APPORTIONMENT OF INCOME FROM A SPOUSE'S SEPARATELY OWNED PROPERTY

California, in accordance with the majority of community property states, provides that the rents and profits from a spouse's separate property are also separate property.\(^1\) The earnings of either spouse, however, form the essence of the community property system,\(^2\) and are clearly allocable to the community.\(^3\) If either spouse devotes time, labor, and skill during marriage to the production of income from separate property, these two concepts come into direct conflict.\(^4\) In such cases problems arise whether the income should be divided between the community and separate interests,\(^5\) and if so, what method of apportionment should be used.\(^6\) In California, the proceeds of such separately owned property are theoretically con-

\(^1\) Cal. Civ. Code § 162: "All property of the wife, owned by her before marriage, and that acquired afterwards by gift, bequest, devise, or descent, with the rents, issues, and profits thereof, is her separate property." Cal. Civ. Code § 163: "All property owned by the husband before marriage, and that acquired afterwards by gift, bequest, devise, or descent, with the rents, issues, and profits thereof, is his separate property."

L. Rev. 271 (1922); Pomerosy, Community Property, 4 West Coast Refr. 305 (1984); see Yesler v. Hochstetter, 4 Wash. 349, 30 Pac. 398 (1892).

\(^6\) See King, The Challenge of Apportionment, 37 Wash. L. Rev. 483 (1962). In New Mexico and Washington the community seems to be limited to the salary that the husband draws from the business. See Katson v. Katson, 43 N.M. 214, 89 P.2d 524 (1939); Hamlin v. Merlino, 44 Wash. 2d 851, 272 P.2d 125 (1954); Estate of Dewey, 13 Wash. 2d 220, 124 P.2d 805 (1942). In New Mexico the income from a farm is apportioned in accord with the rule established in Pereira v. Pereira, 156 Cal. 1, 103 Pac. 488 (1909). Laughlin v. Laughlin, 49 N.M. 20, 155 P.2d 1010 (1944); see text accompanying notes 9–10 infra.
munity property to the extent they reflect the effort of the spouses, and separate to the extent they reflect the earning power of the separate property itself. In practice, however, it is not clear how this theoretical apportionment is to be made. An analysis of this problem, including a proposed solution, is the main objective of this comment.

The early cases of Pereira v. Pereira and Estate of Pepper are at the root of the existing confusion in California. The Pereira case held that when a husband continues to work after marriage in his separately owned business, the revenue from the business must be apportioned between the community and his separate estate. In making this apportionment, the California Supreme Court decided that the husband's separately owned capital, invested in what was a profitable business, should be credited with at least the legal interest rate, with the remainder of the business profits going to the community. But, one year later in Estate of Pepper, the same court refused to apportion the proceeds of the husband's separately owned nursery business because such proceeds were products of the land. The entire business profit was held to be the husband's separate property, notwithstanding the fact that during the marriage the husband devoted his time and labor exclusively to running the nursery.

In Estate of Neilson, decided in May of 1962, the California Supreme Court overruled the Pepper case, holding that profit resulting from the sale of products of land could be apportioned in the same manner as profits from other commercial ventures. In Neilson Justice Traynor set forth a method of apportionment based on several relevant California cases. These cases, however, do not appear to be reconcilable, since they rely to some extent on the basically conflicting doctrines of Pepper and Pereira. Consequently, the extent to which Neilson expunges the influence of Pepper and resolves the problems of apportionment is not

clear. The holdings of Pepper and Pereira, and the inconsistent manner in which subsequent cases have applied the two decisions, may still leave some uncertainty concerning the proper method for apportioning profits.18

While otherwise adopting the common law,19 the framers of the first California constitution chose to retain20 the civil law community property system.21 Common law principles, however, infiltrated that system in Pereira22 and Pepper,23 thus initially contributing to the confusion.24 A complete analysis of Neilson, therefore, must begin with the cases leading up to Pereira and Pepper. Such an historical treatment is undertaken in part I of this comment.25 Part II develops the law from Pereira and Pepper to Neilson,26 and part III discusses the present impact of Neilson.27 Finally, part IV proposes a method of apportionment for successful28 and losing29 businesses.

I

EARLY DEVELOPMENT OF THE PROBLEM

A. Rents and Profits of Separate Property Are Not Solely Community Property

The community property system was in force when California was under Mexican rule,30 and it was from the Spanish-Mexican civil law that the present community property system was derived.31 Under the Spanish-Mexican system the

24 The earlier decision in George v. Ransom, 15 Cal. 322 (1860), relied on common law notions to create the problem of apportionment in the first place, and without this decision the rents and profits of separate property would have been classified as wholly community property. L. REV. 12, 26-27 (1936).

In accordance with ordinary principles of international law, this legal system remained in force after California was ceded to the United States in the Treaty of Guadalupe Hidalgo. Estate of Buchanan, 8 Cal. 507 (1857); Fowler v. Smith, 2 Cal. 358, 359 (1852); Kirkwood, Historical Background and Objectives of the Law of Community Property in the Pacific Coast States, 11 WASH. L. REV. 1, 3 (1936). The Treaty of Guadalupe Hidalgo guaranteed that the property rights of Mexicans residing in California would not be affected by the ceding of California to the United States. 1 ARMSTRONG 432; see CONNAY 5. See also 2 WITKIN, SUMMARY OF CALIFORNIA LAW REAL PROPERTY § 2 (7th ed. 1960).
revenue from a spouse's separate property went into the community. This principle was based on the realization that "most things till touched by the hand of man are wholly unproductive," and the concept that each spouse is primarily interested in the welfare of the community. The original California constitution, adopted in 1849, included the following clause:

All property, both real and personal of the wife, owned or claimed by her before marriage, and that acquired afterward by gift, devise or descent shall be her separate property; and the laws shall be passed more clearly defining the rights of the wife, in relation as well to her separate property, as to that held in common with her husband.

The first California legislation dealing with community property followed the Spanish law, and provided that the rents and profits of either spouse's separate property belonged to the community.

In George v. Ransom, the California Supreme Court, relying on the aforesaid constitutional definition of the wife's separate property, held the legislation invalid with regard to income from the wife's separate estate. Such income was held to be her separate property. The reasoning of George was that the common law background of the framers of the constitution, coupled with the tendency in common law jurisdictions to recognize the rights of a wife to hold and administer property in her own name, was responsible for the adoption of the constitutional section in question. Thus, the court held that:

This term "separate property" has a fixed meaning in the common law, and had in the minds of those who framed the Constitution, the large majority of whom were familiar with, and had lived under that system. . . . It is not perceived that property can be in one, in fixed and separate ownership, with a right in another to control and enjoy all its benefits.

The facts of George presented the court with a situation in which a creditor of the husband was attempting to attach the dividends of stock owned separately by the

wife. The court's use of the common law was apparently influenced by a desire to protect the wife.

The proceedings in the Constitutional Convention do not appear to support the conclusion reached by George. Although it is not clear what motivated the delegates to adopt the community property system, by passing the section as it

---

42 In the Spanish-Mexican system the wife's share of the community property was not liable for the separate debts of the husband. 1 DeFuniak § 160; Marsh, Marital Property in Conflict of Laws 21 n.27 (1952); 2 Tiffany, Real Property § 441 (3d ed. 1939). However, in an early case the California Supreme Court used common law principles to determine that the community property was liable for the separate debts of the husband. Van Maren v. Johnson, 15 Cal. 308 (1860). Not grasping the true community property principles involved, 1 DeFuniak § 162, at 455-57 (see also Evans, Community Obligations, 10 Calif. L. Rev. 120, 123 (1921)), the court in George turned to the more familiar common law, see 1 Armstrong 432, in order to protect the wife in this situation. See Marsh, Marital Property in Conflict of Laws 20-21 (1952).

In Idaho, the original community property provision that the wife's share of the community property is not liable for the husband's debts is still retained by construing the statute exempting the wife's property from the husband's debts to apply to her half of the community property. Idaho Code Ann. §§ 33-906, 11-204 (1948); see Jacob, Community Property in Idaho 37 (1943). In the Scandinavian countries the rents and profits of the wife's separate property belong to the community, but this particular class of community property is not liable for debts of the husband. Loeb, Legal Property Relations of Married Parties 72 (1900).

43 The use of common law principles to interpret the constitution in George clearly caused a departure from the Spanish-Mexican community property system. 1 DeFuniak § 160; McKay, Community Property § 795 (2d ed. 1925); 2 Tiffany, Real Property § 441 (2d ed. 1939); Clark, New Mexico Community Property Law, in Chamatz & Daggett, Comparative Studies in Community Property 81, 96 (1955); Lobingier, The Marital Community: Its Origin and Diffusion, 14 A.B.A.J. 211, 216 (1928).

Ironically, however, it has been pointed out that the use of the common law in George was not in itself entirely correct. Cal. Jur. Community Property § 39 n.14 (McMurray Supp. 1930). The courts of equity had recognized the rights of married women at an early date, Pomeroy, Equity Jurisprudence 15 (1883); Stewart, Husband and Wife § 464 (1885); 2 Story, Equity Jurisprudence § 1367 (9th ed. 1866), but "at common law, without the intervention of equitable interests and principles, the rents of the wife were absolutely the husband's property, though her real property was her own," Cal. Jur. Community Property § 39 n.14 (McMurray Supp. 1930); and at common law the husband had the right to the present enjoyment of the wife's property, Stewart, op. cit. supra § 464. Thus, the common law could actually have been used to bolster a result more properly reached under the Spanish system, that rents and profits are community property. See 3 Pomeroy, Equity Jurisprudence 29 (1883); Stewart, op. cit. supra § 470; Vernier, American Family Law § 159 (1935); Wells, Separate Property of Married Women 165 (1878); Home, Community Property—A Functional Approach, 24 So. Cal. L. Rev. 42, 45 (1950).

44 Although the court was worried about protecting the wife, it is interesting to note that in the California Constitutional Convention, Mr. Lippitt, arguing for the adoption of the common law, was worried that creditors of the husband would not receive the protection under a community property system that they would under principles of common law. Browne, The Debates in the Convention of California 262 (1850) [hereinafter cited as Browne].

46 During the debates, Secretary of State Halleck of Monterey stated:

I am not wedded either to the Common Law or the Civil Law, nor as yet to a woman . . . . I shall advocate this section in the Constitution, and I would call upon all the bachelors in this convention to vote for it. I do not think we can offer a greater inducement for women of fortune to come to California. It is the very best provision to get us wives that we can introduce into the Constitution.

Browne 259.
was originally proposed the delegates manifested their intention that the community property system should be adopted.47 Later cases seemed to accept this as the intention of the framers.48 Furthermore, even though most of the justices of the California courts were schooled in the common law,49 it was early realized that “our system . . . is borrowed from the civil and Spanish law, and we must look to these sources for . . . the rules and principles which govern its operation and effect.”50 Thus, it seems clear that the words “separate property” in the California constitution were not intended in their common law sense.51

A comparison between the history of the community property system in Texas with that of California may help to clarify the intent of the framers of the California constitution. In 1840 the Texas Congress decided to retain the Spanish community property system which had been in force before they gained their in-

47 Stewart v. Stewart, 199 Cal. 318, 249 Pac. 197 (1926); Dow v. Gould & Curry Silver Mining Co., 31 Cal. 629 (1867); Robbins v. United States, 5 F.2d 690 (1925); 1 DEFUNIAK 51; CAL. JUR. Community Property § 39 n.14 (McMurray Supp. 1930); Kirkwood, supra note 45, at 4; Lobinger, The Marital Community: Its Origin and Diffusion, 14 A.B.A.J. 211, 216 (1928); Loewy, The Spanish Community of Acquests and Gains and Its Adoption and Modification by the State of California, 1 CALIF. L. REV. 32, 33 (1912); McMurray, The Beginnings of the Community Property System in California and the Adoption of the Common Law, 3 CALIF. L. REV. 359, 369–73 (1915); see 1 SCHOULER, MARRIAGE, DIVORCE AND SEPARATION § 298 (6th ed. 1921).

In the convention, Mr. Lippitt, a delegate from San Francisco, proposed an alternative provision to the one adopted. BROWNE 257. This provision would have made it possible to later adopt the common law pertaining to the rights of married persons. Ibid. Mr. Lippitt admitted that he was “wedded to the common law,” and argued that it was “the law under which nine-tenths of the people now in California were born and educated.” Id. at 260. The debate in the convention revolved around the question whether the common or civil law should be adopted as the method for determining the property rights of married persons in California. Racoulut v. Sansevian, 32 Cal. 376, 385 (1867); BROWNE 257–69; 1 DEFUNIAK § 51, at 108; Kirkwood, supra at 3; see Hitchcock, Modern Legislation Touching Marital Property Rights, 6 So. L. REV. N.S. 633, 656 (1880).

The California constitution provision was copied from the constitution of Texas, see note 53 infra; when this provision was written into the Texas constitution the intent of the Texas framers was to adopt the community property system. Huie, The Texas Constitutional Definition of the Wife’s Separate Property, 35 TEXAS L. REV. 1054, 1055 (1957).

48 In Estate of Moffitt, 153 Cal. 359, 363, 95 Pac. 653, 654 (1908), the court said, “it was the design of the constitution of 1849 to preserve . . . to the wives of the inhabitants of the new state . . . the rights to the community property which they had enjoyed under the Mexican rule.” See Stewart v. Stewart, 199 Cal. 318, 249 Pac. 197 (1926); Roberts v. Wehmeier, 191 Cal. 601, 218 Pac. 22 (1923); In re Spencer, 82 Cal. 110, 23 Pac. 37 (1889) (“separate property is a relative term; it implies the existence of the community”).

49 1 ARMSTRONG 432.

51 The decision in George v. Ransom has been widely criticized. BALLINGER §§ 22, 24; 1 DEFUNIAK §§ 71 at 183, 51 at 111; MCKAY, COMMUNITY PROPERTY § 288 (2d ed. 1925); Huie, supra note 47, at 1059; Lobinger, The Marital Community: Its Origin and Diffusion, 14 A.B.A.J. 211, 216 (1928). Making the rents and profits of separate property the separate property of either spouse tends “to emasculate the community property system and further a trend toward a system of separate property in each spouse which may ultimately leave the community property system one in name only.” 1 DEFUNIAK § 72, at 187. Such deviations from the Spanish-Mexican system should be made only after full consideration has been given to the problems which are likely to result. See Hnie, supra at 1059–60; See also BALLINGER § 24; MCKAY, COMMUNITY PROPERTY § 76, at 161 (1st ed. 1910).
dependence, and in 1845 that system was written into the Texas constitution. The California constitutional provision involved in George v. Ransom was copied verbatim from this Texas provision. In 1917 the Texas legislature, following California's lead in George, changed their law to provide that the rents and profits of separate property should remain separate. However, the Supreme Court of Texas, in Arnold v. Leonard, held this statute to be unconstitutional. The court said that the constitution was exclusive; the only property acquired after marriage that could become the separate property of the wife was property acquired by "gift, devise or descent." Thus, the rents and profits of separate property were held to belong to the community.

