opinion for a 6-3 majority began by summarizing seemingly simple principles of deference, noting that substantial deference is afforded an agency's interpretation of an ambiguous regulation under *Auer*, or an ambiguous statute under *Chevron*.\(^{332}\) But an agency is only entitled to substantial deference of an ambiguous statute to the extent it qualifies for *Chevron* deference under *Mead*, otherwise the interpretation is merely "entitled to respect" under *Skidmore*.\(^{333}\) The government sought to defend its interpretation under an *Auer* standard of deference, claiming it was an interpretation of 21 C.F.R. § 1306.04.\(^{334}\) This, according to Justice Kennedy, was problematic, because "[a]n agency does not acquire special authority to interpret its own words when, instead of using its expertise and experience to formulate a regulation, it has elected merely to paraphrase the statutory language."\(^{335}\) After rejecting the application of *Auer* deference, effectively announcing an anti-parroting canon that would reduce the level of deference when an agency merely repeats statutory words, Justice Kennedy then rebuffed the suggestion that *Chevron* might apply; he reasoned that *Chevron* only would have applied if Congress had delegated the power to the Attorney General to...
issue such a rule—and here, the “CSA gives the Attorney General limited powers, to be exercised in specific ways.”\textsuperscript{337} And the type of rule did not fall within any of those specific circumstances.\textsuperscript{338} The Court, therefore, applied \textit{Skidmore} deference, with the agency’s reasoning diminished further by the Attorney General’s lack of expertise in the area and the “apparent absence” of any attempt on the part of the Attorney General to solicit the views of others.\textsuperscript{339}

When an agency issues a guidance document or interpretation, as was the case in \textit{Gonzales v. Oregon}, it should recognize that the document or interpretive rule will not be afforded anything more than \textit{Skidmore} deference if the agency intends to rely on it in a subsequent judicial challenge. This means cabining \textit{Chevron} deference to those instances where the agency has acted pursuant to notice-and-comment rulemaking, unless Congress has expressly and specifically provided otherwise. The language in \textit{Mead}, therefore, should be understood as not suggesting otherwise.\textsuperscript{340} The Court’s more recent language in \textit{Long Island Care} suggests as much.\textsuperscript{341}

Indeed, \textit{Skidmore} deference should apply when the agency acts informally. The reason is perhaps best illustrated by what happened in \textit{Northwest Ecosystem Alliance v. U.S. Fish and Wildlife Service}\textsuperscript{342} and thereafter. There, the Ninth Circuit reviewed the USFWS’s policy for identifying distinct population segments of species that might qualify for being listed under the ESA as either threatened or endangered.\textsuperscript{343} The court noted that Congress, in section 4(h) of the ESA, expressly delegated to the agency the authority to develop guidelines for listing, and required that those guidelines be developed in a manner similar to notice-and-comment rulemaking under the

\begin{itemize}
\item \textsuperscript{337} \textit{Id.} at 259. Justice Kennedy observed that one element of the Attorney General’s authority to adopt regulations on the scheduling of controlled substances required following the APA procedures for rulemaking, which was not done. \textit{Id.} at 259–61. The dissent opined that the Attorney General issued his memorandum as an interpretative rule, exempted from notice-and-comment rulemaking. \textit{Id.} at 281 (Scalia, J., dissenting).
\item \textsuperscript{338} \textit{Id.} at 259–61.
\item \textsuperscript{339} \textit{Id.} at 268–69. Dissenting, Justice Scalia (joined by Justice Thomas and the Chief Justice) questioned the efficacy of the anti-parroting cannon articulated by Justice Kennedy, and opined that Attorney General Ashcroft’s memorandum was entitled to \textit{Auer} deference or, at the very least, \textit{Chevron} deference. \textit{Id.} at 275–99 (Scalia, J., dissenting).
\item \textsuperscript{340} See supra notes 279–295 and accompanying text.
\item \textsuperscript{341} In an unanimous opinion, the Court provided its modern gloss on \textit{Chevron}, stating:
\begin{quote}
[T]he ultimate question is whether Congress would have intended, and expected, courts to treat an agency’s rule, regulation, application of a statute, or other agency action as within, or outside, its delegation to the agency of “gap-filling” authority. Where an agency rule sets forth important individual rights and duties, where the agency focuses fully and directly upon the issue, where the agency uses full notice-and-comment procedures to promulgate a rule, where the resulting rule falls within the statutory grant of authority, and where the rule itself is reasonable, then a court ordinarily assumes that Congress intended it to defer to the agency’s determination.
\end{quote}
\item Long Island Care at Home Ltd. v. Coke, 127 S.Ct. 2339, 2350–51 (2007).
\item 475 F.3d 1136 (9th Cir. 2007).
\item \textit{Id.} at 1140–45.
\end{itemize}
APA. In such a circumstance, the court held that the USFWS’s distinct population segment policy was entitled to \textit{Chevron} deference and then proceeded to uphold the policy.