The decision in George v. Ransom had no effect on the profits of the husband's property because his rights to hold property separately were not guaranteed in the constitution until 1879. The court in Lewis v. Lewis held that the rents and profits of the husband's separate property belonged to the community in accordance with the Act of 1850. In 1872, however, the legislature, influenced by George, made the rents and profits of either spouse the separate property of that spouse. Inasmuch as the statutes of most of the other community property states

62 It has been suggested that the framers of the California constitution similarly intended to place the Spanish system beyond the reach of the legislature. BUTARMT, COMMUNITY PROPERTY LAW 41 (1926); 1 DEFUNIAK § 51. Mr. Burnett takes the position that the constitution recognized rather than adopted the system as existing in California, and the direction to the legislature in the last part of the section was intended to mean that the legislature should define the rights of the wife in the community property in accordance with Mexican Law. There was no authority, however, to change the existing community property system in any way. BURNETT, supra at 40-43. BUTARMT, Seventy-Five Years of California Jurisprudence, 13 Calif. L. states\textsuperscript{68} are modeled on the California code,\textsuperscript{69} the decision in George was thus directly responsible for introducing this novel treatment of the rents and profits of separate property to the American law of community property.\textsuperscript{70}

\textbf{B. Initial Problem of Whether To Apportion}

It having been decided that rents and profits of separate property are not community property, there arose the problem of determining the character of income from a separate property business where one of the spouses actively participated in the business during the marriage period. This problem was not considered in George v. Ransom, since in that case the income produced did not involve the efforts of either spouse.

Just as the court's desire in George to protect the wife's property was responsible for the creation of the problem,\textsuperscript{71} the same motivation influenced the early attempts to solve it.\textsuperscript{72} The first cases arising after George concerned the attempts of an assignee\textsuperscript{73} or creditor of the husband\textsuperscript{74} to reach the profits of the wife's separate property.\textsuperscript{75} The courts, influenced by the desire to protect the rights of women,\textsuperscript{76} took the view that "one object of the [constitutional] provision\textsuperscript{77} was to protect the wife against the improvidence of the husband.\textsuperscript{78} Accordingly, all the income was held to be the separate property of the wife,\textsuperscript{70} thereby protecting what were felt to be her property rights.\textsuperscript{80} In order to reach this result, the courts had to disregard the effort and labor of the husband as factors in the production

\textsuperscript{78} Lewis v. Johns, 24 Cal. 98, 101–02 (1864), quoting from George v. Ransom, 15 Cal. 322 (1860).

\textsuperscript{79} To the same effect were the decisions of the Washington Supreme Court holding that the community derived no interest in the income from a separate property business by reason of the effort and skill of the spouses. See Hester v. Stine, 46 Wash. 469, 90 Pac. 594 (1907); Brookman v. State Ins. Co., 18 Wash. 308, 51 Pac. 395 (1897); Leake v. Hayes, 13 Wash. 213, 43 Pac. 48 (1895); Lesourd, supra note 69, at 22 n.19.

\textsuperscript{80} In Spear v. Ward, 20 Cal. 659 (1862), the creditors of the husband were held not entitled to the products of the wife's separate property farm, even though the wife had executed a crop mortgage in their favor. The court held that the wife was merely a surety for the husband's debt.
of the profits. When cases involving the rents and profits of the husband’s property later arose, the courts, to remain consistent, held the entire proceeds to be his separate property.

The first consideration given to the factor of a spouse’s skill or effort in operating a separately owned business was in the Nevada decision in _Lake v. Bender_.

This case, rather than considering an apportionment, looked at the various factors only to determine whether or not the sum in dispute came within the definition of rents and profits. The court held that where the separate property itself was a more important factor than the skill of the husband in the production of the income from a hotel and ranch, the entire income from the business constituted rents and profits of the separate property. The community was not permitted a share in the profits. _Lake_ differed from previous cases, however, in that it recognized that the skill of the spouses had been instrumental in the production of the income.

Furthermore, the court stated in a dictum that “if profits come mainly from the efforts or skill of one or both, they belong to the community.”

In an article criticizing the _Lake_ case, Professor Pomeroy expressed doubt that the income from a commercial enterprise was intended by the legislature to constitute rents and profits. He also pointed out that the decision in _Lake_ furnished no real test to determine which interest in the property should predominate. This inadequacy was recognized in _Lake_ itself, the court stating that “it may be difficult in a given case to determine the controlling question, owing to the equality of the two elements mentioned, but we know of no other method of determining to whom the profits belong.” Apportionment simply was not considered.

In finding the entire amount to be separate property, the court in _Lake_ found support in cases from common law jurisdictions holding that the profits from a business or farm that were the separate property of the wife could not be reached by the creditors of the husband, even though he had participated in operating the business. Since the common law courts would not allow the creditors to reach the profits on the basis of the husband’s participation, it was analogized that no part of the profits could be allocated to the community on the basis of the husband’s skill and effort.

---

81 The language used in Lewis v. Johns, 24 Cal. 98, 102 (1864), is typical of the court’s attitude: “the husband cannot, by any independent act of his, acquire an interest in the separate estate of the wife.”

82 _Estate of Granniss_, 142 Cal. 1, 75 Pac. 324 (1904); _Estate of Cudworth_, 133 Cal. 462, 65 Pac. 1041 (1901); _Estate of Higgins_, 65 Cal. 407, 4 Pac. 389 (1884). _But cf._ _Estate of Bauer_, 79 Cal. 304, 21 Pac. 759 (1889).

83 _Estate of Cudworth_, supra at 469, 65 Pac. at 1044 (concurring opinion). See Pomeroy, _Husband’s Separate Estate_, 4 West Coast RPR. 193, 195 (1884).

84 In _Lake_, the wife had also worked in the hotel during the entire period of marriage.

85 In earlier California cases it was contended that the effort and skill of the spouses should have the effect of making the profits community property. See, e.g., Lewis v. Johns, 24 Cal. 98, 100 (1864). But the doctrine of George v. Ransom was felt to preclude such a holding. _Id_. at 102.

87 Pomeroy, _supra_ note 82, at 196, suggesting that the husband’s estate be credited with the average rate of interest or the fair rental value in these circumstances.

88 _Id_. at 392.

89 _Id_. at 387.
The Lake case was important in three ways in shaping the early law concerning the disposition of the income from separate property businesses.\textsuperscript{90} First, the case became the accepted authority for the black letter rule\textsuperscript{91} that the profits would be separate property if the predominant factor in their production was the capital, but would be community if the effort of one of the spouses had been more instrumental.\textsuperscript{92} Second, the Lake case pointed up the injustice of allocating the entire profits to either the community or the separate estate.\textsuperscript{93} Perhaps the greatest influence of Lake, however, was in the example the court set by analogizing this community property problem to the common law problem involving creditors of the husband seeking to seize the revenue of the wife's business or farm.\textsuperscript{94} It was the use of similar unsound analogies that led to the creation of the apparent inconsistency between Pereira v. Pereira\textsuperscript{95} and Estate of Pepper.\textsuperscript{96}

Another way in which the courts approached the problem before the idea of apportionment was first crystallized was to consider the income as a commingled fund. The decision of the Supreme Court of Washington in In re Buchanan's Estate\textsuperscript{97} typifies this approach.\textsuperscript{98} The court held the profits of the separate investment to be so commingled with community earnings as to make the income from the business during ten years of marriage entirely community property.\textsuperscript{99}

Although the results differed, the Lake and Buchanan cases were both decided on the principle that the character of the property is determined by deciding which

\textsuperscript{90} Even today remnants of the Lake rule are found in California apportionment cases, in that the relative importance of the capital or the personal services as factors in the production of income may bear on what apportionment is made or whether the entire amount of the profits are allocated to the separate estate. See Estate of Neilson, 57 Cal. 780, 787, 371 P.2d 733, 736, 22 Cal. Rptr. 1, 5 (1962).

\textsuperscript{91} McKay's statement in 6 Am. & Eng. Ency. Law 324 (1898), was particularly influential, as it was frequently cited by counsel as the "rule" of the Lake case. See Respondents Brief, pp. 106-07, Pereira v. Pereira, 156 Cal. 1, 103 Pac. 488 (1909); Appellant's Points and Authorities, pp. 1, 22-23, Estate of Pepper, 158 Cal. 619, 112 Pac. 62 (1910). Despite the fact that the statutes of all the community property states were different, the treatises were all written in generalizations. See, e.g., 21 Cyc. 1648 n.56 (1906).

\textsuperscript{92} McKay also stated the Lake case as a rule in his treatise, McKay, Community Property § 76 (1st ed. 1910), as did Judge Ballinger, Ballinger § 24, and Professor Pomeroy, Digest of Cases, 4 West Coast Rptr. 765, 858 (1884).

\textsuperscript{93} McKay realized that the rule of the Lake case, on its face, confessed an injustice to either the separate estate or the community. McKay, Community Property § 313 (2d ed. 1925).

\textsuperscript{94} In Lake the court said, "most of the cases to which we shall refer upon this question involve [sic] the right of a wife to claim profits arising from the use of her separate estate, as against the creditors of the husband, when they have been increased by his labor and skill." 18 Nev. at 387.

\textsuperscript{95} 155 Cal. 1, 103 Pac. 488 (1909).

\textsuperscript{96} McKay realized that the right of a wife to claim profits arising from the use of her separate estate, as against the creditors of the husband, when they have been increased by his labor and skill." 18 Nev. at 387.

\textsuperscript{97} 158 Cal. 619, 112 Pac. 62 (1910). See text following notes 111 and 183 infra.

\textsuperscript{98} 89 Wash. 172, 154 Pac. 129 (1916).

\textsuperscript{99} Apportionment had been made earlier in Pereira, see text accompanying notes 9-10 supra, but the Washington courts refused to apply this rule, LeSourd, supra note 69, at 25-26. In California, the commingling approach had been used both before Pereira, Estate of Bauer, 79 Cal. 304, 21 Pac. 759 (1889), and after, Estate of Fellows, 106 Cal. App. 681, 289 Pac. 887 (1930).

\textsuperscript{100} 89 Wash. 172, 179-80, 154 Pac. 129, 132 (1916). In finding the income to be community property, the court relied on Lake v. Bender as well as on the line of common law cases, rejected in Lake, that had allowed the creditors to reach the income from the wife's separate property on the basis of the personal service he had devoted to that property. See text accompanying note 89 supra. Compare the use of Glidden v. Taylor, 16 Ohio St. 510 (1866), in Lake v. Bender, 18 Nev. 361, 393 (1884), with its use in In re Buchanan's Estate, 89 Wash. 172, 181, 154 Pac. 129, 132 (1916).
of two factors, the capital or the skill of one of the spouses, was more important in the production of the income. The Nevada court in Lake found that the capital was the primary factor in the production of the profits, whereas the Washington court in Buchanan found the skill of the spouses a more important factor. The importance of the Buchanan case lies in the additional step to the Lake approach, in that once it was found that the profits were primarily community, the concept of commingling was further used to justify holding the entire sum allocable to the community.

II

BEFORE Neilson

A. Pereira v. Pereira

The first decision apportioning profits in a community property state was Pereira v. Pereira. The trial court found that the proceeds from the husband's separately owned cigar store-saloon were all community property. Mr. Pereira appealed, claiming that the entire proceeds should be his separate property because they were the rents and profits of his separate property. This contention was supported by the early California cases that had not considered the skill of either spouse as a factor in the production of income. Mrs. Pereira, relying mainly on the dictum in Lake v. Bender, argued that the entire proceeds should be community property, since the evidence had shown the husband's skill to be the main factor in producing the income. To further support this contention

100 Although the Washington court treated the fund as commingled, the implication was that if the capital invested was more important than the services of the spouse the entire fund would be separate. 89 Wash. 179-81, 154 Pac. 132. The cases relied on in Lake did not allow creditors of the husband to seize the income of the wife's separate property, but the cases relied on in Buchanan allowed the proceeds to be reached in certain circumstances. See notes 118-21 infra.

102 The problem is also analogous to situations where separate and community funds are used to buy land or when community property is used to improve separate property, and vice versa. 4 POWELL, REAL PROPERTY 685 (1954); Comment, 50 CALIF. L. REV. 844 (1962).

103 Opening Brief of Appellant, pp. 30-31.

104 See cases cited note 82 supra.

106 See text accompanying note 86 supra.

107 Brief for Respondent, pp. 102-07.

108 The record includes the following:

Q. Of course that is an enormous profit Mr. Pereira on that amount of money. I suppose it is due to your individual efforts?

A. I judge it is . . .

The Court. Mr. Pereira, it is due to your own efforts you made this money?

A. Yes, sir, hard labor day and night.

Transcript on Appeal, pp. 102-04.
she cited common law decisions involving attempts of the husband's creditors to reach the profits of a business operated by the husband with capital belonging to his wife.\textsuperscript{109}

\textbf{Pereira} was argued by both sides on the assumption that the profits were either entirely community property or entirely separate.\textsuperscript{110} Nevertheless, it was held that unless the contrary could be shown, it must be assumed that the separate property investment was responsible for part of the profits, and that this share would at least amount to the interest rate on a long-term investment, with the remainder being held community property.\textsuperscript{111}

1. \textbf{The Rationale Behind Pereira}

To support the holding that an apportionment should be made, measured by the interest rate on a well secured investment, \textit{Pereira}, like \textit{Lake},\textsuperscript{112} drew analogies from common law creditor cases.\textsuperscript{113} Each of the cases cited had been decided during a period when the recognition of a married woman's right to hold property and transact business in her own name\textsuperscript{114} was new to the common law,\textsuperscript{115} and when there was much confusion in handling the problems created by these new rights.\textsuperscript{116} As a result of such recognition, a debt-ridden husband was afforded an opportunity to run his wife's business while denying his creditors recourse to the business income. The courts thus were confronted with the problem of protecting the wife in accord with the statutes, yet preventing the husband from defrauding his creditors.\textsuperscript{117}

In most instances the income from the wife's business was held to belong to

It appears as though counsel for Mrs. Pereira thought that opposing counsel was arguing for at least some of the earnings to be separate property. Brief for Respondent, p. 117. It would seem, however, that counsel for Mr. Pereira was only claiming that part of the piece of property in question was bought with separate funds other than those earned in the business, and was not seeking a division of the earnings. Opening Brief of Appellant, pp. 31–32.

\textsuperscript{111} The court stated that "in the absence of circumstances showing a different result, it is to be presumed that some of the profits were justly due to the capital invested. There is nothing to show that all of it was due to defendant's efforts alone. The probable contribution of the capital to the income should have been determined from all the circumstances of the case, and, as the business was profitable, it would amount at least to the usual interest on a long investment well secured." 156 Cal. at 7, 103 Pac. at 491.

\textsuperscript{112} See text accompanying notes 89 and 94 supra.

\textsuperscript{114} See \textit{Stewart, Husband and Wife} § 184 (1885). Although a married woman's ability to administer her property was especially restricted by the fact that she could not, at common law, contract in her own name, this restriction was also lifted by statute. See \textit{Anson, Contracts} 234–36 (1939) ; \textit{Whitney, Contracts} § 11, at 10 (1958).

her, notwithstanding the husband's skill and effort involved. In Bogess v. Richards' Adm'r, 39 W.Va. 567, 574, 20 S.E. 599, 602 (1894), the court said:

It has been settled by numerous and repeated decisions that it matters not how much of his labor and skill a man may devote to his wife's property; and, although it may be changed from a rude to a manufactured state, it remains her property still, and can not be levied on by execution or attached for his debts.

Bowen, 53 N.Y. ( Hun.) 631 (1889); Atwood v. Dolan, 34 W.Va. 563, 12 S.E. 688 (1890); 1 Freeman, Executions 566 (3d ed. 1900); Stewart, Husband and Wife § 477 (1885). See also 3 Pomeroy, Equity Jurisprudence 24 (1881).

In cases where the wife did not partake in the fraud, some of the equity courts

118 In Bogess v. Richards' Adm'r, 39 W.Va. 567, 574, 20 S.E. 599, 602 (1894), the court said:

119 See, e.g., Wortman v. Price, 47 Ill. 22 (1869); 1 Schouler, Marriage, Divorce and Separation § 313 (6th ed. 1921); Stewart, Husband and Wife § 469 (1885); Wells, Separate Property Rights of Women 195-96 (1878). The theory of the courts in those instances where the creditors were allowed to seize the profits was either that the husband had attempted to make a fraudulent conveyance of his services to the wife, Bump, Fraudulent Conveyances 263 (4th ed. 1896), that the wife had merely put her money in the husband's business, Annot., 77 Am. St. Rep. 92 (1899), or that the husband had carried on the business in his own name without revealing he was the agent of the wife, Schouler, Domestic Relations § 168 (5th ed. 1895).

120 Bump, Fraudulent Conveyances 262-63 (4th ed. 1896); Schouler, Domestic Relations § 168 (5th ed. 1895); Schouler, Marriage, Divorce and Separation § 313 (6th ed. 1921); Annot., 77 Am. St. Rep. 92, 101 (1899); cf. Glidden v. Taylor, 16 Ohio St. 509 (1866). There was more of a reluctance to find that the product of a wife's farm could be reached by the husband's creditors because of the notion that crops arising naturally from the soil remain separate property. See Lake v. Bender, 18 Nev. 361, 395-400 (1884) (dissenting opinion); Bump, op. cit. supra at §§ 224-25; 1 Freeman, Executions 566 (1900); Annot., 77 Am. St. Rep. 92, 97-100, 100-09 (1899). Some cases distinguished between the situations where the husband rents the farm and where he is the wife's agent. In the latter case the rents and profits cannot be seized. Wells, Separate Property Rights of Married Woman 172 (1878).

121 Bump, Fraudulent Conveyances 262 (4th ed. 1896); 1 Schouler, Marriage, Divorce and Separation § 326 (6th ed. 1921); Stewart, Husband and Wife §§ 129, 311 (1885).

122 Quidort v. Pergueax, 18 N.J. Eq. 472 (1867); see Glidden v. Taylor, 16 Ohio St. 509, 521 (1866). The party responsible for commingling a fund is treated similarly in other branches of the law. See Bogert, Trusts § 100 (3d ed. 1952); Brown, Personal Property §§ 30-36 (1936). In community property states a fund consisting of an uncertain amount of community property and separate property is treated as belonging entirely to the community. See Falk v. Falk, 48 Cal. App. 2d 762, 120 P.2d 720 (1941); note 314 infra. Part of the rationale for this treatment is that the husband has control of community property and where he allows it to become so mixed with his own funds that the amount belonging to the community cannot be determined he must suffer the loss. Pope v. Pope, 102 Cal. App. 2d 353, 227 P.2d 867 (1951); 1 Defuniak § 61.
tried to help her even though they found the transaction to be fraudulent. Two of the cases relied upon in Pereira, were of this nature. In Boggess, the money that constituted the wife’s investment had originally been given to her by the husband before marriage. After the husband became insolvent he used the money to establish a profitable business. In allowing the creditors of the husband to reach these assets the court was strongly motivated by the fraudulent nature of the entire transaction, but since the wife had not taken an active part in the fraud, she was allowed her original investment plus the legal interest rate. The facts in Glidden were very similar, and the court, in effect, found the transaction to be a loan of money from the wife to the husband. By analogy it was held that the wife was a creditor of the husband, and as such, entitled to her original investment plus interest. It was from the suggestions in Glidden and Boggess that the California court probably obtained the method of apportionment used in Pereira. Since the common law courts allowed the creditors to reach the profits of the business as a result of the husband’s skill and talent, the California court reasoned that the community was entitled to the profits for the same reason. Although this was the same type of analogy used in Buchanan, the California court went even further and

123 Schouler, Domestic Relations § 165 (5th ed. 1895); Wells, Separate Property Rights of Married Woman 195–96 (1876); see 2 Story, Equity Jurisprudence §§ 1372a–b (9th ed. 1866).
124 This was the result reached in Glidden v. Taylor, 16 Ohio St. 509 (1886). See text accompanying note 130 infra.
126 16 Ohio St. 510 (1866).
127 One writer warned against relying on Boggess as authority for the proposition that the application of the husband’s services subjected the profits of the wife’s separate property to the creditors of the husband because of the extremely fraudulent nature of the transaction. Free-man, Executions 568–69 (1900). In Deere v. Bonne, 108 Iowa 281, 79 N.W. 59 (1899), the court distinguished Glidden on the grounds that the husband had controlled the wife’s property absolutely.
128 Although the wife was not guilty of any actual fraud, the court found that “her hand be it ever so chaste is polluted by receiving as a gift from her husband the funds which he is endeavoring to fraudulently conceal ... from the searching eyes of his creditors.” Boggess v. Richards, 39 W. Va. 567, 576, 20 S.E. 599, 602 (1894).
129 “The only way that the law furnishes for the ascertainment of how much of this handsom profit is due to the skill and labor of the husband is to deduct therefrom the legal interest on the amount of capital invested.” Ibid.
130 The court recognized that a wife could not be a creditor of the husband at common law, but concluded that, since this was an action in equity to divest her of title, she was entitled to protection. Glidden v. Taylor, 16 Ohio St. 509, 522 (1866). See also 2 Story, Equity Jurisprudence § 1373 (9th ed. 1866).
131 In Trapnell v. Conklyn, 37 W. Va. 242, 16 S.E. 570 (1892), and Penn v. Whitehead, 58 Va. (17 Gratt.) 503, 94 Am. Dec. 478 (1867), it was mentioned that equity would make an apportionment in a proper case, but none was made.
132 The language used by the court in Pereira was the same language that was used in Glidden. It has also been suggested that the Pereira apportionment rule was abstracted from the Boggess case. Evans, Primary Sources of Acquisition of Community Property, 10 Calif. L. Rev. 271, 281 n.78 (1922).
133 In an earlier case the California Supreme Court, recognizing the skill and talent of the husband as a factor in the production of income, found the entire amount to be community property under the rationale that the profits constituted a commingled fund. Estate of Bauer, 79 Cal. 304, 21 Pac. 759 (1889).
134 See notes 99 and 100 supra and accompanying text.
allowed the husband's separate estate the interest on his investment just as the common law court had allowed this to the wife.\textsuperscript{135}

Apart from the lack of any rational basis for interpreting a community property problem by common law principles,\textsuperscript{136} sound reasons appear why the Boggs\textsuperscript{3} and Glidden cases should not have been relied on by the Pereira court. The married women's property acts were a new innovation in the common law,\textsuperscript{137} and the statutes of various states differed.\textsuperscript{138} Cases from one common law state were not sound precedent for another such jurisdiction,\textsuperscript{139} much less for a community property state.\textsuperscript{140} Furthermore, the legal relationships involved were not analogous. In community property states a wife cannot force her spouse to labor,\textsuperscript{141} as neither can creditors in common law states.\textsuperscript{142} If, however, the husband chooses to work, the implications are different. The husband's skill is an asset of the community,\textsuperscript{143} and when he exercises it the resulting product automatically must be considered community property.\textsuperscript{144} In comparison, the common law creditors have no such

\textsuperscript{135} Since the common law courts held that the wife's capital could only be credited with some type of interest rate, and that the creditors could reach the remaining income on the theory that the husband's efforts had produced it, the California court held by analogy that the husband's capital was only entitled to interest, and that the community was entitled to the rest of the profits because they must be similarly treated as the product of his skill.

\textsuperscript{136}\textsuperscript{1} DeFuntak \textsection 51, at 110; see Daggett, The Community Property System of Louisiana 3 (1931).

\textsuperscript{137} See note 115 supra and accompanying text.

\textsuperscript{138} Stewart, Husband and Wife \textsection 464 (1885); Hitchcock, Modern Legislation Touching Marital Property Rights, 6 So. L. Rev. N.S. 633, 634 (1880). In some states the only provision was one entitling the wife to hold property; since these statutes were not construed as giving the authority to trade in her own name, the rents and profits belonged to the husband in the same manner as they had at common law. Stewart, op. cit. supra \textsection 464, 470, 473; Annot., 77 Am. St. Rep. 92, 100 (1899). In some states the law was allowed to trade in her own name with permission of her husband, but, if the arrangement appeared fraudulent, the husband's creditors could reach the profits. Stewart, op. cit. supra \textsection 469.

\textsuperscript{139} Stewart, Husband and Wife \textsection 464 (1885); Annot., 77 Am. St. Rep. 92 (1899). As was the case with community property states, one of the reasons for the confusion in common law jurisdictions was the reliance on treatises and encyclopedias which treated the laws of all jurisdictions without differentiating them. See note 91 supra.

\textsuperscript{140} Inasmuch as the holdings of the four common law cases cited by Pereira were that the creditors of the husband could reach the profits of a business owned by the wife, their use by California courts seems particularly strange; it was the desire to protect the wife against just such creditors that was responsible for the original departure from the Spanish-Mexican system in George, Evans, Primary Sources of Acquisition of Community Property, 10 Calif. L. Rev. 271, 281-82 (1922); see notes 42 and 44 supra. California has expressly rejected the holdings of these common law cases, both before Pereira, see Lewis v. Johns, 24 Cal. 98 (1864), and after, see Gray v. Perlis, 76 Cal. App. 511, 245 Pac. 221 (1926).

\textsuperscript{141} Spreckles v. Spreckles, 172 Cal. 775, 158 Pac. 537 (1916). See also Cal. Civ. Code \textsection 156 (the husband chooses the mode of living).

\textsuperscript{142} In Penn v. Whitehead, 58 Va. (17 Gratt.) 503, 528, 94 Am. Dec. 478, 494 (1867), the court stated: "[T]he law cannot, or does not, compel a man in advance to labor for his creditors." See Bump, Fraudulent Conveyances \textsection 225 (4th ed. 1896); 1 Freeman, Executions 567 (1900).

\textsuperscript{144} 3 Vernier, American Family Laws 214 (1931). But see Gray v. Perlis, 76 Cal. App. 511, 245 Pac. 221 (1926), where the value of the husband's labors in the wife's separate property business were held not reachable by creditors of the community.
lien on the husband's services,\textsuperscript{145} and the husband's earnings are not necessarily subject to their claims.\textsuperscript{146} Thus, the reasons for granting or denying recovery to a creditor in a common law case were not founded upon the same rationale that entitles the community to an interest in the profits under California law.\textsuperscript{147} Still further, the word "apportionment" was not used by the common law courts in the same sense of an attempt to determine the respective shares of the community and the separate estate. As the Glidden case shows, no attempt was made to determine the true relationship between the wife's capital and the husband's services in the production of the income.\textsuperscript{148} The idea of "apportioning" served only to protect the wife from the husband's creditors to whatever extent possible.\textsuperscript{149}

2. The "Rule" of Pereira

Despite its unsound origin\textsuperscript{150} and the vagueness of its terms,\textsuperscript{151} the use in Pereira of "the usual interest on a long investment well secured"\textsuperscript{152} has been taken by many writers to be a rule of law,\textsuperscript{153} and is frequently applied by the courts as a mathematical formula to apportion profits from a separately owned business.\textsuperscript{154} The language used in McDuff v. McDuff\textsuperscript{155} illustrates how the courts have come to regard the Pereira holding:

It has been held that the proper method of determining the value of a husband's interest in a business in which he was engaged at the time of his marriage is to allow the usual interest to the husband on the amount invested on the basis of a long investment, well secured.\textsuperscript{156}

  \item \textsuperscript{145}Abbey v. Deyo, 44 N.Y. 343 (1871); Heckinger v. Swank, 78 Ore. 526, 153 Pac. 784 (1915); 1 Freeman, Executions 565–66 (1900); Annot., 77 Am. St. Rep. 92 (1899); see Annot., 25 A.L.R. 1046, 1048 (1924). See also Gray v. Perls, 76 Cal. App. 511, 245 Pac. 221 (1926).
  \item \textsuperscript{146}"A debtor may therefore bestow his skill and labor upon his wife's estate so far as may he reasonably necessary, without rendering the products liable to his creditors." Bump, Fraudulent Conveyances § 225, at 264 (4th ed. 1896). In Trapnell v. Conklyn, 37 W.Va. 242, 16 S.E. 570 (1892), the court stated that the fact that an insolvent husband voluntarily bestows his labor and skill in the business of farming carried on by his wife upon land which is her separate property, and operated with her separate property, will not, in the absence of fraud, render the products the property of the husband and liable for his debts.
  \item \textsuperscript{147}Another difference is that in common law states where the husband's creditors attempt to seize the income from his wife's separate property, they have the burden of proving that any of the proceeds were earned as a result of the husband's skill, see Commonwealth v. Fletcher, 69 Ky. 171, 172–73 (1869), whereas in community property states the party claiming that the profit was produced by the capital (the separate property) would have the burden of proof, see text following note 279 supra.
  \item \textsuperscript{148}In Glidden, the court admitted that "the property in controversy can, in no just sense, be said to be either the income, increase, or profits of the money given to Mrs. Taylor," but allowed her to share in the profits as a creditor. 16 Ohio St. at 521.
  \item \textsuperscript{149}See Schouler, Domestic Relations § 165 (5th ed. 1895).
  \item \textsuperscript{150}See text following note 136 supra.
  \item \textsuperscript{151}"The terms of this rule, if we may call it such, are so ample, not to say vague, that it scarcely helps us in a case that varies from these facts." Evans, supra note 140, at 282.

  \item \textsuperscript{156}Id. at 178, 191 Pac. at 957.
Some lawyers have even argued that *Pereira* limited the husband to a seven per cent return on his investment, but this contention has been rejected.

The interpretation of the *Pereira* case as having established a "rule" by which the income of every separate property business can be apportioned seems unfounded. The method in *Pereira* was used only as a means to ascertain the least amount to be credited to the husband's separate estate in the absence of other circumstances.

The only "rule" that the court intended to state in *Pereira* was that some apportionment should be made, not that there should be any universally applicable proportion or method of division. In *Estate of Gold*, Justice Shaw, the author of the *Pereira* opinion, stated:

The rules regarding the character of such property were considered in *Pereira v. Pereira* . . . . The principle there stated is that the question what part of the subsequent profits arises from the use of this capital and what part from the personal activity, ability, and capacity of the husband is to be determined by the court from the circumstances appearing in the case, that whatever accrues from the latter sources is community property, and that the remaining profits must be classed as separate estate.

The fact that *Gold* held the entire profit to be community property shows even more clearly that the court did not intend that the particular method used in *Pereira* should be adopted as a formula for the solution of all cases. Moreover, *Gold* indicates that *Pereira* was not meant to require an apportionment in every case.