But applying either \textit{Auer} or \textit{Chevron} in lieu of \textit{Skidmore} deference in such a circumstance is problematic. Not long after the Ninth Circuit’s decision, the Solicitor of the Department of the Interior issued a formal legal opinion questioning the language in both the policy and the court’s decision, and, with \textit{Brand X} in support, directed that its interpretation should be followed. Solicitor’s opinions \textit{must} be followed by agency officials, and they can trump informal agency documents, such as the distinct population segment policy.

Yet, solicitor’s opinions, which are not subject to any opportunity for notice-and-comment, are subject to the lower standard of \textit{Skidmore} deference. A future court, therefore, might confront the unnecessarily complicated problem of having to determine whether \textit{Brand X} allows a former policy that received \textit{Chevron} deference to be altered by a new interpretation only entitled to \textit{Skidmore} deference. It would have been much easier had the court in \textit{Northwest Ecosystem Alliance} simply afforded the policy \textit{Skidmore} deference, thus allowing the next court to examine the persuasiveness of the reasoning contained in each document. A uniform application of \textit{Skidmore} deference also might avoid the future problems with the anti-parroting canon confronted in \textit{Oregon v. Gonzales} and avoided more recently in \textit{Federal Express Corp. v. Holoweci}.

V. BRINGING SYMMETRY TO DISPARATE THREADS

The purpose of this Article is not to debate the political or constitutional legitimacy of the role of agencies in implementing presidential directives or policy. Nor is it necessary to address the wisdom of having greater

\begin{footnotesize}
344. \textit{Id.} at 1141–42. The heading to section 4(h) of the Act refers to “Agency guidelines.” Congress clearly understood the difference between guidelines and rulemakings; in the very next section of the Act it included in the heading “Submission to State agency of justification for regulations . . . .” 16 U.S.C. §§ 1533(h), (i) (2006).

345. \textit{Nw. Ecosystem Alliance}, 475 F.3d at 1143–45.

348. 128 S. Ct. 1147 (2008). In \textit{Federal Express Corp.}, the Court again confronted how to treat an agency’s interpretation of a statutory term parroted in the regulation, but it artfully avoided the issue by reasoning that the agency’s interpretation was reasonable under \textit{Skidmore} deference (thus avoiding the need to address \textit{Auer} deference). \textit{Id.} at 1156, 1158. Eskridge and Baer explain that \textit{Seminole Rock} (or \textit{Auer}) deference is only sporadically invoked, and they note the problem, identified in Justice Thomas’s dissent in \textit{Thomas Jefferson University v. Shalala}, 512 U.S. 504, 525 (1994) (Thomas, J., dissenting), of potentially encouraging agencies to develop vague regulations only to receive heightened deference. See Eskridge & Baer, supra note 258, at 1104.