**B. Estate of Pepper**

The decision in *Estate of Pepper* initiated a line of reasoning that has led to what is generally considered a different rule from that of the *Pereira* case. The supreme court in *Pepper* held the entire proceeds from a nursery business to be separate property, stating:

It is, in the nature of things, impossible to apportion the crop so as to determine what share of it has come from the soil and what share from the exertion of man. The product must be treated as a whole, and, if it is the growth of land separately owned it is separate property of the owner of the land.

---

157 The rate of 7% was not even set by the court in *Pereira*; it was agreed upon by the parties and recognized on rehearing. 156 Cal. at 11, 103 Pac. at 492-93.

158 The taxpayer's argument in *Todd v. McColgan*, 89 Cal. App. 2d 509, 201 P.2d 414 (1949), that the 7% rate of return was a rule of property law, was rejected. See 4 WITKIN, *SUMMARY OF CALIFORNIA LAW* 2726 (7th ed. 1960). A similar contention by this same taxpayer had been previously rejected by a federal court. *Todd v. Commissioner*, 153 F.2d 553, 555 (9th Cir. 1945).

159 See text accompanying note 111 supra.

160 The holding of the *Pereira* case was only that whatever portion of the income is attributable to the capital invested must be considered separate property and whatever portion is attributable to the skill and effort of the husband must be community property. See *Huber v. Huber*, 27 Cal. 2d 784, 167 P.2d 708 (1946).

161 170 Cal. 621, 151 Pac. 12 (1915).

162 *Id.* at 623, 151 Pac. at 13.

163 The fact that no apportionment was made in *Gold*, and that the decision was based on *Pereira*, indicates that the *Gold* court did not view *Pereira* as requiring an apportionment in all cases, let alone that it should be made in a certain way.

164 158 Cal. 619, 112 Pac. 62 (1910).

165 See text following note 190 infra.

166 158 Cal. at 624, 112 Pac. at 64.
It is unfortunate that the court phrased its decision in terms of an inability to apportion. Although it has been this language that has greatly influenced the apportionment cases, it does not appear that the possibility of apportionment was even considered. The case was briefed in much the same manner as Pereira and other early cases, with the husband arguing that the income was all his separate property, and the wife arguing that it belonged exclusively to the community. The basic issue was whether the husband's nursery was a business or a farm, with Mrs. Pepper conceding that if it were a farm the proceeds would be entirely separate. The district court of appeal had decided that the nursery was a business, and, relying on Professor Pomeroy's suggestion, held that the income from a business was not within the meaning of "rents and profits" as used by the legislature in the statute. In reversing, the supreme court took the view that the nursery was more like a farm than a business, and the income was held to be within the statutory definition of rents and profits, thus belonging to the husband's separate estate.

1. Rationale of Pepper

In retrospect, it may appear strange that the court in Pepper did not decide the case in the same manner as Pereira and hold that some apportionment should be made. However, there were several factors existing in 1910 that make it under-

167 See text accompanying notes 192 and 202 infra.
169 See text following note 103 supra.
170 See Appellant's Points and Authorities, pp. 29–41, Respondent's Points and Authorities, pp. 10–23, Applications for Hearing, pp. 27–34, Application for Rehearing, pp. 1–23, Appellant's Answer to Petition for Rehearing, pp. 1–5, Estate of Pepper, 158 Cal. 619, 112 Pac. 62 (1910). The wife's contention, based on Lake v. Bender, was that the husband's skill had been the main factor in producing the income. Reply Brief for Appellant, p. 25.

171 "The question here is whether the proceeds of the nursery conducted on the land can be considered as 'issues' or 'profits' of the land." 158 Cal. at 623, 112 Pac. at 64.

172 Reply Brief for Appellant, pp. 13–15. Before the Pepper case was overruled, it was pointed out that it lacked precedent because Mrs. Pepper had conceded that the crops from a farm would all be separate property. 1 ARMSTRONG 480. This was also mentioned in Estate of Neilson as one of the reasons that Pepper was overruled. 57 A.C. at 739, 22 Cal. Rptr. at 4, 371 P.2d at 748.

174 See note 87 supra. The court quoted from Professor Pomeroy's article, adopting the rationale that the income of a commercial enterprise was not meant to be within the term "rents and profits" as used in the California Civil Code. 8 Cal. App. Dec. at 726, 727.

175 "[I]t is, it seems to us, absolutely clear that it is a business as independent of that of farming or horticulture as the business of selling fruits or vegetables or commodities of any character . . . ." 8 Cal. App. Dec. at 725.

176 The court stated that:

If the crop of grain sown and harvested by the owner of the land constitutes "issues and profits" of the land, we are unable to see why the same may not be said of young trees and plants raised on the land until they are ready for transplanting. There may be cases in which the business is virtually one of purchase and sale of plants, the ground being used merely to preserve the plants until sales can be effected. In such cases it might well be said that the enterprise is so predominantly commercial that the profits are not to be treated as issuing from the land. But on the facts before us, the court below was not bound to [regard the case as coming within this class].

158 Cal. at 624, 112 Pac. at 64–65.
standable why the court did not construe *Pereira* to require consideration of an apportionment.\(^\text{177}\)

The first of these was the notion that since the legislature had provided for rents and profits to remain separate, the owner of the separate property was entitled to devote at least enough time to his property as it would take to make it valuable.\(^\text{178}\) This was considered "ordinary use" of the property.\(^\text{179}\) In *Estate of Cudworth*,\(^\text{180}\) one of the early California cases preceding *Pereira*,\(^\text{181}\) the money that

\[^{177}\text{Although it is important to understand the Pepper decision in light of the prevailing attitude of the period in which it was decided, see text following note 178 infra, the decision was incorrect in several respects, apart from the concession of counsel, see note 172 supra. In the first place, the Pepper decision has no basis in its supporting authorities. The only case relied on for the proposition that the proceeds of a farm are separate property was Diefendorff v. Hopkins, 95 Cal. 343, 28 Pac. 265, aff'd per curiam, 30 Pac. 549 (1892), a case that is easily distinguished. In Diefendorff the plaintiff, claiming to be a purchaser from the husband, sued a sheriff of the City and County of San Francisco for conversion of the furniture of a boarding house. The sheriff had attached the furniture at the request of the wife's creditors. Plaintiff's case was based on the theory that the attachment was improper because the property belonged to the husband. The court held on two alternate theories that the furniture was the separate property of the wife. The furniture was purchased either with money which Mr. Rix gave to his wife, or with the proceeds from the boarding house which was the separate property of the wife. In the first instance the furniture would constitute an outright gift to the wife and thus be her separate property; in the second, the furniture would be the wife's separate property on the grounds that the husband had made an implied gift to Mrs. Rix by allowing her to keep and manage these earnings. At best, the case is authority only for the proposition that a husband who allows his wife to manage her own earnings will be held to have made a gift of them to her.}

\[^{178}\text{Even more fault can be found with the Pepper decision on the ground that the court seemingly failed to follow the very principles expressed within its opinion. It was recognized that:}

\[^{179}\text{There may be cases in which the business is virtually one of purchase and sale of plants, the ground being used merely to preserve the plants until sale can be effected. In such cases, it might well be said that the enterprise is so predominantly commercial that the profits are not to be treated as issuing from the land.}

158 Cal. at 624, 112 Pac. at 64-65. The uncontradicted testimony elicited at the trial, however, shows that Mr. Pepper's practice was to import trees from foreign countries and eastern states in the winter, have them grafted, budded, and tended by his employees for a little over a year and place them for sale the following spring. Each year he issued price lists. For quite some time he sold the trees from a store in Petaluma, California. See *Estate of Pepper*, 8 Cal. App. Dec. 720, 725 (1909).

\[^{180}\text{Although the Pepper court seemed unwilling to distinguish a nursery and a farm because of the differing degrees of individual skill connected with the management of each, it was willing to distinguish the nursery from a business "virtually one of purchase and sale of plants" apparently because of the length of time the plants were held before being offered for sale. This distinction appears to be based even more on a matter of degree than the one the court refused to make.}

\[^{181}\text{It would seem that there was ample evidence to find that the business prospered primarily from Mr. Pepper's efforts during marriage since the nursery was run for fifteen or sixteen years before marriage at a very small return. *Estate of Pepper*, 8 Cal. App. Dec. 720, 722 (1909).}

[^McKAY, Community Property 161 (1st ed. 1910).]

[^In Diefendorff v. Hopkins, 95 Cal. 343, 28 Pac. 265, aff'd per curiam, 30 Pac. 549 (1892), the court held that the profits of the wife's separate property boarding house were her separate property notwithstanding the fact that some part of this income was attributable to her efforts. The court reasoned that personal labor would be involved in the production of all rents, issues, and profits in some degree but this was no reason to alter the holding that the profits were separate. See LeSourd, Community Property Status of Income from Business Involving Personal Services and Separate Capital, 22 Wash. L. Rev. & St. B.J. 19, 22 (1948); note 177 supra.]

[^133 Cal. 462, 65 Pac. 1041 (1901).]

[^See also cases cited note 82 supra.]
the husband had earned from making investments with his separate capital was held not to belong to the community.\textsuperscript{182} The court reasoned that "those profits ... which have arisen naturally and without the active engagement by the husband of his capital in some business or employment" were separate property.\textsuperscript{183}

The second factor that caused the Pepper court to feel that Pereira was not binding was the notion that crops grown on land are the natural product of the soil and necessarily arise from the ordinary use of the property. This notion seems to have been borrowed from the common law cases dealing with the attempts of a husband’s creditors to reach the profits of the wife’s separate property where the husband had devoted his time and skill to producing these profits. In Lake v. Bender,\textsuperscript{184} which first used these cases,\textsuperscript{185} the dissent pointed out that the principle of not allotting any part of the income to the ability of the husband was applicable to cases where the accumulations of property were derived from conducting and carrying on the farming business, and other business of like character . . . [because] the ownership of a farm necessarily carries with it the right to the products grown thereon.\textsuperscript{186}

The influence of the cases discussed by the dissent in Lake seems to have caused the Pepper court to draw a distinction between a farm and a business. The products of a farm were viewed as necessarily following from the ordinary use of land, whereas the profit from a business may or may not result from ordinary use, depending on the circumstances of the individual case.

It was a combination of these factors that was responsible for the Pepper decision. The court in Pepper undoubtedly felt that all the income from a farm issued "naturally" from the soil, notwithstanding the fact that a certain amount of labor was necessary in its production, and that all income arising naturally constituted rents and profits, thus belonging to the owner of the separate property under Civil Code sections 162 and 163.\textsuperscript{187}

2. Pepper and Pereira Reconciled

In light of the fact that the “apportionment rule” of Pereira v. Pereira was formulated by a resort to the same line of common law creditor cases considered in the dissent in Lake,\textsuperscript{188} Pereira may be viewed as being consistent with Pepper. Arguably, the court in Pereira decided that the income from the husband’s business did not constitute rents and profits since it did not issue from the ordinary use of his property.\textsuperscript{189} Because the income from Mr. Pereira’s business in no way involved a product of the soil, the court could have decided whether such profits arose from the ordinary use of the property under the facts of the case. There not

\textsuperscript{182} The notion that the owner of property must be given its beneficial use was one of the reasons for holding that the rents and profits of the wife's separate property must be considered separate property in George v. Ransom, 15 Cal. 322 (1860). See Boyd v. Oser, 23 Cal. 2d 613, 145 P.2d 312 (1944).
\textsuperscript{183} 133 Cal. at 468, 65 Pac. at 1044.
\textsuperscript{184} 18 Nev. 361, 4 Pac. 711 (1884), discussed in text following note 83 supra.
\textsuperscript{185} See note 94 supra and accompanying text.
\textsuperscript{186} 18 Nev. at 396, 4 Pac. at 731-32; see Lake v. Bender, 18 Nev. 361, 395-400, 4 Pac. 711, 731-36 (1884) (dissenting opinion).
\textsuperscript{187} See note 1 supra.
\textsuperscript{188} Note 186 supra; see text following note 124 supra.
\textsuperscript{189} It appears that a large part of the profits may have been attributable to the gambling done by Mr. Pereira in his saloon. See Transcript on Appeal, pp. 81-85, Pereira v. Pereira, 156 Cal. 1, 103 Pac. 488 (1909).
being "ordinary use," the husband would then have been entitled only to the interest rate on the capital he had invested as if he had loaned it to the community to operate the business. Had the court desired to apportion in Pepper, they could have easily relied on Pereira, and found that the profits belonged to the community, except for the separate property's fair rental value.100

C. Van Camp v. Van Camp

The Pepper case had its greatest impact through its use in Van Camp v. Van Camp.101 In this case, the husband was the controlling shareholder of a large incorporated business, and devoted his efforts exclusively to the management of the business. During the marriage he received a total of $141,000 as dividends on his stock in the corporation, and a total of $90,000 as salary which the evidence established as reasonable for the services he performed. The court found that although the salary belonged to the community, all the dividends were the husband's separate property. The court relied on Pepper for the proposition that where no apportionment of business income can be made the entire amount should be considered separate property.102 Thus, since the court felt that it was impossible to determine what part of the dividends accrued from the skill of the husband, and what part from factors attributable only to the business,103 the whole amount was held to be separate property.104

The reliance on Pepper would seem unjustified. Pepper clearly indicated that its holding was restricted to situations involving products of the soil, and distinguished the situation where the profits take the form of business profits.105 Con-

100 This was the result reached by the court in Laughlin v. Laughlin, 49 N.M. 20, 155 P.2d 1010 (1944), where the court rejected the Pepper case and applied the Pereira "rule" to a farm.

101 53 Cal. App. 17, 199 Pac. 885 (1921).

102 The court stated that "the case presented is not unlike that involved in Estate of Pepper . . . wherein it was held that the profits and earnings [were] his separate property, notwithstanding the success of the venture required industry, skill, and attention." 53 Cal. App. at 28, 199 Pac. at 889.

103 After citing Pepper, the court in Van Camp said:

So, in the instant case, it is impossible to say what part of the enormous dividends paid by the Van Camp Sea Food Company should be apportioned to the skill and management thereof and what part should be apportioned to the investment of the capital and the favorable conditions under which the business was conducted.

53 Cal. App. at 28, 199 Pac. at 889.

104 The confusion that would result from an application of the Pepper reasoning to a commercial enterprise was recognized by the counsel for Mrs. Van Camp, who argued before the Supreme Court that

whatever may be determined of the corporate character of the appellant's business, the Estate of Pepper cannot be applied in this action as an authority, without confusing the law relating to the question of community property rights in the state of California, and if the principles which have heretofore been marked out by these two decisions are to be adhered to, the case of Pereira v. Pereira must be given controlling force.

105 It was recognized in Pepper that there may be cases in which the business is virtually one of purchase and sale of plants, the ground being used merely to preserve the plants until sales can be effected [and] in such cases it might well be said that the enterprise is so predominantly commercial that the profits are not to be treated as issuing from the land.

158 Cal. at 624, 112 Pac. at 64-65. See BURBUTT & PATTY, SELECTED PROBLEMS IN COMMUNITY PROPERTY AND DOMESTIC RELATIONS 13 (1948); 3 MERTENS, INCOME TAX § 19.38 n.49 (1957).
cerning the latter situation, Pepper acknowledged that such profits would not necessarily be considered as arising from the "ordinary use of the separately held property," indicating that they should be subjected to apportionment insofar as it was required by Pereira.