349. This topic is widely discussed. See, e.g., Bruce Ackerman, \textit{The New Separation of Powers}, 113 \textit{Harv. L. Rev.} 633 (2000); Cynthia R. Farina, \textit{Undoing the New Deal Through the New
\end{footnotesize}
presidential control or involvement in agency decision making. As important as this debate may appear for understanding our constitutional structure, the reality is that administrative agencies must and do interpret congressional directives, and they will continue to do so and even change their interpretation as new administrations come to power. This, quite simply, is embedded in the modern administrative process. It is not surprising, therefore, that executive agencies during the past thirty-five years have generally reflected the philosophy of the then-President. After all, people vote for a President at least in part based on an expectation that administrative policies and priorities will change and reflect the views of their candidate. But the ability of executive agencies to effectuate change is constrained by Congress, bureaucratic inertia and the courts.

The question, though, is how much administrative law principles will unnecessarily inhibit agency flexibility. In this regard, the Court’s evolving approach toward deference to guidance documents is both promising and troublesome. It is promising to the extent that the Court acknowledges the need to distinguish between regulations and guidance documents. It is troublesome because the Court has yet to appreciate the interconnectedness of the doctrines of deference and finality/ripeness, and to distinguish between legislative and non-legislative rules. If it were to do so, several principles might provide a coherent structure for administrative law; a structure that does not unduly constrain agency flexibility.

First, we should recognize that the modern administrative state, embracing widespread public access to information through the internet, is dependent upon the ability of agencies to develop guidance documents, policy statements

and interpretive rules. Agencies must be able to develop and change these types of documents, based on new information, changes in the law, or even changes in the policy orientation of new administrations. Second, when an agency issues such documents, it should anticipate that courts will not afford them anything more than *Skidmore* deference.

Recognizing that notice-and-comment rulemakings entitled to *Chevron* deference are readily distinguishable from the myriad forms of guidance entitled to *Skidmore* deference comports with modern-day legislative practice. Congress today undoubtedly appreciates the different ways an agency acts. And clearly understood rules of deference will only enhance Congress’ decisions in the future. In the Energy Independence and Security Act of 2007, for instance, Congress directed that agencies prepare rulemakings, it encouraged “accelerated” rulemakings, and, where appropriate, it directed the issuance of “guidance.”350 We can expect that Congress’ choice of these different methods was deliberate, and its future choices will be even more informed if courts adhere to the conceptual framework proposed in this Article.

Third, a corollary to affording such documents diminished deference is the recognition that by their very nature they are not binding—that is, an agency may not simply rely on the document when implementing its program; rather, it may employ the reasoning contained in the document. But that is no different than saying that the agency must explain its decision fully, not merely invoke the document as if it were a rule contained in the CFR. Such a scenario may lessen the need for courts to explore whether—and the ability of parties to argue that—such documents are de facto legislative rules that have been issued inappropriately without the trappings of a notice-and-comment proceeding. This does not mean that, in unique circumstances, an agency action is immune from a claim that it has engaged in a de facto rulemaking, when the issue is both final and ripe, such as should have been the case in *Irritated Residents* or *Fund for Animals*. But aside from those instances where the agency’s action has crystallized sufficiently for a party to satisfy the requirements for finality and ripeness, administrative law doctrines should be clear to both agencies and the public that, while such documents might be informative, they cannot be dispositive when they are applied to the public.

Accepting these principles might avoid the dilemma that threatens agency flexibility. A new administration’s attempt to effectuate change is presented with two options. First, it may navigate the notice-and-comment process and possibly receive *Chevron* deference if interpreting an ambiguous statute it is charged with administering.351 Or, if appropriate, it can alter existing guidance documents.

---

Yet, when altering existing guidance documents, a new administration confronts a choice. If, in a new guidance document, the agency is modifying an interpretation or application of a statute contained in a prior guidance document, Skidmore deference may apply, but the Court in Federal Express cautioned that one aspect of Skidmore focuses on whether the agency had “applied its position with consistency.”352 This aspect of Skidmore, therefore, will naturally arise if the goal of the new administration is to do precisely the converse—change.