1. The Van Camp "Method"

As happened with Pereira, the decision in Van Camp has been extended beyond the context in which it was decided. In Huber v. Huber, the California Supreme Court first approved the "method" used in Van Camp, stating that a proper apportionment is to take what the evidence establishes as being the reasonable value of the spouse's services as the full amount of the community interest, with the remainder all being separate property. The community interest in Huber was found to be $7,200, which the husband's accountant testified was the reasonable value of the husband's services, although the husband had taken a total of $14,400 in salary or drawing.

The rule in Huber was not required by the Van Camp decision. Van Camp did not hold that the community interest was limited to the amount established by the evidence as the reasonable value of the spouse's services. It indicated only that business profits not capable of being apportioned must belong to the spouse owning the business. Van Camp did not hold that all business profits are necessarily not apportionable.

196 As with Pereira, see text following note 150 supra, the Van Camp case has been taken as establishing a method of apportionment. In Gilmore v. Gilmore, 45 Cal. 2d 142, 149–50, 287 P.2d 769, 773 (1955), the court said: "It has frequently been held that a proper method of making such allocation is to deduct from the total earnings of the business the value of the husband's services to it. The remainder, if any, represents the earnings attributable to the separate property invested in the business." See Harold v. Harold, 43 Cal. 2d 77, 271 P.2d 489 (1954); Huber v. Huber, 27 Cal. 2d 784, 167 P.2d 708 (1946); Belmont v. Behnont, 188 Cal. App. 2d 33, 10 Cal. Rptr. 227 (1961); Mears v. Mears, 180 Cal. App. 2d 484, 4 Cal. Rptr. 618 (1960); Tassi v. Tassi, 160 Cal. App. 2d 680, 325 P.2d 872 (1958); Logan v. Forster, 114 Cal. App. 2d 587, 250 P.2d 730 (1952); Cozzi v. Cozzi, 81 Cal. App. 2d 229, 183 P.2d 739 (1947); Gump v. Commissioner, 124 F.2d 540 (1941).

198 See 1 ARMSTRONG 478.

199 Some courts have even taken the view that the Van Camp "method" limits the community to the actual salary that the husband draws. In Seligman v. Seligman, 85 Cal. App. 683, 687, 259 Pac. 984, 986 (1927), the court stated: "Not the profits of the business, but only the earnings of the plaintiff from his individual efforts, or what might be called his salary or wages, would be community property." See Shea v. Commissioner, 81 F.2d 937, 939 (1936); Horne, Community Property—A Functional Approach, 24 So. Cal. L. Rev. 42, 53 (1950); Comment, 1 So. Cal. L. Rev. 161, 162–63 (1927).

The New Mexico courts rejected the Pepper decision in Laughlin v. Laughlin, 49 N.M. 20, 155 P.2d 1010 (1944), but adopted the Van Camp "method" in Katson v. Katson, 43 N.M. 214, 89 P.2d 524 (1939), and found that the community was limited to the salary. See Comment, 36 Texas L. Rev. 187, 193–94 (1957).

200 Thus, the Huber case put to rest the contention that the Van Camp "method" limited the community to the actual salary of the husband. See Tassi v. Tassi, 160 Cal. App. 2d 680, 325 P.2d 872 (1958); note 199 supra.

201 See notes 192–93 supra and accompanying text.

202 In the sense that the Van Camp case held that the salary was community but that all the dividends were separate, the case can be taken as a combination of Pepper and Pereira. See VERRALL, CASES ON CALIFORNIA COMMUNITY PROPERTY 118 (1960); EVANS, PRIMARY SOURCES OF ACQUISITION OF COMMUNITY PROPERTY, 10 CALIF. L. REV. 271, 282 (1922); Note, 14 CALIF. L. REV. 402, 404 n.15 (1926).
Whether there still exists a sound basis for using the Van Camp “method” depends on the effect of Estate of Neilson in overruling Pepper, since the latter case was relied on in the Van Camp decision.

2. The Problem of Increase

In Gilmore v. Gilmore, the Van Camp “method” was used to apportion the increased value or appreciation of the husband’s separately owned business. Professor Burby suggests that it was unwise to consider the increase in a business in the same manner as its profits, apparently arguing that the appreciated value of separate property should belong to the community. This contention could be supported on the basis that Civil Code sections 162 and 163, the provisions defining separate property, do not include the increased value of separate property, and that the residual definition of community property would thus apply to the increase, making it community property. Furthermore, since the statutes of other states include increase in their definitions of separate property, it could be argued that the Legislature of California, by omitting the mention of increase from their definition, intended increases to belong to the community.

These arguments, however, overlook the fact that the increase of separate property remained separate under the original Spanish-Mexican laws. Even states like Texas, which continue to classify the rents and profits of separate property as belonging to the community, classify the increase as separate. As stated by the Washington court in Guye v. Guye, "since by the statute the spouse owning separate property is entitled to the rents, issues and profits thereof, so such owner must be entitled to the natural increase in value, as such increase is as much the issue of such property as would be the rents derived therefrom.”

---

203 See note 272 and text accompanying note 273 infra.
204 See text accompanying note 192 supra.
206 In Gilmore the wife contended that the increase in value of the husband’s three incorporated auto dealerships from $182,010.46 to $786,045.52 should be partially allocated to the community. The court, however, applied the Van Camp “method” and held that the salary or drawings of the husband had been adequate compensation for his services; thus, the entire amount of increase was apportioned as his separate estate.
208 CAL. CIV. CODE §§ 162, 163. See note 1 supra.
209 CAL. CIV. CODE § 687: “Community property is property acquired by husband and wife, or either, during marriage, when not acquired as the separate property of either.” See Dow v. Gould & Curry Silver Mining Co., 31 Cal. 629 (1867); CAL. CIV. CODE § 164. See also Estate of Gold, 170 Cal. 621, 151 Pac. 12 (1915); 2 TIFFANY, REAL PROPERTY § 439 (3d ed. 1939); Evans, Ownership of Community Property, 35 HARV. L. REV. 47 (1921). 213 63 Wash. 340, 115 Pac. 731 (1911).
214 Id. at 348, 115 Pac. at 734. Recently the California Supreme Court recognized that “any increase in the value of the land attributable to plaintiff’s [husband’s] efforts was also community property.” Mayhood v. LaRosa, 58 A.C. 510, 512, 374 P.2d 805, 806, 24 Cal. Rptr. 837 (1962).
Since the increased value of a business may in part be attributed to what is in effect a reinvestment of the profits, it is difficult to distinguish rationally the profits of a business from its increase. Thus, if the skill and efforts of a spouse are at least in part responsible for the increase, the increase resulting from such efforts would seem allocable to the community in the same manner as business profits.215

D. The Tax Formula

Because of the divergence in approach, the results reached under the Pereira "rule" and Van Camp "method" are at opposite extremes. In any given case, if the apportionment were first to be made in accordance with the Pereira interest rate formula, and then separately computed in the manner indicated by Van Camp, part of the total income may remain unallocated to either.216

Recognizing this hiatus in the results of the Pereira "rule" and Van Camp "method," Professor Burby217 and Professor Moynihan218 have suggested that the formula applied in tax cases be used as a compromise.219 This "tax formula" involves first computing both the fair rate of return of the separate capital invested in the business, and the value of the services rendered.220 The ratio of the value of the services is then taken to the total of the fair rate of return and such value of services, with the ratio being multiplied times the total profits in dispute to establish the share of the community. The share of the separate estate is determined by taking the ratio of the fair rate of return to the same denominator as above, and again multiplying times the total profits.221 This tax formula is actually a means of dividing the difference between the value the courts place on the services and the rate of return given the capital.222 The fact that a difference exists

---

216 If, in a hypothetical case, the husband had $100,000 invested in his separate property business which earned $38,000 a year, and from which he drew a salary of $12,000, the amount given the separate estate will vary greatly depending on which method of apportionment is used. If the Pereira method is used, the court would apply a rate of about 7% and find that $7,000 was separate property and $31,000 was community property. If the court were to apply the Van Camp rule, they would probably find that his salary was the reasonable value of his services, and $12,000 would be held to be community property with the remaining $24,000 going to his separate estate. Thus if the husband was given $7,000 by applying Pereira, and the community given $12,000 under Van Camp, there would remain $19,000 unallocated to either.

217 Burby, Cases on Community Property 91 (2d ed. 1955).

220 In this sense the "tax formula" appears to be based on the idea that there are two different methods for making the apportionment. See Comment, 21 So. Cal. L. Rev. 447, 450 n.9 (1948).

221 Thus, if the husband has $100,000 invested in his restaurant business which he owned at the time of marriage, assume that 7% would be a fair rate of return on capital, that $12,000 would be a reasonable salary, and that the net income was $38,000. The separate property portion would be $7,000 (7% of $100,000) divided by $19,000 (total of fair return and reasonable salary), multiplied by $38,000 (the earnings for the year), or $14,000. The community share would be $12,000 divided by $19,000 times $38,000, or $24,000.

222 If the fair return on capital plus the reasonable value of services rendered equaled the income, there would be no need to apply the ratio. In the illustration in note 221 supra, if the net income was $19,000 instead of $38,000 an application of the ratio would result in a finding that $7,000 was separate property and $12,000 was community property.
cannot logically be the basis of a solution to the problem, but rather points out that the two methods upon which the tax formula is based are arbitrary.

Consequently, the tax formula itself cannot help but yield an arbitrary result.

In addition to being arbitrary, the use of the "tax formula" in federal tax cases would also seem unjustified. The tax laws specify that property is to be classified according to the law of the state in which it is located. Inasmuch as the formula had never been used by a California court prior to its appearance in the tax case, its use in the federal courts appears improper; these courts should have determined whether income was community or separate in accordance with the appportionment methods previously used in California civil cases. Moreover, the courts of the Ninth Circuit, in applying this "formula," do not take into account the basic presumption of the community property system that all property acquired after marriage belongs to the community. Rather, they presume that the Commissioner has correctly determined the tax, thereby placing upon the taxpayer, who is normally trying to show that more community property exists, the burden of showing the character of the property.

224 If either the Pereira rule or the Van Camp method were accurate ways to assess the value of the separate estate, the amounts yielded by their application should equal the profits of the business. That is, if Pereira had furnished a method to determine accurately the separate property interest, and if Van Camp had set down a rule by which the community's contribution could be properly determined, their application in any given case would yield consistent results. But see note 216 supra.

225 See Kizer, supra note 223, at 10-12.

227 Although the tax formula has been used in a California tax case, Todd v. McColgan, 89 Cal. App. 2d 509, 201 F.2d 414 (1949), it had been used many times by the federal courts before it had been adopted in California. E.g., Todd v. Commissioner, 153 F.2d 553 (9th Cir. 1945).

228 It has been suggested that the application of the "tax formula" violates the policy of Erie v. Tompkins, 304 U.S. 64 (1938). See Kizer, Community Interest in Commingled Income, Derived from Personal Service and Separate Capital—Another View, 23 Wash. L. Rev. & St. B.J. 8, 15-16 (1948). It would not seem, however, that the Erie doctrine is applicable. See generally Hart & Wechsler, The Federal Courts and the Federal System 633-36 (1953); Lowndes & Hazard, Cases on Pleading and Procedure 1271-76 (1962).

229 This apparently was realized in the first bulletin covering the income from a separate property business. See IV-2 Cum. Bull. 125 (1925), Lawrence Oliver, 4 T.C. 684 (1945). Liability under the federal estate tax is determined in accordance with local law. See Lowndes & Kramer, Federal Estate and Gift Taxes 250 (2d ed. 1962).

230 The presumption is recognized by the Fifth Circuit in tax cases. See McFadden v. Commissioner, 148 F.2d 570 (5th Cir. 1945); Howard v. United States, 125 F.2d 986 (5th Cir. 1942). The presumptions are also followed in determining liability for the federal estate tax. See J. G. Sweeney, 15 B.T.A. 1287, 1392 (1929); Lowndes & Kramer, Federal Estate and Gift Taxes 240-42 (1st ed. 1956).

231 See, e.g., Shea v. Commissioner, 81 F.2d 937 (9th Cir. 1936).

233 See Kizer, supra note 232, at 14-16.
E. Each Case Decided on its Facts

The proposed use of the tax formula could be supported by language in several cases that the apportionment question is a factual one to be decided in each case by the trier of fact in any manner deemed equitable.\textsuperscript{224} Treating the apportionment of income solely as a question of fact seems to be regarded by deFuniak as the only solution to the problem of apportionment.\textsuperscript{235} Indeed, the language used in \textit{Estate of Gold}\textsuperscript{236} could be taken to indicate that the "rule" intended by \textit{Pereira} was only that each case must be decided in light of all the circumstances.\textsuperscript{237} Nevertheless, the construction given to \textit{Pereira} by the later cases, including \textit{Estate of Neilson},\textsuperscript{238} suggests that the California Supreme Court would not presently support an unrestrained rule of apportionment.\textsuperscript{239}

Several difficulties confront deFuniak's suggestion to allow the trier of fact to make the apportionment as a purely factual matter. With no guides for handling the problem, none of the confusion in selecting from the various rules would be cleared up, and the inconsistent \textit{Pereira} and \textit{Van Camp} approaches would continue to be applied at random. Furthermore, deFuniak's approach would give practically unlimited discretion to the trial judge in deciding the character of the property. Admittedly, discretion in a trial court is desirable in many instances, but in apportionment cases the trial judge may be prone to view the fault of the parties in determining which property belongs to the community. In the past, the fault of the parties seems to have had a great deal of effect on the results reached in a given case. It is possible, for example, that the favorable apportionment given the wife in \textit{Pereira v. Pereira} was made because of the extremely cruel conduct of the husband;\textsuperscript{240} the failure in \textit{Estate of Pepper} to find any community property for the wife to share could be explained by the fact that the wife had destroyed all the records kept by Mr. Pepper and offered no explanation for her actions.\textsuperscript{241} Similarly, it has been suggested that the apportionment made in \textit{Van Camp v. Van Camp}...
was influenced by the court’s attitude toward the wife, whom it viewed as a gold digger.\textsuperscript{242} It thus appears that the courts are susceptible to confusing their discretion in \textit{dividing} the community property\textsuperscript{243} with the decision of what property \textit{is} community property.\textsuperscript{244}

### III

**APPORTIONMENT AFTER Neilson**

Although neither \textit{Van Camp v. Van Camp} nor \textit{Pereira v. Pereira} were intended to promulgate methods of apportionment,\textsuperscript{245} the subsequent cases proceeded along diverging lines of approach based on these two decisions.\textsuperscript{246} While there was authority that an apportionment could be made in either manner,\textsuperscript{247} most commentators considered the \textit{Van Camp} and \textit{Pereira} methods to be inconsistent.\textsuperscript{248} In any event, it was impossible to predict which approach would be used by the courts in any given situation.\textsuperscript{249}

In \textit{Estate of Neilson},\textsuperscript{250} the wife, having been disinherited by her husband, exercised her election to take half of the community property against the will.\textsuperscript{251} The trial court refused to give an instruction proposed by the heirs of the husband’s estate to the effect that the income from the husband’s farm was all his separate property even though the husband devoted his efforts to running the farm during marriage. The trial court stated “that the rule of \textit{Estate of Pepper} has been ‘practically wrecked’ by subsequent cases.”\textsuperscript{252} In affirming, the Supreme Court of California expressly overruled \textit{Pepper}, stating that an apportionment must be made whenever one of the spouses has earned money by combining his skill with the use of a separate asset, regardless of whether the revenue has been earned through a business, farm,\textsuperscript{253} or constant reinvestment\textsuperscript{254} of separate capital.
Having decided that an apportionment must be made, Justice Traynor stated that the usual method of making such an apportionment is in accordance with the rule of Pereira.\footnote{57} A departure from Pereira, according to Justice Traynor, should be made only when the husband can show that his capital is entitled to a greater return.\footnote{58} This showing can be established by proof that there were unusually large profits and increases in other businesses of the same type;\footnote{59} that the spouse did not take an active part in the control of the business;\footnote{60} that there has been a general increase in population and economic growth in the community;\footnote{61} or that the business requires a large sum of capital.\footnote{62}

the husband conducts a commercial enterprise but also when he invests separate funds in real estate or securities." \textit{Id.} at 740, 22 Cal. Rptr. at 5. Although the language used might indicate that this was settled law, there had been much confusion whether investing in securities and real estate was a business and came within the rules relating to apportionment. 1 CALIFORNIA FAMILY LAWYER § 4.23 (Cont. Ed. Bar 1961); LeSourd, \textit{Community Property Status of Income From Business Involving Personal Services and Separate Capital}, 22 WASH. L. REV. & ST. B.J. 19, 24–25 (1947).