Alternatively, if, in a new guidance document, the agency is modifying an interpretation or application of its own regulations, which otherwise might receive Auer (or Seminole Rock) deference, the issue becomes even more problematic, because enough cases suggest that the agency must engage in notice-and-comment rulemaking when doing so.353 Of course, an agency might avoid this result by simply parroting the statute in its regulation and then in subsequent guidance documents merely requesting Skidmore deference by claiming that it was interpreting the statutory language, albeit with an understanding that it would have to explain any reason for its changing positions—effectively extending the principle of Brand X to instances where Skidmore rather than Chevron deference is applicable. Although such an approach makes little sense, if instead we require that the agency engage in notice-and-comment rulemaking, then we will vest in the first administration that issues a guidance document the ability to force any future administration through a notice-and-comment rulemaking process. We concomitantly will perpetuate the muddled reasoning that pervades the effort to differentiate legislative from non-legislative rules, as well as allow challenges to what otherwise are not final agency actions ripe for review. It seems far sounder to instead let the agency know that it will receive—albeit even diminished—Skidmore deference in lieu of Auer deference to the extent the agency has departed from a prior interpretation, and it chooses not to proceed through notice-and-comment rulemaking. Admittedly, this may sacrifice Auer deference in some instances, but it would do so on the altar of otherwise curtailing guidance documents or forcing agencies through notice-and-comment rulemaking. The need to avoid paralysis and ensure agency flexibility may demand this sacrifice.

And when Congress objects to the manner in which an agency has exercised its discretion, it may change the law or employ its appropriations power and block the agency from using any money to carry out its program. Thomas Merrill was correct when he posited that “[i]t is unlikely that Congress would stand idly by in response to a major realignment in the division of powers that enhanced an executive branch’s ability to institute policy changes

353. See supra notes 77–78 and accompanying text.
and minimized the role of the courts in checking administrative abuses, but he underestimates a more fundamental point. Congress does react, but often it does so in response to a specific agency initiative or court decision and undoubtedly with principles of deference in mind. It has passed riders preventing agencies from implementing rules, adopted moratorium on programs, prohibited agencies from implementing their interpretations.

355. Thomas Merrill further suggests that "Congress contemplate[s] courts would always apply independent judgment on questions of law, reserving deference for administrative findings of fact or determination of policy." Id. at 995. I would suggest that the modern era of legislative practice may be quite different, with savvy legislators and sophisticated lobbyists, coupled with active agency involvement in the development of new legislation, all of whom are acutely aware of the deference afforded executive agencies absent clear congressional directives. This explains why some modern environmental or energy legislation, unlike the broad statutes passed during the late 1960s and 1970s, are considerably more detailed and occasionally appear to reflect congressional micromanagement. The classic example is the detailed Clean Air Act Amendments of 1990, Pub. L. No. 101-549, 104 Stat. 2399 (codified as amended in scattered sections of 42 U.S.C.). In 1991, a congressional employee aptly observed that, "[I]f the courts continue to frustrate the intent of those who write the laws by finding discretion even where none was intended, it should not surprise anyone to find lawmakers writing new laws that are even more prescriptive and that state with greater clarity the limits of EPA's discretion." Steven Shimberg, Checks and Balance: Limitations on the Power of Congressional Oversight, 54 LAW & CONTEMP. PROBS. 241, 247 (1991). For instance, after the Eleventh Circuit issued a decision rejecting a decision by the NPS on the use of motor vehicles in the Cumberland Island, GA, wilderness area, Wilderness Watch and Public Employees for Environmental Responsibility v. Mainella, 375 F.3d 1085 (11th Cir. 2004), Congress passed an appropriations rider responding to the decision and effectively reinstating aspects of the NPS's approach by excluding certain areas from the wilderness category. Consolidated Appropriations Act, 2005, Pub. L. No. 447, § 145, 118 Stat. 2809, 3072-72 (codified as amended in scattered sections of 1 U.S.C.).