\footnote{57}The language that Pereira is the "usual method" was first used in Randolph v. Randolph, 118 Cal. App. 2d 584, 258 P.2d 547 (1953), although similar language was used earlier in Stice v. Stice, 81 Cal. App. 2d 792, 185 P.2d 402 (1947). While no citation was given for the language in Randolph, it is interesting to note that the language appears to have originated in 3 CAL. JUR. 554 (Ten Yr. Supp. 1936). See Brief for Respondent, pp. 6–7, Randolph v. Randolph, 118 Cal. App. 2d 584, 258 P.2d 547 (1953).

\footnote{58}In Neilson, the court quoted from Randolph to the effect that: "'Only when the profits and accruals actually attributable to the separate property are proved to differ from [the usual interest rate for a well secured investment] ... is there reason to depart from this system.'" 57 Cal. 2d at 740, 22 Cal. Rptr. at 5.

\footnote{62}57 Cal. 2d at 740, 22 Cal. Rptr. at 5, citing Huber v. Huber, 27 Cal. 2d 784, 167 P.2d 708 (1946). Other cases have shown that if the inactive spouse can prove that the capital was not an important factor, and that the profits are due almost entirely to the skill and ability of the active spouse, the entire profit would be community. Austin v. Austin, 190 Cal. App. 2d 45, 11 Cal. Rptr. 593 (1961); Estate of Fellows, 106 Cal. App. 681, 289 Pac. 887 (1930); cf. Estate of Gold, 170 Cal. 621, 151 Pac. 12 (1915).

Under the Neilson decision, there can be an allocation of the entire proceeds and increment only when they are attributable solely to the natural enhancement of the property, 57 Cal. 2d at 740, 22 Cal. Rptr. at 5, citing Estate of Cudworth, 133 Cal. 462, 65 Pac. 1041 (1901); McDuff v. McDuff, 48 Cal. App. 175, 191 Pac. 957 (1920), or when the husband expended only minimal effort and the wife introduced no evidence attributing a value to his services, 57 Cal. 2d at 740, 22 Cal. Rptr. at 5, citing Cozzi v. Cozzi, 81 Cal. App. 2d 229, 183 P.2d 739 (1947); Estate of Barnes, 128 Cal. App. 489, 17 P.2d 1046 (1932). See discussion in text following note 282 infra. See also Estate of Heltcel, 200 Cal. App. 2d 398, 19 Cal. Rptr. 352 (1962).

In New Mexico there is no apportionment made if the increase is due to the natural enhancement of the property. \textit{CLARE, COMMUNITY OF PROPERTY AND THE FAMILY IN NEW MEXICO} 19 (1956).
From the unhesitating manner in which the Pereira method was applied, it would appear that little confusion had ever existed. However, Justice Traynor's straightforward application of the Pereira rule as the usual method is surprising in view of his prior opinion in Gilmore v. Gilmore. In the latter opinion, he stated that the Pereira rule was applicable "only in the absence of other circumstances"; the trial court's use of the Van Camp method was held sustained by the evidence. Although the language of Gilmore taken literally might appear consistent with Neilson, the differing emphasis in the two cases would seem to suggest that a change has occurred in the supreme court's attitude towards apportionment. The language in Gilmore indicated that the Van Camp method was preferred, and that Pereira was more of an exception. In fact, the Gilmore decision prompted Professor Marsh to write that "the Supreme Court in Gilmore in effect overruled Pereira. . . ." Thus, although Neilson has dispelled any thought that Pereira is overruled, the extent to which it is now to be applied is still uncertain.

The decision in Neilson purports only to reiterate what the proper method of apportionment is; it does this by citing previous apportionment cases with approval. Justice Traynor's opinion, however, is the first decision by any California court to consider all the relevant cases in stating the manner for making an apportionment, and he has in effect woven the old cases into a new pattern. In the past, the courts generally have either relied on the Van Camp line of cases without considering the Pereira method, or conversely have used Pereira without mention of Van Camp. Neilson makes no comment on the apparent inconsistency of the two approaches, but rather makes Pereira the starting point of an apportionment problem, with the criteria used in cases applying Van Camp serving in some manner to modify the result reached with Pereira.

Justice Traynor lists several criteria for determining when Pereira may be departed from, but he fails to state what is to be done once the departure is made. Since the cases cited as illustrative of the criteria for departure all use the Van Camp approach, it is possible that Justice Traynor intended a complete departure from Pereira to the Van Camp method once the relevant criteria are established. However, a departure from Pereira need not entail a complete switch to Van Camp. In keeping with the use of Pereira as the usual method under

---

262 Id. at 150, 287 P.2d at 774.
263 See text following note 196 supra.
264 Application of Pereira only "in the absence of other circumstances," as suggested by Gilmore, is not necessarily inconsistent with the use of Pereira as the "usual method" under Neilson, particularly in view of the "other circumstances" mentioned by Neilson as reasons for departing from Pereira. See text following note 256 supra. But whether a departure from Pereira under the Neilson framework calls for application of Van Camp is unclear. See text following note 269 infra. If Van Camp may still be applied, then Gilmore and Neilson are at least to some extent consistent. See note 272 infra.
266 See cases cited in notes 256-60 supra. In Gilmore v. Gilmore, 45 Cal. 2d 142, 150, 287 P.2d 769, 774 (1955), Justice Traynor attempted to reconcile the Pereira and Van Camp rules, but he did not list the factors that called for a departure from Pereira.
268 See, e.g., Estate of Arstén, 56 Cal. 2d 239, 14 Cal. Rptr. 809 (1961).
269 See text at notes 257-60 supra.
270 See notes 257-60 supra.
271 This would make the Gilmore and Neilson decisions more readily reconcilable. See note 264 supra.
the renewed emphasis of Neilson, the various factors, if established, could be used only to modify the rate of return on the separate investment. The Pereira approach of first establishing a reasonable return for the separate estate could be basically adhered to, with the relevant factors then bearing only on what is the return.\textsuperscript{272}

Since it still is not clear when the Pereira or Van Camp methods are to be applied, even though Pereira is now preferred as the "usual method,"\textsuperscript{273} it is important to analyze in what respects these methods differ. This will assist in deciding if and when it would be desirable to switch from Pereira to Van Camp under the framework set forth in Neilson. In theory, the two methods can be reconciled as differing only in approach, with the Van Camp method inquiring what the probable contribution of the spouse's efforts were in earning the income, while Pereira inquires what was the probable contribution of the capital.\textsuperscript{274} If both approaches achieved their intended goals, it would not be particularly important which method was used.

In practice, however, an application of Van Camp can yield a result different

\textsuperscript{272} Since Neilson stated that "the long line of cases starting with Pereira dispels any notion that such impossibility [of apportionment] justifies a finding that none of the proceeds belongs to the community," 57 Cal. 2d at 741, 22 Cal. Rptr. at 5, a question remains whether the Van Camp "method" can still properly be used in California. As noted heretofore, see text following note 191 supra, the decision in Van Camp was based on the language in the Pepper case that where profits cannot be apportioned they must be considered as rents and profits of separate property, and, as such, allocated to the separate estate. Now that Pepper has been overruled, it would appear that the foundation of the Van Camp decision has been destroyed and that the holding of that case is itself no longer valid. However, the Van Camp case has been misconstrued and has been understood to stand for an apportionment method not actually put forth by the opinion. See text following note 196 supra. Inasmuch as this method has become an accepted part of California jurisprudence through its use in cases not relying on the Van Camp decision, see, e.g., Huber v. Huber, 27 Cal. 2d 784, 167 P.2d 708 (1946), it is doubtful that Neilson has rejected the Van Camp "method," although the case itself may no longer be good law. By failing to explain how an apportionment should be made when a departure from Pereira is indicated, see text following note 269 supra, Neilson has left room for dispute concerning the propriety of using Van Camp.

\textsuperscript{273} Neilson reversed the decision of the lower court on the ground that the jury had misinterpreted the trial court's instruction relating to the transmutation of the husband's separate property into community property. 57 Cal. 2d at 743, 22 Cal. Rptr. at 7. Although the Supreme Court considered the evidence in order to aid the trial court on remand on the issue of transmutation, id. at 743-46, 22 Cal. Rptr. at 7-9, it failed to make any comment on the evidence with regard to the issue of apportionment. The husband's heirs had argued that the income during the marriage was attributable primarily to the natural enhancement of the husband's separately owned property, apart from any reliance on Pepper. Appellant's Reply Brief, p. 11, Estate of Neilson, 181 Cal. App. 2d 769, 4 Cal. Rptr. 542 (1961). They further urged the Gilmore case as precluding the application of Pereira. Appellant's Reply Brief, pp. 11-14. The wife on the other hand urged the Pereira rule, arguing that gifts by the husband more than accounted for the value of the separate estate as determined under Pereira, relying on White v. White, 26 Cal. App. 2d 524, 79 P.2d 759 (1933), for the proposition that any gifts made by the husband would be presumed to have been made out of his own separate property. Respondent's Brief, p. 23, Respondent's Answer to Appellants' Petition for a Hearing by the Supreme Court, pp. 20-23. Neilson thus clearly presented the clash between Van Camp and Pereira, and it is unfortunate that the situation was not used to elaborate further on the application of these diverse approaches.

\textsuperscript{274} The holding in Pereira was restricted to what the minimum amount of separate property would be. See note 160 supra and accompanying text. This was apparently realized in Estate of McCarthy, 127 Cal. App. 80, 15 P.2d 223 (1932), where the court stated:

In determining what portion of such profits is community property, while it must be presumed in the absence of evidence that some thereof were due to the capital
from one reached upon application of\textit{Pereira}.\textsuperscript{275} As the\textit{Gilmore}\textsuperscript{276} case shows, courts applying the \textit{Van Camp} method are prone to accept the testimony of the husband or his accountant that his salary accurately reflects his value to the business. Similarly, the \textit{Huber}\textsuperscript{277} court limited the community to the amount testified to by the husband's accountant as being reasonable compensation for his services, even though the husband had drawn twice that amount from the business.\textsuperscript{278} Perhaps the courts give controlling weight to this testimony of the husband because the \textit{Van Camp} approach does not produce other evidence for the courts to consider. As a practical matter, an application of \textit{Van Camp} cannot give effect to the basic presumption that all property acquired during marriage is community\textsuperscript{279} and still produce enough evidence for the trier of fact to make an accurate determination. The basic presumption places the risk of nonpersuasion as well as the burden of going forward upon the party who is asserting that the property is separate.\textsuperscript{280}
If, however, this risk is to be placed on the husband under the *Van Camp* method, he could meet his burden of going forward by having his accountant testify as to the reasonable value of his services. Because *Van Camp* defines the issue in terms of valuing the husband's skill, this would be direct evidence on the issue, and may strongly influence a decision in the husband's favor, particularly in the absence of any further evidence. The husband's evidence should not, however, negate the basic presumption favoring the community, and the wife should be able to win without introducing any evidence. Nevertheless, the courts usually give controlling weight to the husband's evidence under the *Van Camp* method.281 The wife is, in effect, forced either to come forth with additional evidence tending to limit the return on the separate investment, or to gamble that the husband's evidence will not be conclusive.

The foregoing analysis may not be consistent with a part of the *Neilson* opinion wherein Justice Traynor states:

> The proceeds and increment in value are apportioned entirely to the husband's estate only when they are attributable solely to the natural enhancement of the property . . . or when the husband expended only minimal effort and the *wife introduced no evidence attributing a value to his services.*282

But, the last twelve words of this passage are inconsistent with another part of the opinion in which it is said to be incumbent upon the owner of a business to prove that it is making a higher rate of return than the usual interest rate.283 Justice Traynor thus seems to acknowledge that some burden rests on the party who is asserting that the property is separate.284 While the husband may introduce evidence that a higher return is justified, this should not place a burden of persuasion on the wife to establish what portion of the profits are community property. The quoted language should be taken to mean only that the establishment of certain facts by the husband shifts the burden of going forward to the wife, and not the burden of persuasion. However, *Cozzi v. Cozzi*285 and *Estate of Barnes*,286 the two cases *Neilson* relies on for this language, held that the wife must bear the risk of proving that some part of the profits were community. Neither *Cozzi* nor *Barnes* considered the presumption that all property acquired after marriage is community.

Because *Pereira* as the usual method requires the husband to prove any greater than normal value of his capital, the basic presumption of community property can be more readily adhered to. Evidence as to the value of the husband's services does not now go directly to the issue, and is less likely to be taken by the courts as conclusive. Thus, under *Pereira*, the husband is induced to come forth with more evidence, and is required to prove with greater particularity the value of his

---

281 See text following note 276 *supra*.
282 57 Cal. 2d at 740, 22 Cal. Rptr. at 5. (Emphasis added.)
283 In *Neilson*, Justice Traynor stated that, "Departures from the *Pereira* formula have been made when the husband introduced evidence that 'a larger return on his capital had in fact been realized.'" 57 Cal. 2d at 740, 22 Cal. Rptr. at 5, citing *Gilmore v. Gilmore*, 45 Cal. 2d 142, 150, 287 P.2d 769, 774 (1955).
284 With *Pereira* being the usual method under *Neilson*, the husband, notwithstanding any evidentiary burden, may get some return on his separate investment even without introducing any evidence. *But see* text following note 292 *infra*. The burden possibly placed on the husband by *Neilson* relates only to his receiving a larger than usual return. See note 283 *supra*.
separate estate in the production of the income. 287

Difficulties may arise from the use of Pereira as the usual method unless previous limitations in its application are eliminated. Some cases have used the original language of Pereira and determined that the "usual interest on a long investment well secured" should be allocated to the separate property. 288 Other decisions have determined that the Pereira method consists of allowing the legal interest rate. 289 Neither of these two rates is very closely related to practical reality. The use of the rate on a well secured investment does not give consideration to the risk factor, which is of primary importance in determining the return on any investment. 290 The separate capital in the husband's business is an equity investment rather than a loan, and is unsecured rather than "well secured." 291 Similarly, the use of the legal interest rate ignores the possibility that the husband may have made a better or worse than average investment. It would seem that the amount to be attributed to the separate investment should be the usual rate of return on investments in similar enterprises operating in generally the same environment.