356. See generally R. Bryant McCulley, Note, The Proof is in the Policy: The Bush Administration, Nonpoint Source Pollution, and EPA's Final TMDL Rule, 59 WASH. & LEE L. REV. 237 (2002) (describing how EPA and Congress squared off over the implementation of the agency's rules for establishing total maximum daily loads under the CWA, with Congress passing a rider prohibiting the implementation of the rule but only to have the agency sign the rule before the effective date of the congressional action).

357. Since 1994, Congress, for instance, has imposed a moratorium on the expenditure of funds to process or accept applications for patents for mining or mill sites. See, e.g., Department of the Interior and Related Agencies Appropriations Act of 1995, Pub. L. No. 103-332, 108 Stat. 2499, 2519 (codified as amended in scattered sections of 43 U.S.C.). See generally John D. Leshy, Mining Law Reform Redux, Once More, 42 NAT. RES. L. J. 461 (2002). Similarly, when the Republican Party captured the majority of Congress in 1994, it eliminated funding for the USFWS's listing of species under the ESA. ROBIN KUNDIS CRAIG, ENVIRONMENTAL LAW IN CONTEXT 396-97 (2005). The listing moratorium prompted the Clinton Administration to issue a policy document, the Petition Management Guidance, to address how the agency would review listing petitions. Id. at 397-98. Yet, even though a court subsequently found the listing guidance inconsistent with the Act, Center for Biological Diversity v. Norton, 254 F.3d 833, 836 (9th Cir. 2001), the agency continued to argue that it could rely on the document. Such reliance became misplaced, however, after one court concluded that the guidance document had not been issued pursuant to the rulemaking requirements. See Colorado River Cutthroat Trout v. Kempthorne, 448 F. Supp. 2d 170, 177 (D.D.C. 2006) (noting that the court in Am. Lands Alliance v. Norton, 2004 WL 3246687 (D.D.C. June 2, 2004) had issued nationwide injunction against use of the guidance).

358. See Southern Utah Wilderness Alliance v. Bureau of Land Mgmt., 425 F.3d 735, 759-61 (10th Cir. 2005) (explaining that interpretation regarding R.S. 2477 incorporated into a proposed rule, with
and, when necessary, conducted oversight hearings.\textsuperscript{359} The Court in \textit{Federal Express} aptly acknowledged this reality when it observed that agencies are \textquote{subject to the oversight of the political branches,}\textsuperscript{360} and nothing suggests that this dynamic has led to a crisis in administrative law.

\textbf{CONCLUSION}

These issues are all too important, not only for the future of administrative flexibility in the area of environmental law, but also for resolving some of the apparent trends in administrative law. To the degree that Congress has left agencies with sufficient flexibility to fill statutory gaps, future administrations must enjoy the ability to implement policies and programs in a manner consistent with their principles. This means that courts should recognize that agency guidance documents are an important and useful tool for agencies, and that administrative law doctrines should be shaped by that reality. When the Bush administration began its exit from Washington D.C., it released a number of different guidance documents, ranging from a December 18, 2008 memorandum from the EPA Administrator on \textquote{EPA’s Interpretation of Regulations that Determine Pollutants Covered by Federal Prevention of Significant Deterioration (PSD) Permit Program,}\textsuperscript{361} to opinions issued by the Solicitor of the Department of the Interior.\textsuperscript{362} And so, one can presume that

\textsuperscript{362} See http://www.doi.gov/solicitor/opinions.html (the Bush administration Solicitor opinions M-37019 to M-37023 were all released to the public on the internet only shortly after the Obama Administration was sworn in).
\end{flushleft}
these documents are somehow intended to cabin the Obama administration's
flexibility, but a clear understanding of how to apply administrative law
principles to such documents would suggest otherwise.