The relatively narrow and limited interpretation given to the Pereira approach in the past has worked injustice in two respects. Where a large sum of money is in dispute, allocation to the separate estate of a conservative rate of return does not adequately reward the investment, and the community gets more than a reasonable value for the spouse's efforts. On the other hand, where the business has been only a marginally successful or losing investment, the community suffers. These problems arise because the difference between Pereira and Van Camp has been taken as bearing upon which interest, the separate estate or the community, is to be credited or paid first. It was thought that the Van Camp method called for subtracting the community interest first, with the remainder being considered separate property. 292 Pereira was taken to require the separate estate to be credited first, with anything remaining being allocated to the community. 293 Under this

287 The Neilson decision does not, however, make clear how such evidence is to be used. See note 273 and text following note 269 supra. The evidence produced may require a switch to the Van Camp approach, see text at note 270 supra, or may be used only to modify the return to be given the separate investment while staying within the framework of Pereira, see text following notes 271 supra and 301 infra.

Further reasons may also suggest preference for the Pereira approach. An apportionment in terms of the fair rate of return on the separate capital may be more suitable for an accurate determination, since there are usually businesses similarly situated that can be used as guides in establishing the share attributable to the capital. Also, evidence is available as to the earning value of various types of invested funds. See DUN & BRADSTREET, INC., HOW DOES YOUR BUSINESS COMPARE WITH OTHERS IN YOUR LINE? (1960); 13 MAIL-ME-MONDAY BAROMETER OF SMALL BUSINESS, YEARBOOK (1961). In comparison, figures on which to value the husband's efforts would not seem as accurate. The skill and abilities required to operate a business are numerous and varied, and aside from the case of ministerial positions different people can rarely be said to possess the same degree of capability. See note 323 infra. Even the value of the husband's ability as measured by job offers or previous employment may have little bearing on his value to the particular business in question. See note 324 infra.

291 Ibid.

293 See Evans, Primary Sources of Acquisition of Community Property, 10 CALIF. L. REV. 271, 282 (1922).
latter interpretation of *Pereira*, in a marginally successful or losing business where the entire profit is about the same or less than the arbitrary return given on the investment, there would be little or nothing left for the community after payment to the separate estate.\(^{294}\) The *Pereira* case clearly did not intend such a result. This was shown in *Estate of Gold*.\(^{295}\) Where Justice Shaw, who also wrote the *Pereira* opinion, interpreted it as holding that "whatever accrues from the personal activity, ability, and capacity of the husband is community property and the remaining profits must be classed as separate estate."\(^{296}\) Fundamental accounting and good business practice would seem to uphold this language in *Gold*, since labor expenses must be first satisfied before any profit or return on capital can be declared.\(^{297}\) If the husband had chosen not to run the business himself, he would have had to pay wages to a manager before any profit was realized on his separate investment.\(^{298}\) Therefore, in view of *Gold*, the *Pereira* method should not be used to give an arbitrary return to the separate estate to the detriment of the community interest.\(^{299}\) Similarly, there appears to be no reason why it should act arbitrarily to the detriment of the separate investment when a large rather than small sum is in dispute.

In *Neilson*, Justice Traynor seemed to recognize the inadequacy of using either the legal interest rate or the rate on a long-term investment, as he stated the *Pereira* rule as calling for a "fair rate of return."\(^{300}\) If this language is taken literally, rather than being understood as calling for one of the rates used in past cases, a proper result could be reached. Evidence relating to the value of the husband's services, the returns on similar business investments, as well as the several factors set forth in *Neilson*, could be used to determine what rate of return would be the "fair" value of the capital. If this were done, and the husband was actually given

A logical basis for the framework would seem to be the basic presumption that

\(^{294}\) See McDuff v. McDuff, 48 Cal. App. 175, 191 Pac. 957 (1920). See also Note, 14 Calif. L. Rev. 402, 404 nn.16-17 (1926); Evans, Primary Sources of Acquisition of Community Property, 10 Calif. L. Rev. 271, 282 (1922).

*Courts using the Van Camp method often conclude that no community property exists by holding that where the expenses are greater than the income, the community has earned nothing. See, e.g., Huber v. Huber, 27 Cal. 2d 784, 167 P.2d 708 (1946). The rationale for this holding is a presumption that all expenses were paid out of community property. Kenney v. Kenney, 128 Cal. App. 2d 128, 274 P.2d 951 (1954); see Estate of Ades, 81 Cal. App. 2d 334, 184 P.2d 1 (1947). This presumption has arisen out of the statement in Estate of Cudworth, 133 Cal. 462, 65 Pac. 1041 (1901), that there is no presumption that the husband paid the expenses out of his own separate property. It would seem that saying there is no presumption that such debts are paid out of separate property is not support for a finding that there is a presumption that such debts were paid from community funds. See Respondant's Brief, p. 290, Van Camp v. Van Camp, 53 Cal. App. 17, 199 Pac. 385 (1921).\(^{295}\)

\(^{296}\) Id. at 623, 151 Pac. at 13. (Emphasis added.)

\(^{298}\) Comment, 14 Calif. L. Rev. 402, 404 n.17 (1926).

\(^{299}\) Moreover, since the community must bear the loss of any debts contracted by the husband if his business is losing money, see Schuyler v. Broughton, 70 Cal. 282, 11 Pac. 719 (1886), it would appear just that the separate property bear the expense of paying for the services of the husband. See Evans, Primary Sources of Acquisition of Community Property, 10 Calif. L. Rev. 271, 282-83 (1922); Comment, 14 Calif. L. Rev. 402 (1926).

\(^{300}\) "The usual method of apportionment is to allocate a fair return on the investment to the separate property. . . ." Estate of Neilson, 57 Cal. 2d 733, 740, 22 Cal. Rptr. 1, 5 (1962).
a fair return, it would then not matter which interest was subtracted first. It would appear that this is the only way an apportionment can be made under the *Pereira* approach while adhering to its correct interpretation as stated in *Gold*.301

Any problems remaining after the *Neilson* decision will exist because two basically conflicting methods of apportionment continue to be used. By setting up *Pereira* as the usual method, *Neilson* may have provided the groundwork for resolving this conflict. Nevertheless, the failure to indicate when and if *Pereira* must yield to *Van Camp* leaves room for the confusion of the past to project itself into the future. If a satisfactory method of apportionment is to be established, it must at least be recognized that past cases have been decided along two separate lines of analysis. A choice can then be made as to which is more suitable, or perhaps a decision can be made to establish another approach not bound up with any of the previous approaches.

IV

A SUGGESTED SOLUTION

A. Evidentiary and Procedural Framework

The problems of apportionment cases may vary with the size and nature of the business, the extent of the spouses’ participation, the business climate, and other factors. Since no rigid formula could do justice in every fact situation, a more reasonable approach would seem to consist of a broad framework within which the various facts all may be considered. This framework should determine the issue presented, the party having the burden of proof, and the type of evidence to be considered.302

301 See text at note 296 supra.

302 Although the *Neilson* decision and much of the discussion following hereinafter are written in terms of a business belonging to and operated by the husband, it should be clear that the principles discussed are equally applicable to cases involving a separate property business owned and operated by the wife. While there are cases holding that a husband allowing his wife to run her own business makes an implied gift of her earnings by allowing her to control them, Diefendorff v. Hopkins, 95 Cal. 343, 30 Pac. 549 (1892); Smith v. Smith, 47 Cal. App. 650, 191 Pac. 60 (1920), this result probably would not apply after 1951 as the wife now is given the right to control and manage the “community property money earned by her,” in CAL. CIV. CODE § 171c. Two other situations to be treated similarly to the two already mentioned are where the husband operates the wife’s separate business, and where the wife operates the husband’s business. In Lewis v. Johns, 24 Cal. 98 (1864), an early case involving a business owned by the wife but run by the husband, the principle was established that a husband could obtain no interest in the property of the wife by any act of his own. See Lencioni v. Fidelity Trust & Sav. Bank, 95 Cal. App. 490, 273 Pac. 103 (1928); Gray v. Perlis, 76 Cal. App. 511, 245 Pac. 221 (1926). *But see* Pacific-Southwest Trust & Sav. Bank v. Ross, 81 Cal. App. 204, 253 Pac. 351 (1927). This principle was probably founded on the same reasoning that motivated the court in *George v. Ransom*. See notes 42 and 44 supra. It would seem clear at present, however, that the earnings attributable to the husband’s skill are community property, regardless of whether they are earned by operating his separate property business or that of his wife. But, where it appears that the husband worked in the wife’s business without expecting any compensation, it would be proper to hold that the husband had made a gift of his services to the wife, Gray v. Perlis, 76 Cal. App. 511, 245 Pac. 221 (1926). This conclusion is supported by the fact that the husband has control of the community assets, CAL. CIV. CODE §§ 172, 172a, which include the value of his own skill and labor. Under the provisions of CAL. CIV. CODE § 171c, it would seem that the wife similarly could make a gift of her services to her husband’s separate business.
all property obtained during marriage is community property. This presumption is fundamental to the community property system, and was a part of the system as it existed under early Spanish law. When applied to apportionment, the presumption should place on the owner of the separate property both the burden of persuasion and of going forward to show what portion of the profits are not to be allocated to the community.

The use of the basic presumption in cases involving the classification of profits from a separate property business has been considered previously. But the courts have not followed through with a sound application of the presumption, and often have confused it. In Estate of Pepper, although the court's analysis began with

303 See note 270 supra.
304 Wilson v. Wilson, 76 Cal. App. 2d 119, 172 P.2d 568 (1946). The presumption is said to be founded upon the likelihood that any property acquired by a spouse during marriage would be community property. 1 DeFUNIAK § 60, at 140. The presumption is also based on the greater precision with which separate property is defined. Horne, Community Property—A Functional Approach, 24 So. Cal. L. Rev. 42, 52 (1950). See also Evans, The Ownership of Community Property, 35 Harv. L. Rev. 47 (1921). One purpose of the presumption is that it resolves doubts in favor of the community as against questionable claims of separate ownership by third parties and individual spouses. Robbins, Community Property Laws 16 (1940); see Clark, Community of Property and the Family in New Mexico 20 (1956).
305 Myer v. Kinzer, 12 Cal. 247, 252-54 (1859); Falk v. Falk, 48 Cal. App. 2d 762, 120 P.2d 714 (1941); Ballinger § 43; Mechem, Progress of the Law in Washington Community Property, 7 Wash. L. Rev. 367, 370 (1933); PomEROY, Community Property, 4 West Coast Repr. 357, 358 (1884); Note, 4 Texas L. Rev. 362 (1926); see Fennell v. Drinkhouse, 131 Cal. 447, 63 Pac. 734 (1901); Estate of Boody, 113 Cal. 682, 45 Pac. 858 (1896); Wynn v. Wynn, 170 Cal. App. 2d 484, 338 P.2d 930 (1959); Kenney v. Kenney, 128 Cal. App. 2d 128, 274 P.2d 951 (1955); 1 DeFUNIAK § 60, at 140-41. But see Lenninger v. Lenninger, 167 Cal. 297, 139 Pac. 679 (1914).

Insofar as the presumption fixes the burden of persuasion it is more accurately stated as a law determining the character of property than as a rule of evidence. Nilson v. Sarment, 153 Cal. 524, 96 Pac. 315 (1908); Jordan v. Fay, 98 Cal. 264, 33 Pac. 95 (1892); McFadden v. Commissioner, 148 F.2d 570 (5th Cir. 1945); MCKAY, Community Property § 250 (1st ed. 1910); see Clark, Presumptions in New Mexico Community Property Law: The California Influence, 25 So. Cal. L. Rev. 149, 163 (1925). See generally 1 DeFUNIAK § 60. The basic presumption should be given added force by the California doctrine that presumptions themselves are to be treated as evidence. 1 Jones, Evidence § 117 (5th ed. 1958); 2 StANBURY, California Trial and Appellate Practice § 1024 (1958); see Jolly v. Raa, 196 Cal. 547, 238 Pac. 353 (1925); cf. Thompson v. Davis, 172 Cal. 491, 157 Pac. 595 (1916). See generally 9 Wigmore, Evidence § 2490 (3d ed. 1940).

307 In Lake v. Bender, 18 Nev. 361, 384 (1884), where the entire profit was found to belong to the husband's separate estate, the court stated: "It is conceded that property acquired during coverture presumably belongs to the community. The burden is on the defendant [husband] in this case to overthrow this presumption, by proof sufficiently clear and satisfactory, to convince the court and jury of the correctness of his claim, as in other cases."

308 It has been held that the presumption could be overcome only by "clear and convincing" evidence, Bauer v. Garrett, 79 Cal. 304, 21 Pac. 759 (1889); Thomasset v. Thomasset, 122 Cal. App. 2d 116, 264 P.2d 626 (1953); McBaine, California Evidence Manual § 1294 (2d ed. 1960); Platt, Property Rights of Married Women § 14, at 19 (1885), but that "absolute certainty" was not required, Estate of Pepper, 158 Cal. 619, 112 Pac. 62 (1910); Wirz v. Wirz, 96 Cal. App. 2d 171, 214 P.2d 839 (1950). Such language should be taken to mean only that the presumption must be overcome by a preponderance of the evidence. Simonson v. Los Angeles Trust & Sav. Bank, 205 Cal. 252, 270 Pac. 672 (1928); Freese v. Hibernia Sav. & Loan Soc'y, 139 Cal. 392, 73 Pac. 172 (1903); Wirz v. Wirz, 96 Cal. App. 2d 171,
the presumption, once the husband traced the property to his separately owned business, the court held that the presumption was rebutted completely.\textsuperscript{300} The soundness of such analysis is questionable. The fact that the husband traces the property to income from his separate investment should not, by itself, overcome the presumption and thereby place the burden of persuasion on the wife who is asserting the property to be separate.

To illustrate a more logical application of the basic presumption, it is useful to view the various steps of proof that are considered in a trial. Initially, the party asserting that the property belongs to the community must establish that the property was acquired after marriage,\textsuperscript{310} since there is no presumption to this effect regarding property held by a married person.\textsuperscript{311} With this much shown, however, the entire value of the property should be presumed to belong to the community.\textsuperscript{312} If it is further established that the property was derived from a separate investment, the property, in the absence of a showing of labor contributions of a spouse, all should be considered separate under the rule of George v. Ransom.\textsuperscript{313} However, if it also is shown that one of the spouses has contributed his efforts to operating the business, the basic presumption should subsist, thereby leaving the burden of persuasion on the party asserting the property to be separate. The use of the presumption in this manner is supported by the community property doctrine relating to commingled funds,\textsuperscript{314} since the property in dispute derives from a commingling of the profits of the separate capital with the value of the community owned

\textsuperscript{300} Estate of Pepper, 158 Cal. 619, 622-23, 112 Pac. 62, 63-64 (1910).

\textsuperscript{310} In a divorce case the community property becomes an issue if the plaintiff lists in the complaint the property that is contended to belong to the community. 2 \textsc{willin}, \textsc{california} \textsc{procedure} \S 437 (1954); see 2 \textsc{chadbourn, grossman, \& van altstine, \textsc{california} \textsc{pleading} \S 1042 (1961).

\textsuperscript{311} Fidelity & Cas. Co. v. Mahoney, 71 Cal. App. 2d 65, 161 P.2d 944 (1945). \textit{But cf.} Jolly v. Rea, 196 Cal. 547, 555, 238 Pac. 353, 356 (1925), where the court stated that any property existing "at the close of a long marital relation" is presumed to be community property. There were, however, inferences to support a finding that the property was acquired after marriage.

\textsuperscript{312} See \textsc{verrall, cases \& materials on \textsc{california} community property} 118-19 (1960); see Austin v. Austin, 190 Cal. App. 2d 45, 11 Cal. Rptr. 593 (1961). See also Kenney v. Kenney, 128 Cal. App. 2d 128, 274 P.2d 951 (1954).

\textsuperscript{313} 15 Cal. 322 (1860); \textsc{verrall, cases \& materials on \textsc{california} community property} 118 (1960); see Gudelj v. Gudelj, 41 Cal. 2d 302, 210, 259 P.2d 656, 661 (1953). See Estate of Boyd, 119 Cal. 402, 51 Pac. 634 (1897), where the court stated that the presumption of community property is rebutted and overcome by proof that the property was acquired by the ordinary use of his separate property.

\textsuperscript{314} In community property states, a presumption exists that a commingled fund belongs entirely to the community. 1 \textsc{defuNia}s \S 61. If a portion of the fund can be traced to separate property, it will be characterized as separate property. Belmont v. Belmont, 188 Cal. App. 2d 33, 10 Cal. Rptr. 227 (1961); Garten v. Garten, 140 Cal. App. 2d 489, 295 P.2d 23 (1956); Kenney v. Kenney, 128 Cal. App. 2d 128, 274 P.2d 951 (1954); see Wynn v. Wynn, 170 Cal. App. 2d 484, 338 P.2d 930 (1959). But where the fund cannot be traced it is all conclusively presumed to be community property. Falk v. Falk, 48 Cal. App. 2d 762, 120 P.2d 714 (1941). This presumption can also only be overcome by a preponderance of the evidence. See Gibson v. Gibson, 126 Cal. App. 2d 534, 272 P.2d 807 (1954).
Also, it has been held that profits from a separately owned business are all community property unless the separate investment was shown to be a factor in producing the income.\(^\text{316}\)

Under the foregoing framework the issue is clearly defined to be the determination of the portion of the profits attributable to the separate investment. The burden of persuasion rests on the party asserting some portion to be separate, and failure to carry this burden results in the whole amount being allocated to the community. This approach is not particularly harsh on the spouse owning the separate business, however, since he still is entitled to whatever portion of the profits the evidence supports as being attributable to the separate investment. Moreover, the burden of producing evidence\(^\text{317}\) is placed on the party most able to do so,\(^\text{318}\) since the owner of the business should be in the best position to establish those factors important in evaluating the investment.

Unlike the Van Camp approach, consideration of the evidence would not be limited to a narrow factual determination.\(^\text{319}\) Various types of evidence could be considered, with each bearing on the issue for whatever weight it might carry. For example, evidence of profits in similar industries could be shown.\(^\text{320}\) Goodwill shown to have been established by the owner of the separate business before marriage could be considered as a part of the capital investment.\(^\text{321}\) Direct evidence may be introduced regarding the value of the spouse's services to the business.\(^\text{322}\)

\(^\text{315}\) The California Supreme Court considered the profit from a separate property business as a commingled fund before the turn of the century. Estate of Bauer, 79 Cal. 304, 21 Pac. 759 (1889); see Estate of Fellows, 106 Cal. App. 681, 289 Pac. 887 (1930).

\(^\text{317}\) See note 306 supra.

\(^\text{318}\) See Wilson v. Wilson, 76 Cal. App. 2d 119, 172 P.2d 568 (1946); McKAY, COMMUNITY PROPERTY § 210 (2d ed. 1925); Ganong, Community Property and Presumptions, 28 Ore. L. Rev. 157, 167 (1949). This is one of the recognized reasons for the existence of presumptions, MORGAN & MAGUIRE, CASES AND MATERIALS ON EVIDENCE 88–90 (2d ed. 1942); see McCormick, Evidence § 309, at 643 (1954); cf. Maguire, Evidence of Guilt 100 n.9 (1959); Prosser, Torts § 42, at 209–10 (2d ed. 1955). See also Ramsdell v. Fuller, 28 Cal. 37 (1865). See generally Morgan, Techniques in the Use of Presumptions, 24 Iowa L. Rev. 413, 416 (1939); Morgan, Presumption, 12 Wash. L. Rev. 255, 257–59 (1937); Morgan, Some Observations Concerning Presumptions, 44 Harv. L. Rev. 906, 924–31 (1931).

\(^\text{319}\) See text following note 276 supra.

\(^\text{320}\) See note 287 supra.

\(^\text{321}\) Where a spouse has operated his separate business prior to marriage, he owns not only the tangible capital assets of the business, but also the goodwill or earning potential he has established. But when a man enters marriage and brings with him a certain amount of previously acquired skill, the monetary returns obtained through the use of this skill belong to the community. In Thomasset v. Thomasset, 122 Cal. App. 2d 116, 264 P.2d 626 (1953), the husband, a lawyer, tried to establish that the earnings from his practice were due in part to the goodwill he had built up during the years prior to marriage. The husband argued for an apportionment of the income, even though he had to work to account for all of it. Apparently, the only evidence introduced by the husband to substantiate his theory consisted of salaries paid to attorneys employed by the county and city. The court ruled such evidence irrelevant, thus leaving nothing of the apportionment theory based on the husband's goodwill investment. It would seem, however, that relevant evidence could have been introduced concerning goodwill by showing, for example, how many of the husband's clients during marriage were established prior to marriage. Some reasonable percentage of the fees received from such clients could then be attributed to the goodwill, with this percentage being apportioned to the husband's separate estate.

\(^\text{322}\) This would be the only type of evidence to be considered under the Van Camp approach. See text following note 276 supra.
which might include job offers made to the spouse during marriage or salaries earned in employment other than with the separate business. Testimony regarding the salary of other persons in similar job positions, or of the cost to hire another person to run the separate business, could also be considered. The size and nature of the business may also bear on the value of the spouse's efforts to the business. Evidence could be shown relating to the general business climate. Similarly, general rises in land values are relevant where there has been appreciation with little or no improvement to the land in question.

As countering evidence in behalf of the community, it might be shown that the business was not capable of being run successfully without the owner-spouse's efforts. Also, evidence of the type described above could tend to minimize or eliminate any return on the investment, as for example a showing that the particular industry has not been profitable.

This suggested framework does not differ greatly from the apportionment method established by Neilson. Most significantly, if Pereira is the usual method it still is possible for the holder of the separate investment to gain some portion of the profits without introducing any evidence bearing on the issue of apportionment. He may be entitled to a fair return so long as the property in dispute is traced to the separate investment. In comparison, under the above analysis an apportionment to the separate property interest would be made only upon evidence supporting a finding that the separate investment was partially responsible for the profits. Without such evidence everything would be community property under the basic presumption. Nevertheless, depending on how the various factors set forth in Neilson are to be used in modifying Pereira, the Neilson approach may closely approximate results under the suggested framework. If such factors are used only to modify the "fair return" under Pereira, rather than switching to a Van Camp inquiry, the burden in effect is placed on the holder of the separate

---

323 This might be less reliable evidence because it would establish directly only the worth of the person whose salary is shown.
324 For example, while the spouse may have a yearly earning capacity of $25,000 in relation to possible employment as a corporate executive, the value of his productive capacity to the separate business is likely to be a lesser figure where such business is a neighborhood grocery store which is not able to fully utilize the spouse's ability. This raises the issue of whether the community is entitled to the value of the husband's services determined apart from their value to the business in which the husband is working. Since the husband can choose the mode of living for the community, Cal. Civ. Code § 103, he is able to choose to work in a position where he is less valuable to his employer than in another position, and this should hold true even if he chooses to work in his own separately owned business. This situation should be distinguished from that of a losing business, where the husband may be valuable to the business even though it is not realizing any overall profit. See text following note 330 infra.
327 If, for example, the husband's personal contact with consumers was necessary, this would indicate that the profits were dependent on his efforts. On the other hand, if the husband's duties were primarily ministerial, it would indicate that his duties could have been readily assumed by someone else.
328 This does not mean that the separate investment always will be entitled to some return under the Pereira rule. In the case of the losing or marginally successful business, an apportionment to the separate estate might not be made if it would be to the detriment of the community. See text following note 292 supra.

investment to show what portion of the profits are attributable to his investment. If *Pereira* is completely abandoned under *Neilson*, then the results are likely to differ more drastically from those of the suggested framework, much in the same manner as they would from a strictly *Pereira* analysis.

**B. The Losing Business**

A decrease in the value of a separate property business should be treated in generally the same way as an increase. The first impression in such cases, however, might be that the entire value of an investment that has declined is all separate property. This notion is perhaps based on the misconception that the *Pereira* rule always entitles the capital to some rate of return. It has already been shown, however, that *Pereira* should not require allocation to the capital to the detriment of the community.

The community is entitled to the value of the spouse's efforts, and this is not altered when the service is rendered to a losing cause.

Suppose that *H* and *W*, after five years of marriage, are obtaining a divorce, and the only property in question is a business that *H* owned before marriage and continued to operate during the five year period. *W* has been employed elsewhere, and her earnings have been used for the general expenses of the family. At the time of marriage *H*'s business was valued at $125,000, but at the end of the five years it is worth only $100,000. *H* has taken no money out of the business in the five years. During the same period of time other similar businesses of about the same size and character have declined about forty per cent in value, so that a business valued at $125,000 five years ago would now be worth $75,000. During the marriage *H* had the opportunity to give up his position with the business and take another job at a salary of $10,000 a year. Under these facts, *W* initially could argue that the business would be worth less than $100,000 had it not been for *H* contributing his efforts, and that the community is therefore entitled to some portion of its value. This contention is supported by the showing of decrease in value of other businesses. Moreover, had *H* hired someone else in his place, the $100,000 would be diminished at least by the salary paid to such other person.

The foregoing might be said to force *H* to choose between taking another job or having his business lose its separate character. However, while it is true that *H* has the power to choose the mode of living during marriage, and to manage the community assets, his skill is an asset that belongs to the community, and the community is entitled to whatever value it reaps. *H* should not be able to deprive the community of the value of his skill used to keep his separate estate intact any more than he could otherwise improve his separate property with com-

---

331 Since the impression was that the separate property was entitled to a reasonable interest return even if that consumed all the profits, see text following note 292 *supra*, where there was no profit at all it would follow from such reasoning that the community likewise gained no interest.

332 See text following note 292 *supra*.

munity funds.\textsuperscript{338} Similarly, just as $H$ is not entitled to give away community property without receiving consideration,\textsuperscript{339} he should not be allowed to give his services to the business without having the community receive some compensation. No matter what apportionment theory is applied it is clear that the community should be entitled to some amount.

A variation of the foregoing hypothetical illustrates a situation wherein the community’s interest in a losing business is even more apparent. Suppose that during the first two years of marriage the business grew to a value of $200,000, while other similar businesses grew at some rate less than this. If the marriage were to be terminated at this point, the community would clearly have some interest in the successful business, which could be apportioned as suggested above. If, however, the divorce occurs three years later, at a time when $H$’s business has dropped to a value of $100,000, while most other similar businesses have become bankrupt, how is the property to be apportioned? Does the community lose the interest it had in the business because the divorce, or perhaps the death of $H$, occurs at a time when the value of the business has dipped below the value at the time of marriage? It would seem clear that whatever community interest was created while the business was successful should in some manner continue until the time of the dissolution of the marriage.\textsuperscript{340} In deciding what the value of the community interest is, no single factor should be controlling. The cost of hiring someone in $H$’s place, the amount of job offers to $H$, and the general extent of decline in the industry should all be weighed.

The major change in applying the suggested framework to a losing business would have to be with regard to the initial burden of proof. Inasmuch as the business would not appear initially to be property acquired during marriage, it would not be readily subjected to the basic presumption of community property. Therefore, $W$ would have to bear the burden of showing that $H$’s services had some value to the business. Once $W$ has carried this burden, $H$ should have to show what part of the business would have remained intact even had he not worked in it. He would clearly be in the best position to produce this type of evidence, and preserving the basic presumption to this extent would not seem unjustified once the wife has connected the husband’s efforts to the business.

$W$ could establish the significance of the husband’s efforts by showing the much larger decline in other similar businesses. Evidence regarding the type of business, nature of $H$’s duties, and importance of capital could also be used in this respect.

\textsuperscript{339} CAL. CIV. CODE §§ 172, 172a; see Union Mut. Life Ins. Co. v. Broderick, 196 Cal. 497, 238 Pac. 1034 (1925).

\textsuperscript{340} As to valuation of the community’s interest, it would seem too harsh to conclude that the community should not in some way bear part of the decline in the value of the business. If it is found that the community interest after the first two years was $100,000, there would be nothing left for the separate estate at the end of the five year period if the community is not affected by the decline. Perhaps a better way to express the community’s interest in the business would be to determine at the end of each year the proportion of the value of the husband’s services in relation to the total value of the business. Such percentage could be established for each year that the husband does not withdraw a salary corresponding to the value of his services, with the community’s percentage interest then being traced through the ensuing years in effect as an investment in the separate business. Thus, for example, if after the first two years the community has acquired a 50% interest in the business, the decline during the next three years would be shared half by the community. This is without considering any further interest acquired by the community for the value of $H$’s services during these three years.
Once H's connection is shown, it could be presumed that the business would have declined in value at about the same rate as the other businesses, with the burden resting on H to prove that his separate estate is entitled to a greater valuation. He could show this, for example, by evidence of the comparative situation of his business in the industry before marriage. If he had built up goodwill prior to marriage, and his business was generally superior in the industry, it could be established that his business would not have dropped in accordance with others. To the extent that H proves his business to have a higher earning power than the general industry, the value of the business would be apportioned as separate property.

CONCLUSION

The problem of apportioning profits between the community and separate estates could be completely avoided by a constitutional amendment conforming to the original Act of 1850, 341 thereby overruling George v. Ransom and making the rents and profits of separate property all community property. 342 However, such reform does not appear forthcoming; therefore, a method for apportionment must be formulated by which the trial courts can proceed rationally to determine the conflicting interests.

It must be realized that the underlying presumption of the community property system is that whatever is earned or acquired by the spouses during marriage belongs to the community. 343 The introduction of the common law influence in George v. Ransom admittedly has made a basic change in this system. If, however, this change is to result in situations where long years of marriage can terminate with no community property having been acquired, 344 then the purpose of the community system will have been defeated. 345 While it is perhaps easy to understand the deviations from community property law in the early years, the courts in recent times have shown a better understanding of the community property system. Nevertheless, the principles used today in attempting to deal with the complex problem of apportionment are the same ones that developed from the early misunderstanding of the community property system which gave rise to the problem. If a solution is to be found, it must result from a full understanding of the past and a realization that the early cases can no more furnish an answer to the problem than did the George decision in creating it.

While it might be best to depart from existing case law where necessary to design a new approach to apportionment based on fundamental principles of community property law, such development may not be readily expected. Nevertheless, if the present system is to be retained, it is hoped that rational guidelines will be established to prevent random application of the two arbitrary and divergent approaches to apportionment which still confront us.
